KING OF PRUSSIA^a

CHARLES FREDERICK, the present king of Prussia, whose actions and designs now keep Europe in attention, is the eldest son of Frederick William, by Sophia Dorothea, daughter of George the first, king of England. He was born January 24, 1711-12. Of his early years nothing remarkable has been transmitted to us. As he advanced towards manhood, he became remarkable by his disagreement with his father.

The late king of Prussia was of a disposition violent and arbitrary, of narrow views, and vehement passions, earnestly engaged in little pursuits, or in schemes terminating in some speedy consequence, without any plan of lasting advantage to himself or his subjects, or any prospect of distant events. He was, therefore, always busy, though no effects of his activity ever appeared, and always eager, though he had nothing to gain. His behaviour was, to the last degree, rough and savage. The least provocation, whether designed or accidental, was returned by blows, which he did not always forbear to the queen and princesses.

From such a king and such a father it was not any enormous violation of duty in the immediate heir of a kingdom, sometimes to differ in opinion, and to maintain that difference with decent pertinacity. A prince of a quick sagacity and comprehensive knowledge, must find many practices in the conduct of affairs which he could not approve, and some which he could scarcely forbear to oppose.

The chief pride of the old king was to be master

^a First printed in the *Literary Magazine* for 1756.

KING OF PRUSSIA

of the tallest regiment in Europe. He, therefore, brought together, from all parts, men above the common military standard. To exceed the height of six feet, was a certain recommendation to notice, and to approach that of seven, a claim to distinction. Men will readily go where they are sure to be caressed; and he had, therefore, such a collection of giants, as, perhaps, was never seen in the world before.

To review this towering regiment was his daily pleasure, and to perpetuate it was so much his care, that when he met a tall woman, he immediately commanded one of his Titanian retinue to marry her, that they might propagate procerity, and produce heirs to the father's habiliments.

In all this there was apparent folly, but there was no crime. The tall regiment made a fine show at an expense not much greater, when once it was collected, than would have been bestowed upon common men. But the king's military pastimes were sometimes more pernicious. He maintained a numerous army, of which he made no other use than to review and to talk of it; and when he, or perhaps his emissaries, saw a boy, whose form and sprightliness promised a future soldier, he ordered a kind of badge to be put about his neck, by which he was marked out for the service, like the sons of christian captives in Turkey; and his parents were forbidden to destine him to any other mode of life.

This was sufficiently oppressive, but this was not the utmost of his tyranny. He had learned, though otherwise perhaps no very great politician, that to be rich was to be powerful; but that the riches of a

KING OF PRUSSIA

king ought to be seen in the opulence of his subjects, he wanted either ability or benevolence to understand. He, therefore, raised exorbitant taxes from every kind of commodity and possession, and piled up the money in his treasury, from which it issued no more. How the land which had paid taxes once, was to pay them a second time, how imposts could be levied without commerce, or commerce continued without money, it was not his custom to inquire. Eager to snatch at money, and delighted to count it, he felt new joy at every receipt, and thought himself enriched by the impoverishment of his dominions.

By which of these freaks of royalty the prince was offended, or whether, as perhaps more frequently happens, the offences of which he complains were of a domestick and personal kind, it is not easy to discover. But his resentment, whatever was its cause, rose so high that he resolved not only to leave his father's court, but his territories, and to seek a refuge among the neighbouring or kindred princes. It is generally believed that his intention was to come to England, and live under the protection of his uncle, till his father's death, or change of conduct, should give him liberty to return.

His design, whatever it was, he concerted with an officer in the army, whose name was Kat, a man in whom he placed great confidence, and whom, having chosen him for the companion of his flight, he necessarily trusted with the preparatory measures. A prince cannot leave his country with the speed of a meaner fugitive. Something was to be

KING OF PRUSSIA

provided, and something to be adjusted. And, whether Kat found the agency of others necessary, and, therefore, was constrained to admit some partners of the secret; whether levity or vanity incited him to disburden himself of a trust that swelled in his bosom, or to show to a friend or mistress his own importance; or whether it be in itself difficult for princes to transact any thing in secret; so it was, that the king was informed of the intended flight, and the prince, and his favourite, a little before the time settled for their departure, were arrested, and confined in different places.

The life of princes is seldom in danger, the hazard of their irregularities falls only on those whom ambition or affection combines with them. The king, after an imprisonment of some time, set his son at liberty; but poor Kat was ordered to be tried for a capital crime. The court examined the cause, and acquitted him: the king remanded him to a second trial, and obliged his judges to condemn him. In consequence of the sentence thus tyrannically extorted, he was publicly beheaded, leaving behind him some papers of reflections made in the prison, which were afterwards printed, and among others an admonition to the prince, for whose sake he suffered, not to foster in himself the opinion of destiny, for that a providence is discoverable in every thing round us.

This cruel prosecution of a man who had committed no crime, but by compliance with influence not easily to be resisted, was not the only act by which the old king irritated his son. A lady with

KING OF PRUSSIA

whom the prince was suspected of intimacy, perhaps more than virtue allowed, was seized, I know not upon what accusation, and, by the king's order, notwithstanding all the reasons of decency and tenderness that operate in other countries, and other judicatures, was publickly whipped in the streets of Berlin.

At last, that the prince might feel the power of a king and a father in its utmost rigour, he was, in 1733, married against his will to the princess Elizabetha Christina of Brunswick Luneburg Beveren. He married her indeed at his father's command, but without professing for her either esteem or affection, and considering the claim of parental authority fully satisfied by the external ceremony, obstinately and perpetually, during the life of his father, refrained from her bed. The poor princess lived about seven years in the court of Berlin, in a state which the world has not often seen, a wife without a husband, married so far as to engage her person to a man who did not desire her affection, and of whom it was doubtful, whether he thought himself restrained from the power of repudiation by an act performed under evident compulsion.

Thus he lived secluded from publick business, in contention with his father, in alienation from his wife. This state of uneasiness he found the only means of softening. He diverted his mind from the scenes about him, by studies and liberal amusements. The studies of princes seldom produce great effects, for princes draw with meaner mortals the lot of understanding; and since of many students

KING OF PRUSSIA

not more than one can be hoped to advance far towards perfection, it is scarcely to be expected that we should find that one a prince; that the desire of science should overpower in any mind the love of pleasure, when it is always present, or always within call; that laborious meditation should be preferred in the days of youth to amusements and festivity; or that perseverance should press forward in contempt of flattery; and that he, in whom moderate acquisitions would be extolled as prodigies, should exact from himself that excellence of which the whole world conspires to spare him the necessity.

In every great performance, perhaps in every great character, part is the gift of nature, part the contribution of accident, and part, very often not the greatest part, the effect of voluntary election, and regular design. The king of Prussia was undoubtedly born with more than common abilities; but that he has cultivated them with more than common diligence, was probably the effect of his peculiar condition, of that which he then considered as cruelty and misfortune.

In this long interval of unhappiness and obscurity, he acquired skill in the mathematical sciences, such as is said to have put him on the level with those who have made them the business of their lives. This is, probably, to say too much: the acquisitions of kings are always magnified. His skill in poetry and in the French language has been loudly praised by Voltaire, a judge without exception, if his honesty were equal to his knowledge.

KING OF PRUSSIA

Musick he not only understands, but practises on the German flute, in the highest perfection; so that, according to the regal censure of Philip of Macedon, he may be ashamed to play so well.

He may be said to owe to the difficulties of his youth an advantage less frequently obtained by princes than literature and mathematicks. The necessity of passing his time without pomp, and of partaking of the pleasures and labours of a lower station, made him acquainted with the various forms of life, and with the genuine passions, interests, desires, and distresses, of mankind. Kings, without this help from temporary infelicity, see the world in a mist, which magnifies every thing near them, and bounds their view to a narrow compass, which few are able to extend by the mere force of curiosity. I have always thought that what Cromwell had more than our lawful kings, he owed to the private condition in which he first entered the world, and in which he long continued: in that state he learned his art of secret transaction, and the knowledge by which he was able to oppose zeal to zeal, and make one enthusiast destroy another.

The king of Prussia gained the same arts, and, being born to fairer opportunities of using them, brought to the throne the knowledge of a private man, without the guilt of usurpation. Of this general acquaintance with the world there may be found some traces in his whole life. His conversation is like that of other men upon common topicks, his letters have an air of familiar elegance, and his whole conduct is that of a man who has to do with men,

KING OF PRUSSIA

and who is not ignorant what motives will prevail over friends or enemies.

In 1740, the old king fell sick, and spoke and acted in his illness with his usual turbulence and roughness, reproaching his physicians, in the grossest terms, with their unskilfulness and impotence, and imputing to their ignorance or wickedness the pain which their prescriptions failed to relieve. These insults they bore with the submission which is commonly paid to despotick monarchs; till at last the celebrated Hoffman was consulted, who failing, like the rest, to give ease to his majesty, was, like the rest, treated with injurious language. Hoffman, conscious of his own merit, replied, that he could not bear reproaches which he did not deserve; that he had tried all the remedies that art could supply, or nature could admit; that he was, indeed, a professor by his majesty's bounty; but that, if his abilities or integrity were doubted, he was willing to leave, not only the university, but the kingdom; and that he could not be driven into any place where the name of Hoffman would want respect. The king, however unaccustomed to such returns, was struck with conviction of his own indecency, told Hoffman, that he had spoken well, and requested him to continue his attendance.

The king, finding his distemper gaining upon his strength, grew at last sensible that his end was approaching, and, ordering the prince to be called to his bed, laid several injunctions upon him, of which one was to perpetuate the tall regiment by continual recruits, and another, to receive his espoused wife.

KING OF PRUSSIA

The prince gave him a respectful answer, but wisely avoided to diminish his own right or power by an absolute promise; and the king died uncertain of the fate of the tall regiment.

The young king began his reign with great expectations, which he has yet surpassed. His father's faults produced many advantages to the first years of his reign. He had an army of seventy thousand men well disciplined, without any imputation of severity to himself, and was master of a vast treasure without the crime or reproach of raising it. It was publicly said in our house of commons, that he had eight millions sterling of our money; but, I believe, he that said it had not considered how difficultly eight millions would be found in all the Prussian dominions. Men judge of what they do not see by that which they see. We are used to talk in England of millions with great familiarity, and imagine that there is the same affluence of money in other countries, in countries whose manufactures are few, and commerce little.

Every man's first cares are necessarily domestick. The king, being now no longer under influence, or its appearance, determined how to act towards the unhappy lady who had possessed, for seven years, the empty title of the princess of Prussia. The papers of those times exhibited the conversation of their first interview; as if the king, who plans campaigns in silence, would not accommodate a difference with his wife, but with writers of news admitted as witnesses. It is certain that he received her as queen; but whether he treats her as a wife is yet in dispute.

KING OF PRUSSIA

In a few days his resolution was known with regard to the tall regiment; for some recruits being offered him, he rejected them; and this body of giants, by continued disregard, mouldered away.

He treated his mother with great respect, ordered that she should bear the title of *queen mother*, and that, instead of addressing him as *his majesty*, she should only call him *son*.

As he was passing soon after between Berlin and Potsdam, a thousand boys, who had been marked out for military service, surrounded his coach, and cried out: "merciful king! deliver us from our slavery." He promised them their liberty, and ordered, the next day, that the badge should be taken off.

He still continued that correspondence with learned men which he began when he was prince; and the eyes of all scholars, a race of mortals formed for dependence, were upon him, as a man likely to renew the times of patronage, and to emulate the bounties of Lewis the fourteenth.

It soon appeared that he was resolved to govern with very little ministerial assistance: he took cognizance of every thing with his own eyes; declared, that in all contrarieties of interest between him and his subjects, the publick good should have the preference; and, in one of the first exertions of regal power, banished the prime minister and favourite of his father, as one that had "betrayed his master, and abused his trust."

He then declared his resolution to grant a general toleration of religion, and, among other liber-

KING OF PRUSSIA

alities of concession, allowed the profession of free-masonry. It is the great taint of his character, that he has given reason to doubt, whether this toleration is the effect of charity or indifference, whether he means to support good men of every religion, or considers all religions as equally good.

There had subsisted, for some time, in Prussia, an order called the "order for favour," which, according to its denomination, had been conferred with very little distinction. The king instituted the "order for merit," with which he honoured those whom he considered as deserving. There were some who thought their merit not sufficiently recompensed by this new title; but he was not very ready to grant pecuniary rewards. Those who were most in his favour he sometimes presented with snuff-boxes, on which was inscribed, "Amitié augmente le prix."

He was, however, charitable, if not liberal, for he ordered the magistrates of the several districts to be very attentive to the relief of the poor; and, if the funds established for that use were not sufficient, permitted that the deficiency should be supplied out of the revenues of the town.

One of his first cares was the advancement of learning. Immediately upon his accession, he wrote to Rollin and Voltaire, that he desired the continuance of their friendship; and sent for Mr. Maupertuis, the principal of the French academicians, who passed a winter in Lapland, to verify, by the mensuration of a degree near the pole, the Newtonian doctrine of the form of the earth. He requested of

KING OF PRUSSIA

Maupertuis to come to Berlin, to settle an academy, in terms of great ardour and great condescension.

At the same time, he showed the world that literary amusements were not likely, as has more than once happened to royal students, to withdraw him from the care of the kingdom, or make him forget his interest. He began by reviving a claim to Herstal and Hermal, two districts in the possession of the bishop of Liege. When he sent his commissary to demand the homage of the inhabitants, they refused him admission, declaring that they acknowledged no sovereign but the bishop. The king then wrote a letter to the bishop, in which he complained of the violation of his right, and the contempt of his authority, charged the prelate with countenancing the late act of disobedience, and required an answer in two days.

In three days the answer was sent, in which the bishop founds his claim to the two lordships, upon a grant of Charles the fifth, guaranteed by France and Spain; alleges that his predecessors had enjoyed this grant above a century, and that he never intended to infringe the rights of Prussia; but as the house of Brandenburg had always made some pretensions to that territory, he was willing to do what other bishops had offered, to purchase that claim for a hundred thousand crowns.

To every man that knows the state of the feudal countries, the intricacy of their pedigrees, the confusion of their alliances, and the different rules of inheritance that prevail in different places, it will appear evident, that of reviving antiquated claims

KING OF PRUSSIA

there can be no end, and that the possession of a century is a better title than can commonly be produced. So long a prescription supposes an acquiescence in the other claimants; and that acquiescence supposes also some reason, perhaps now unknown, for which the claim was forborne. Whether this rule could be considered as valid in the controversy between these sovereigns, may, however, be doubted, for the bishop's answer seems to imply, that the title of the house of Brandenburg had been kept alive by repeated claims, though the seizure of the territory had been hitherto foreborne.

The king did not suffer his claim to be subjected to any altercations, but, having published a declaration, in which he charged the bishop with violence and injustice, and remarked that the feudal laws allowed every man, whose possession was withheld from him, to enter it with an armed force, he immediately despatched two thousand soldiers into the controverted countries, where they lived without control, exercising every kind of military tyranny, till the cries of the inhabitants forced the bishop to relinquish them to the quiet government of Prussia.

This was but a petty acquisition; the time was now come when the king of Prussia was to form and execute greater designs. On the 9th of October, 1740, half Europe was thrown into confusion by the death of Charles the sixth, emperor of Germany, by whose death all the hereditary dominions of the house of Austria descended, according to the pragmattick sanction, to his eldest daughter, who

KING OF PRUSSIA

was married to the duke of Lorrain, at the time of the emperor's death, duke of Tuscany.

By how many securities the pragmatick sanction was fortified, and how little it was regarded when those securities became necessary; how many claimants started up at once to the several dominions of the house of Austria; how vehemently their pretensions were enforced, and how many invasions were threatened or attempted; the distresses of the emperor's daughter, known for several years by the title only of the queen of Hungary, because Hungary was the only country to which her claim had not been disputed: the firmness with which she struggled with her difficulties, and the good fortune by which she surmounted them; the narrow plan of this essay will not suffer me to relate. Let them be told by some other writer of more leisure and wider intelligence.

Upon the emperor's death, many of the German princes fell upon the Austrian territories, as upon a dead carcass, to be dismembered among them without resistance. Among these, with whatever justice, certainly with very little generosity, was the king of Prussia, who, having assembled his troops, as was imagined, to support the pragmatick sanction, on a sudden entered Silesia with thirty thousand men, publishing a declaration, in which he disclaims any design of injuring the rights of the house of Austria, but urges his claim to Silesia, as rising "from ancient conventions of family and confraternity between the house of Brandenburg and the princes of Silesia, and other honourable titles."

KING OF PRUSSIA

He says, the fear of being defeated by other pretenders to the Austrian dominions, obliged him to enter Silesia without any previous expostulation with the queen, and that he shall “strenuously espouse the interests of the house of Austria.”

Such a declaration was, I believe, in the opinion of all Europe, nothing less than the aggravation of hostility by insult, and was received by the Austrians with suitable indignation. The king pursued his purpose, marched forward, and in the frontiers of Silesia made a speech to his followers, in which he told them, that he considered them rather “as friends than subjects, that the troops of Brandenburg had been always eminent for their bravery, that they would always fight in his presence, and that he would recompense those who should distinguish themselves in his service, rather as a father than as a king.”

The civilities of the great are never thrown away. The soldiers would naturally follow such a leader with alacrity; especially because they expected no opposition: but human expectations are frequently deceived.

Entering thus suddenly into a country which he was supposed rather likely to protect than to invade, he acted for some time with absolute authority; but, supposing that this submission would not always last, he endeavoured to persuade the queen to a cession of Silesia, imagining that she would easily be persuaded to yield what was already lost. He, therefore, ordered his minister to declare, at Vienna, “that he was ready to guarantee all the German

KING OF PRUSSIA

dominions of the house of Austria; that he would conclude a treaty with Austria, Russia, and the maritime powers; that he would endeavour that the duke of Lorraine should be elected emperor, and believed that he could accomplish it; that he would immediately advance to the queen two millions of florins; that, in recompense for all this, he required Silesia to be yielded to him.”

These seem not to be the offers of a prince very much convinced of his own right. He afterwards moderated his claim, and ordered his minister to hint at Vienna, that half of Silesia would content him.

The queen answered, that though the king alleged, as his reason for entering Silesia, the danger of the Austrian territories from other pretenders, and endeavoured to persuade her to give up part of her possessions for the preservation of the rest, it was evident that he was the first and only invader, and that, till he entered in a hostile manner, all her estates were unmolested.

To his promises of assistance she replied, “that she set a high value on the king of Prussia’s friendship; but that he was already obliged to assist her against her invaders, both by the golden bull, and the pragmatick sanction, of which he was a guarantee, and that, if these ties were of no force she knew not what to hope from other engagements.”

Of his offers of alliances with Russia and the maritime powers, she observed, that it could be never fit to alienate her dominions for the consolidation of an alliance formed only to keep them entire.

KING OF PRUSSIA

With regard to his interest in the election of an emperour, she expressed her gratitude in strong terms; but added, that the election ought to be free, and that it must be necessarily embarrassed by contentions thus raised in the heart of the empire. Of the pecuniary assistance proposed, she remarks, that no prince ever made war to oblige another to take money, and that the contributions already levied in Silesia exceed the two millions, offered as its purchase.

She concluded, that as she values the king's friendship, she was willing to purchase it by any compliance but the diminution of her dominions, and exhorted him to perform his part in support of the pragmatick sanction.

The king, finding negotiation thus ineffectual, pushed forward his inroads, and now began to show how secretly he could take his measures. When he called a council of war, he proposed the question in a few words: all his generals wrote their opinions in his presence upon separate papers, which he carried away, and, examining them in private, formed his resolution, without imparting it otherwise than by his orders.

He began not without policy, to seize first upon the estates of the clergy, an order every where necessary, and every where envied. He plundered the convents of their stores of provision; and told them, that he never had heard of any magazines erected by the apostles.

This insult was mean, because it was unjust; but those who could not resist were obliged to bear it.

KING OF PRUSSIA

He proceeded in his expedition; and a detachment of his troops took Jablunca, one of the strong places of Silesia, which was soon after abandoned, for want of provisions, which the Austrian hussars, who were now in motion, were busy to interrupt.

One of the most remarkable events of the Silesia war, was the conquest of great Glogau, which was taken by an assault in the dark, headed by prince Leopold of Anhalt Dessau. They arrived at the foot of the fortifications about twelve at night, and in two hours were masters of the place. In attempts of this kind many accidents happen which cannot be heard without surprise. Four Prussian grenadiers, who had climbed the ramparts, missing their own company, met an Austrian captain with fifty-two men: they were at first frightened, and were about to retreat; but, gathering courage, commanded the Austrians to lay down their arms, and in the terour of darkness and confusion were unexpectedly obeyed.

At the same time a conspiracy to kill or carry away the king of Prussia, was said to be discovered. The Prussians published a memorial, in which the Austrian court was accused of employing emissaries and assassins against the king; and it was alleged, in direct terms, that one of them had confessed himself obliged, by oath, to destroy him, which oath had been given him in an Aulick council, in the presence of the duke of Lorrain.

To this the Austrians answered, “that the character of the queen and duke was too well known not to destroy the force of such an accusation; that

KING OF PRUSSIA

the tale of the confession was an imposture, and that no such attempt was ever made.”

Each party was now inflamed, and orders were given to the Austrian general to hazard a battle. The two armies met at Molwitz, and parted without a complete victory on either side. The Austrians quitted the field in good order; and the king of Prussia rode away upon the first disorder of his troops, without waiting for the last event. This attention to his personal safety has not yet been forgotten.

After this, there was no action of much importance. But the king of Prussia, irritated by opposition, transferred his interest in the election to the duke of Bavaria; and the queen of Hungary, now attacked by France, Spain, and Bavaria, was obliged to make peace with him at the expense of half Silesia, without procuring those advantages which were once offered her.

To enlarge dominions has been the boast of many princes; to diffuse happiness and security through wide regions has been granted to few. The king of Prussia has aspired to both these honours, and endeavoured to join the praise of legislator to that of conqueror.

To settle property, to suppress false claims, and to regulate the administration of civil and criminal justice, are attempts so difficult and so useful, that I shall willingly suspend or contract the history of battles and sieges, to give a larger account of this pacifick enterprise.

That the king of Prussia has considered the na-

KING OF PRUSSIA

ture and the reasons of laws, with more attention than is common to princes, appears from his dissertation on the Reasons for enacting and repealing Laws: a piece which yet deserves notice, rather as a proof of good inclination than of great ability; for there is nothing to be found in it more than the most obvious books may supply, or the weakest intellect discover. Some of his observations are just and useful; but upon such a subject who can think without often thinking right? It is, however, not to be omitted, that he appears always propense towards the side of mercy. "If a poor man," says he, "steals in his want a watch, or a few pieces, from one to whom the loss is inconsiderable, is this a reason for condemning him to death?"

He regrets that the laws against duels have been ineffectual; and is of opinion, that they can never attain their end, unless the princes of Europe shall agree not to afford an asylum to duellists, and to punish all who shall insult their equals, either by word, deed, or writing. He seems to suspect this scheme of being chimerical. "Yet why," says he, "should not personal quarrels be submitted to judges, as well as questions of possession? and why should not a congress be appointed for the general good of mankind, as well as for so many purposes of less importance?"

He declares himself with great ardour against the use of torture, and by some misinformation charges the English that they still retain it.

It is, perhaps, impossible to review the laws of any country without discovering many defects and

KING OF PRUSSIA

many superfluities. Laws often continue, when their reasons have ceased. Laws made for the first state of the society continue unabolished, when the general form of life is changed. Parts of the judicial procedure, which were, at first, only accidental, become, in time, essential; and formalities are accumulated on each other, till the art of litigation requires more study than the discovery of right.

The king of Prussia, examining the institutions of his own country, thought them such as could only be amended by a general abrogation, and the establishment of a new body of law, to which he gave the name of the Code Frédérique, which is comprised in one volume of no great bulk, and must, therefore, unavoidably contain general positions to be accommodated to particular cases by the wisdom and integrity of the courts. To embarrass justice by multiplicity of laws, or to hazard it by confidence in judges, seem to be the opposite rocks on which all civil institutions have been wrecked, and between which legislative wisdom has never yet found an open passage.

Of this new system of laws, contracted as it is, a full account cannot be expected in these memoirs: but, that curiosity may not be dismissed without some gratification, it has been thought proper to epitomise the king's plan for the reformation of his courts.

“ The differences which arise between members of the same society, may be terminated by a voluntary agreement between the parties, by arbitration, or by a judicial process.

KING OF PRUSSIA

“The two first methods produce, more frequently, a temporary suspension of disputes than a final termination. Courts of justice are, therefore, necessary, with a settled method of procedure, of which the most simple is to cite the parties, to hear their pleas, and dismiss them with immediate decision.

“This, however, is, in many cases, impracticable, and in others is so seldom practised, that it is frequent rather to incur loss than to seek for legal reparation, by entering a labyrinth of which there is no end.

“This tediousness of suits keeps the parties in disquiet and perturbation, rouses and perpetuates animosities, exhausts the litigants by expense, retards the progress of their fortune, and discourages strangers from settling.

“These inconveniencies, with which the best-regulated polities of Europe are embarrassed, must be removed, not by the total prohibition of suits, which is impossible, but by contraction of processes; by opening an easy way for the appearance of truth, and removing all obstructions by which it is concealed.

“The ordonnance of 1667, by which Lewis the fourteenth established an uniformity of procedure through all his courts, has been considered as one of the greatest benefits of his reign.

“The king of Prussia, observing that each of his provinces had a different method of judicial procedure, proposed to reduce them all to one form; which being tried with success in Pomerania, a province remarkable for contention, he afterwards

KING OF PRUSSIA

extended to all his dominions, ordering the judges to inform him of any difficulties which arose from it.

“Some settled method is necessary in judicial procedures. Small and simple causes might be decided upon the oral pleas of the two parties appearing before the judge; but many cases are so entangled and perplexed as to require all the skill and abilities of those who devote their lives to the study of the law.

“Advocates, or men who can understand and explain the question to be discussed, are, therefore, necessary. But these men, instead of endeavouring to promote justice and discover truth, have exerted their wits in the defence of bad causes, by forgeries of facts, and fallacies of argument.

“To remedy this evil, the king has ordered an inquiry into the qualifications of the advocate. All those who practice without a regular admission, or who can be convicted of disingenuous practice, are discarded. And the judges are commanded to examine which of the causes now depending have been protracted by the crimes and ignorance of the advocates, and to dismiss those who shall appear culpable.

“When advocates are too numerous to live by honest practice, they busy themselves in exciting disputes, and disturbing the community: the number of these to be employed in each court is, therefore, fixed.

“The reward of the advocates is fixed with due regard to the nature of the cause, and the labour

KING OF PRUSSIA

required; but not a penny is received by them till the suit is ended, that it may be their interest, as well as that of the clients, to shorten the process.

“ No advocate is admitted in petty courts, small towns, or villages; where the poverty of the people, and, for the most part, the low value of the matter contested, make despatch absolutely necessary. In those places the parties shall appear in person, and the judge make a summary decision.

“ There must, likewise, be allowed a subordination of tribunals, and a power of appeal. No judge is so skilful and attentive as not sometimes to err. Few are so honest as not sometimes to be partial. Petty judges would become insupportably tyrannical if they were not restrained by the fear of a superiour judicature; and their decisions would be negligent or arbitrary if they were not in danger of seeing them examined and cancelled.

“ The right of appeal must be restrained, that causes may not be transferred without end from court to court; and a peremptory decision must, at last, be made.

“ When an appeal is made to a higher court, the appellant is allowed only four weeks to frame his bill, the judge of the lower court being to transmit to the higher all the evidences and informations. If, upon the first view of the cause thus opened, it shall appear that the appeal was made without just cause, the first sentence shall be confirmed without citation of the defendant. If any new evidence shall appear, or any doubts arise, both the parties shall be heard.

KING OF PRUSSIA

“In the discussion of causes altercation must be allowed; yet to altercation some limits must be put. There are, therefore, allowed a bill, an answer, a reply, and a rejoinder, to be delivered in writing.

“No cause is allowed to be heard in more than three different courts. To further the first decision, every advocate is enjoined, under severe penalties, not to begin a suit till he has collected all the necessary evidence. If the first court has decided in an unsatisfactory manner, an appeal may be made to the second, and from the second to the third. The process in each appeal is limited to six months. The third court may, indeed, pass an erroneous judgment; and then the injury is without redress. But this objection is without end, and, therefore, without force. No method can be found of preserving humanity from error; but of contest there must sometime be an end; and he, who thinks himself injured for want of an appeal to a fourth court, must consider himself as suffering for the publick.

“There is a special advocate appointed for the poor.

“The attorneys, who had formerly the care of collecting evidence, and of adjusting all the preliminaries of a suit, are now totally dismissed; the whole affair is put into the hands of the advocates, and the office of an attorney is annulled for ever.

“If any man is hindered by some lawful impediment from attending his suit, time will be granted him upon the representation of his case.”

Such is the order according to which civil justice is administered through the extensive dominions of

KING OF PRUSSIA

the king of Prussia; which, if it exhibits nothing very subtle or profound, affords one proof more that the right is easily discovered, and that men do not so often want ability to find, as willingness to practice it.

We now return to the war.

The time at which the queen of Hungary was willing to purchase peace by the resignation of Silesia, though it came at last, was not come yet. She had all the spirit, though not all the power of her ancestors, and could not bear the thought of losing any part of her patrimonial dominions to the enemies which the opinion of her weakness raised every where against her.

In the beginning of the year 1742, the elector of Bavaria was invested with the imperial dignity, supported by the arms of France, master of the kingdom of Bohemia; and confederated with the elector Palatine, and the elector of Saxony, who claimed Moravia; and with the king of Prussia, who was in possession of Silesia.

Such was the state of the queen of Hungary, pressed on every side, and on every side preparing for resistance: she yet refused all offers of accommodation, for every prince set peace at a price which she was not yet so far humbled as to pay.

The king of Prussia was among the most zealous and forward in the confederacy against her. He promised to secure Bohemia to the emperor, and Moravia to the elector of Saxony; and, finding no enemy in the field able to resist him, he returned

KING OF PRUSSIA

to Berlin, and left Schwerin, his general, to prosecute the conquest.

The Prussians, in the midst of winter, took Olmutz, the capital of Moravia, and laid the whole country under contribution. The cold then hindered them from action, and they only blocked up the fortresses of Brinn, and Spielberg.

In the spring, the king of Prussia came again into the field, and undertook the siege of Brinn; but, upon the approach of Prince Charles of Lorrain, retired from before it, and quitted Moravia, leaving only a garrison in the capital.

The condition of the queen of Hungary was now changed. She was, a few months before, without money, without troops, encircled with enemies. The Bavarians had entered Austria, Vienna was threatened with a siege, and the queen left it to the fate of war, and retired into Hungary, where she was received with zeal and affection, not unmingled, however, with that neglect which must always be borne by greatness in distress. She bore the disrespect of her subjects with the same firmness as the outrages of her enemies; and, at last, persuaded the English not to despair of her preservation, by not despairing herself.

Voltaire, in his late history, has asserted, that a large sum was raised for her succour, by voluntary subscriptions of the English ladies. It is the great failing of a strong imagination to catch greedily at wonders. He was misinformed, and was, perhaps, unwilling to learn, by a second inquiry, a truth less splendid and amusing. A contribution was, by news-

KING OF PRUSSIA

writers, upon their own authority, fruitlessly, and, I think, illegally proposed. It ended in nothing. The parliament voted a supply, and five hundred thousand pounds were remitted to her.

It has been always the weakness of the Austrian family to spend in the magnificence of empire, those revenues which should be kept for its defence. The court is splendid, but the treasury is empty; and, at the beginning of every war, advantages are gained against them, before their armies can be assembled and equipped.

The English money was to the Austrians, as a shower to a field, where all the vegetative powers are kept unactive by a long continuance of drought. The armies, which had hitherto been hid in mountains and forests, started out of their retreats; and, wherever the queen's standard was erected, nations scarcely known by their names, swarmed immediately about it. An army, especially a defensive army, multiplies itself. The contagion of enterprise spreads from one heart to another. Zeal for a native, or detestation of a foreign sovereign, hope of sudden greatness or riches, friendship or emulation between particular men, or, what are perhaps more general and powerful, desire of novelty and impatience of inactivity, fill a camp with adventurers, add rank to rank, and squadron to squadron.

The queen had still enemies on every part, but she now, on every part, had armies ready to oppose them. Austria was immediately recovered; the plains of Bohemia were filled with her troops, though the fortresses were garrisoned by the French.

KING OF PRUSSIA

The Bavarians were recalled to the defence of their own country, now wasted by the incursions of troops that were called barbarians, greedy enough of plunder, and daring, perhaps, beyond the rules of war, but otherwise not more cruel than those whom they attacked. Prince Lobkowitz, with one army, observed the motions of Broglio, the French general, in Bohemia; and prince Charles with another, put a stop to the advances of the king of Prussia.

It was now the turn of the Prussians to retire. They abandoned Olmutz, and left behind them part of their cannon and their magazines. And the king, finding that Broglio could not long oppose prince Lobkowitz, hastened into Bohemia to his assistance; and having received a reinforcement of twenty-three thousand men, and taken the castle of Glatz, which, being built upon a rock scarcely accessible, would have defied all his power, had the garrison been furnished with provisions, he purposed to join his allies, and prosecute his conquests.

Prince Charles, seeing Moravia thus evacuated by the Prussians, determined to garrison the towns which he had just recovered, and pursue the enemy, who, by the assistance of the French, would have been too powerful for prince Lobkowitz.

Success had now given confidence to the Austrians, and had proportionably abated the spirit of their enemies. The Saxons, who had cooperated with the king of Prussia in the conquest of Moravia, of which they expected the perpetual possession, seeing all hopes of sudden acquisition defeated, and

KING OF PRUSSIA

the province left again to its former masters, grew weary of following a prince, whom they considered as no longer acting the part of their confederate; and when they approached the confines of Bohemia took a different road, and left the Prussians to their own fortune.

The king continued his march, and Charles his pursuit. At Czaslau the two armies came in sight of one another, and the Austrians resolved on a decisive day. On the 6th of May, about seven in the morning, the Austrians began the attack: their impetuosity was matched by the firmness of the Prussians. The animosity of the two armies was much inflamed: the Austrians were fighting for their country, and the Prussians were in a place, where defeat must inevitably end in death or captivity. The fury of the battle continued four hours: the Prussian horse were, at length, broken, and the Austrians forced their way to the camp, where the wild troops, who had fought with so much vigour and constancy, at the sight of plunder forgot their obedience, nor had any man the least thought but how to load himself with the richest spoils.

While the right wing of the Austrians was thus employed, the main body was left naked: the Prussians recovered from their confusion, and regained the day. Charles was, at last, forced to retire, and carried with him the standards of his enemies, the proofs of a victory, which, though so nearly gained, he had not been able to keep.

The victory, however, was dearly bought; the

KING OF PRUSSIA

Prussian army was much weakened, and the cavalry almost totally destroyed. Peace is easily made when it is necessary to both parties; and the king of Prussia had now reason to believe that the Austrians were not his only enemies. When he found Charles advancing, he sent to Broglio for assistance, and was answered, that "he must have orders from Versailles." Such a desertion of his most powerful ally disconcerted him, but the battle was unavoidable.

When the Prussians were returned to the camp, the king, hearing that an Austrian officer was brought in mortally wounded, had the condescension to visit him. The officer, struck with this act of humanity, said, after a short conversation: "I should die, sir, contentedly after this honour, if I might first show my gratitude to your majesty by informing you with what allies you are now united, allies that have no intention but to deceive you." The king appearing to suspect this intelligence; "Sir," said the Austrian, "if you will permit me to send a messenger to Vienna, I believe the queen will not refuse to transmit an intercepted letter now in her hands, which will put my report beyond all doubt."

The messenger was sent, and the letter transmitted, which contained the order sent to Broglio, who was, first, forbidden to mix his troops on any occasion with the Prussians. Secondly, he was ordered to act always at a distance from the king. Thirdly, to keep always a body of twenty thousand men to observe the Prussian army. Fourthly, to observe very closely the motions of the king, for important reasons. Fifthly, to hazard nothing; but

KING OF PRUSSIA

to pretend want of reinforcements, or the absence of Bellisle.

The king now, with great reason, considered himself as disengaged from the confederacy, being deserted by the Saxons, and betrayed by the French; he, therefore, accepted the mediation of king George, and, in three weeks after the battle of Czaslaw, made peace with the queen of Hungary, who granted to him the whole province of Silesia, a country of such extent and opulence, that he is said to receive from it one third part of his revenues. By one of the articles of this treaty it is stipulated, "that neither should assist the enemies of the other."

The queen of Hungary, thus disentangled on one side, and set free from the most formidable of her enemies, soon persuaded the Saxons to peace; took possession of Bavaria; drove the emperour, after all his imaginary conquests, to the shelter of a neutral town, where he was treated as a fugitive; and besieged the French in Prague, in the city which they had taken from her.

Having thus obtained Silesia, the king of Prussia returned to his own capital, where he reformed his laws, forbade the torture of criminals, concluded a defensive alliance with England, and applied himself to the augmentation of his army.

This treaty of peace with the queen of Hungary was one of the first proofs given by the king of Prussia, of the secrecy of his counsels. Bellisle, the French general, was with him in the camp, as a friend and coadjutor in appearance, but in truth a

KING OF PRUSSIA

spy, and a writer of intelligence. Men who have great confidence in their own penetration are often by that confidence deceived; they imagine that they can pierce through all the involutions of intrigue, without the diligence necessary to weaker minds, and, therefore, sit idle and secure; they believe that none can hope to deceive them, and, therefore, that none will try. Bellisle, with all his reputation of sagacity, though he was in the Prussian camp, gave, every day, fresh assurances of the king's adherence to his allies; while Broglio, who commanded the army at a distance, discovered sufficient reason to suspect his desertion. Broglio was slighted, and Bellisle believed, till, on the 11th of June, the treaty was signed, and the king declared his resolution to keep ■ neutrality.

This is one of the great performances of polity which mankind seem agreed to celebrate and admire; yet, to all this nothing was necessary but the determination of a very few men to be silent.

From this time the queen of Hungary proceeded with an uninterrupted torrent of success. The French, driven from station to station, and deprived of fortress after fortress, were, at last, enclosed with their two generals, Bellisle and Broglio, in the walls of Prague, which they had stored with all provisions necessary to a town besieged, and where they defended themselves three months before any prospect appeared of relief.

The Austrians, having been engaged chiefly in the field, and in sudden and tumultuary excursions, rather than a regular war, had no great degree of

KING OF PRUSSIA

skill in attacking or defending towns. They, likewise, would naturally consider all the mischiefs done to the city, as falling, ultimately, upon themselves; and, therefore, were willing to gain it by time rather than by force.

It was apparent that, how long soever Prague might be defended, it must be yielded at last, and, therefore, all arts were tried to obtain an honourable capitulation. The messengers from the city were sent back, sometimes unheard, but always with this answer: "That no terms would be allowed, but that they should yield themselves prisoners of war."

The condition of the garrison was, in the eyes of all Europe, desperate; but the French, to whom the praise of spirit and activity cannot be denied, resolved to make an effort for the honour of their arms. Maillebois was at that time encamped with his army in Westphalia. Orders were sent him to relieve Prague. The enterprise was considered as romantick. Maillebois was a march of forty days distant from Bohemia, the passes were narrow, and the ways foul; and it was likely that Prague would be taken before he could reach it. The march was, however, begun: the army, being joined by that of count Saxe, consisted of fifty thousand men, who, notwithstanding all the difficulties which two Austrian armies could put in their way, at last entered Bohemia. The siege of Prague, though not raised, was remitted, and a communication was now opened to it with the country. But the Austrians, by perpetual intervention, hindered the garrison from joining their friends. The officers of Maillebois in-

KING OF PRUSSIA

cited him to a battle, because the army was hourly lessening by the want of provisions; but, instead of pressing on to Prague, he retired into Bavaria, and completed the ruin of the emperor's territories.

The court of France, disappointed and offended, conferred the chief command upon Broglio, who escaped from the besiegers with very little difficulty, and kept the Austrians employed till Bellisle, by a sudden sally, quitted Prague, and without any great loss joined the main army. Broglio then retired over the Rhine into the French dominions, wasting, in his retreat, the country which he had undertaken to protect, and burning towns, and destroying magazines of corn, with such wantonness, as gave reason to believe that he expected commendation from his court for any mischiefs done, by whatever means.

The Austrians pursued their advantages, recovered all their strong places, in some of which French garrisons had been left, and made themselves masters of Bavaria, by taking not only Munich, the capital, but Ingolstadt, the strongest fortification in the elector's dominions, where they found a great number of cannon and a quantity of ammunition, intended, in the dreams of projected greatness, for the siege of Vienna, all the archives of the state, the plate and ornaments of the electoral palace, and what had been considered as most worthy of preservation. Nothing but the warlike stores were taken away. An oath of allegiance to the queen was required of the Bavarians, but without any explanation, whether temporary or perpetual.

KING OF PRUSSIA

The emperor lived at Frankfort, in the security that was allowed to neutral places, but without much respect from the German princes, except that, upon some objections made by the queen to the validity of his election, the king of Prussia declared himself determined to support him in the imperial dignity, with all his power.

This may be considered as a token of no great affection to the queen of Hungary, but it seems not to have raised much alarm. The German princes were afraid of new broils. To contest the election of an emperor, once invested and acknowledged, would be to overthrow the whole Germanick constitution. Perhaps no election by plurality of suffrages was ever made among human beings, to which it might not be objected, that voices were procured by illicit influence.

Some suspicions, however, were raised by the king's declaration, which he endeavoured to obviate by ordering his ministers to declare at London and at Vienna, that he was resolved not to violate the treaty of Breslaw. This declaration was sufficiently ambiguous, and could not satisfy those whom it might silence. But this was not a time for nice disquisitions; to distrust the king of Prussia might have provoked him, and it was most convenient to consider him as a friend, till he appeared openly as an enemy.

About the middle of the year 1744, he raised new alarms by collecting his troops and putting them in motion. The earl of Hindford about this time demanded the troops stipulated for the protection of

KING OF PRUSSIA

Hanover; not, perhaps, because they were thought necessary, but that the king's designs might be guessed from his answer, which was, that troops were not granted for the defence of any country till that country was in danger, and that he could not believe the elector of Hanover to be in much dread of an invasion, since he had withdrawn the native troops, and put them into the pay of England.

He had, undoubtedly, now formed designs which made it necessary that his troops should be kept together, and the time soon came when the scene was to be opened. Prince Charles of Lorraine, having chased the French out of Bavaria, lay, for some months, encamped on the Rhine, endeavouring to gain a passage into Alsace. His attempts had long been evaded by the skill and vigilance of the French general, till, at last, June 21, 1744, he executed his design, and lodged his army in the French dominions, to the surprise and joy of a great part of Europe. It was now expected that the territories of France would, in their turn, feel the miseries of war; and the nation, which so long kept the world in alarm, be taught, at last, the value of peace.

The king of Prussia now saw the Austrian troops at a great distance from him, engaged in a foreign country, against the most powerful of all their enemies. Now, therefore, was the time to discover that he had lately made a treaty at Frankfort with the emperour, by which he had engaged, "that as the court of Vienna and its allies appeared backward to reestablish the tranquillity of the empire, and more

KING OF PRUSSIA

cogent methods appeared necessary; he, being animated with a desire of cooperating towards the pacification of Germany, should make an expedition for the conquest of Bohemia, and to put it into the possession of the emperour, his heirs and successours, for ever; in gratitude for which the emperour should resign to him and his successours a certain number of lordships, which are now part of the kingdom of Bohemia. His imperial majesty likewise guaranties to the king of Prussia the perpetual possession of upper Silesia; and the king guaranties to the emperour the perpetual possession of upper Austria, as soon as he shall have occupied it by conquest.”

It is easy to discover that the king began the war upon other motives than zeal for peace; and that, whatever respect he was willing to show to the emperour, he did not purpose to assist him without reward. In prosecution of this treaty he put his troops in motion; and, according to his promise, while the Austrians were invading France, he invaded Bohemia.

Princes have this remaining of humanity, that they think themselves obliged not to make war without a reason. Their reasons are, indeed, not always very satisfactory. Lewis the fourteenth seemed to think his own glory a sufficient motive for the invasion of Holland. The czar attacked Charles of Sweden, because he had not been treated with sufficient respect when he made a journey in disguise. The king of Prussia, having an opportunity of attacking his neighbour, was not long without his reasons.

KING OF PRUSSIA

On July 30th, he published his declaration, in which he declares:

“That he can no longer stand an idle spectator of the troubles in Germany, but finds himself obliged to make use of force to restore the power of the laws, and the authority of the emperor.

“That the queen of Hungary has treated the emperor’s hereditary dominions with inexpressible cruelty.

“That Germany has been overrun with foreign troops which have marched through neutral countries without the customary requisitions.

“That the emperor’s troops have been attacked under neutral fortresses, and obliged to abandon the empire, of which their master is the head.

“That the imperial dignity has been treated with indecency by the Hungarian troops.

“The queen, declaring the election of the emperor void, and the diet of Frankfort illegal, had not only violated the imperial dignity, but injured all the princes who have the right of election.

“That he had no particular quarrel with the queen of Hungary; and that he desires nothing for himself, and only enters as an auxiliary into a war for the liberties of Germany.

“That the emperor had offered to quit his pretension to the dominions of Austria, on condition that his hereditary countries be restored to him.

“That this proposal had been made to the king of England at Hanau, and rejected in such a manner as showed, that the king of England had no

KING OF PRUSSIA

intention to restore peace, but rather to make his advantage of the troubles.

“That the mediation of the Dutch had been desired; but that they declined to interpose, knowing the inflexibility of the English and Austrian courts.

“That the same terms were again offered at Vienna, and again rejected; that, therefore, the queen must impute it to her own councils, that her enemies find new allies.

“That he is not fighting for any interest of his own, that he demands nothing for himself; but is determined to exert all his powers in defence of the emperour, in vindication of the right of election, and in support of the liberties of Germany, which the queen of Hungary would enslave.”

When this declaration was sent to the Prussian minister in England, it was accompanied with a remonstrance to the king, in which many of the foregoing positions were repeated; the emperour's candour and disinterestedness were magnified; the dangerous designs of the Austrians were displayed; it was imputed to them, as the most flagrant violation of the Germanick constitution, that they had driven the emperour's troops out of the empire; the publick spirit and generosity of his Prussian majesty were again heartily declared; and it was said, that this quarrel having no connexion with English interests, the English ought not to interpose.

Austria and all her allies were put into amazement by this declaration, which, at once, dis-

KING OF PRUSSIA

mounted them from the summit of success, and obliged them to fight through the war a second time. What succours, or what promises, Prussia received from France, was never publickly known; but it is not to be doubted that a prince, so watchful of opportunity, sold assistance, when it was so much wanted, at the highest rate; nor can it be supposed that he exposed himself to so much hazard only for the freedom of Germany, and a few petty districts in Bohemia.

The French, who, from ravaging the empire at discretion, and wasting whatever they found either among enemies or friends, were now driven into their own dominions, and, in their own dominions, were insulted and pursued, were, on a sudden, by this new auxiliary, restored to their former superiority, at least were disburdened of their invaders, and delivered from their terrors. And all the enemies of the house of Bourbon saw, with indignation and amazement, the recovery of that power which they had, with so much cost and bloodshed, brought low, and which their animosity and elation had disposed them to imagine yet lower than it was.

The queen of Hungary still retained her firmness. The Prussian declaration was not long without an answer, which was transmitted to the European princes, with some observations on the Prussian minister's remonstrance to the court of Vienna, which he was ordered by his master to read to the Austrian council, but not to deliver. The same caution was practised before, when the Prussians, after the emperour's death, invaded Silesia. This

KING OF PRUSSIA

artifice of political debate may, perhaps, be numbered by the admirers of greatness among the refinements of conduct; but, as it is a method of proceeding not very difficult to be contrived or practised, as it can be of very rare use to honesty or wisdom, and as it has been long known to that class of men whose safety depends upon secrecy, though hitherto applied chiefly in petty cheats and slight transactions; I do not see that it can much advance the reputation of regal understanding, or, indeed, that it can add more to the safety, than it takes away from the honour of him that shall adopt it.

The queen, in her answer, after charging the king of Prussia with breach of the treaty of Breslaw, and observing how much her enemies will exult to see the peace now the third time broken by him, declares:

“That she had no intention to injure the rights of the electors, and that she calls in question not the event, but the manner of the election.

“That she has spared the emperour’s troops with great tenderness, and that they were driven out of the empire, only because they were in the service of France.

“That she is so far from disturbing the peace of the empire, that the only commotions now raised in it are the effect of the armaments of the king of Prussia.”

Nothing is more tedious than publick records, when they relate to affairs which, by distance of time or place, lose their power to interest the reader.

KING OF PRUSSIA

Every thing grows little, as it grows remote; and of things thus diminished, it is sufficient to survey the aggregate without a minute examination of the parts.

It is easy to perceive, that, if the king of Prussia's reasons be sufficient, ambition or animosity can never want a plea for violence and invasion. What he charges upon the queen of Hungary, the waste of country, the expulsion of the Bavarians, and the employment of foreign troops, is the unavoidable consequence of a war inflamed on either side to the utmost violence. All these grievances subsisted when he made the peace, and, therefore, they could very little justify its breach.

It is true, that every prince of the empire is obliged to support the imperial dignity, and assist the emperour, when his rights are violated. And every subsequent contract must be understood in a sense consistent with former obligations. Nor had the king power to make a peace on terms contrary to that constitution by which he held a place among the Germanick electors. But he could have easily discovered, that not the emperour, but the duke of Bavaria, was the queen's enemy; not the administrator of the imperial power, but the claimant of the Austrian dominions. Nor did his allegiance to the emperour, supposing the emperour injured, oblige him to more than a succour of ten thousand men. But ten thousand men could not conquer Bohemia, and without the conquest of Bohemia he could receive no reward for the zeal and fidelity which he so loudly professed.

KING OF PRUSSIA

The success of this enterprise he had taken all possible precaution to secure. He was to invade a country guarded only by the faith of treaties, and, therefore, left unarmed, and unprovided of all defence. He had engaged the French to attack prince Charles, before he should repass the Rhine, by which the Austrians would, at least, have been hindered from a speedy march into Bohemia: they were, likewise, to yield him such other assistance as he might want.

Relying, therefore, upon the promises of the French, he resolved to attempt the ruin of the house of Austria, and, in August, 1744, broke into Bohemia, at the head of a hundred and four thousand men. When he entered the country, he published a proclamation, promising, that his army should observe the strictest discipline, and that those who made no resistance should be suffered to remain in quiet in their habitations. He required that all arms, in the custody of whomsoever they might be placed, should be given up, and put into the hands of publick officers. He still declared himself to act only as an auxiliary to the emperour, and with no other design than to establish peace and tranquillity throughout Germany, his dear country.

In this proclamation there is one paragraph, of which I do not remember any precedent. He threatens, that, if any peasant should be found with arms, he shall be hanged without further inquiry; and that, if any lord shall connive at his vassals keeping arms in their custody, his village shall be reduced to ashes.

KING OF PRUSSIA

It is hard to find upon what pretence the king of Prussia could treat the Bohemians as criminals, for preparing to defend their native country, or maintaining their allegiance to their lawful sovereign against an invader, whether he appears principal or auxiliary, whether he professes to intend tranquillity or confusion.

His progress was such as gave great hopes to the enemies of Austria: like Cæsar, he conquered as he advanced, and met with no opposition, till he reached the walls of Prague. The indignation and resentment of the queen of Hungary may be easily conceived; the alliance of Frankfort was now laid open to all Europe; and the partition of the Austrian dominions was again publickly projected. They were to be shared among the emperour, the king of Prussia, the elector Palatine, and the landgrave of Hesse. All the powers of Europe who had dreamed of controlling France, were awakened to their former terrors; all that had been done was now to be done again; and every court, from the straits of Gibraltar to the Frozen sea, was filled with exultation or terror, with schemes of conquest, or precautions for defence.

The king, delighted with his progress, and expecting, like other mortals elated with success, that his prosperity could not be interrupted, continued his march, and began, in the latter end of September, the siege of Prague. He had gained several of the outer posts, when he was informed that the convoy, which attended his artillery, was attacked by an unexpected party of the Austrians. The king

KING OF PRUSSIA

went immediately to their assistance, with the third part of his army, and found his troops put to flight, and the Austrians hasting away with his cannons: such a loss would have disabled him at once. He fell upon the Austrians, whose number would not enable them to withstand him, recovered his artillery, and, having also defeated Bathiani, raised his batteries; and, there being no artillery to be placed against him, he destroyed a great part of the city. He then ordered four attacks to be made at once, and reduced the besieged to such extremities, that in fourteen days the governor was obliged to yield the place.

At the attack, commanded by Schwerin, a grenadier is reported to have mounted the bastion alone, and to have defended himself, for some time, with his sword, till his followers mounted after him; for this act of bravery, the king made him a lieutenant, and gave him a patent of nobility.

Nothing now remained but that the Austrians should lay aside all thought of invading France, and apply their whole power to their own defence. Prince Charles, at the first news of the Prussian invasion, prepared to repass the Rhine. This the French, according to their contract with the king of Prussia, should have attempted to hinder; but they knew, by experience, the Austrians would not be beaten without resistance, and that resistance always incommodes an assailant. As the king of Prussia rejoiced in the distance of the Austrians, whom he considered as entangled in the French territories; the French rejoiced in the necessity of

KING OF PRUSSIA

their return, and pleased themselves with the prospect of easy conquests, while powers, whom they considered with equal malevolence, should be employed in massacring each other.

Prince Charles took the opportunity of bright moonshine to repass the Rhine; and Noailles, who had early intelligence of his motions, gave him very little disturbance, but contented himself with attacking the rearguard, and, when they retired to the main body, ceased his pursuit.

The king, upon the reduction of Prague, struck a medal, which had on one side a plan of the town, with this inscription:

“ Prague taken by the king of Prussia,
September 16, 1744;
For the third time in three years.”

On the other side were two verses, in which he prayed, “ that his conquests might produce peace.” He then marched forward with the rapidity which constitutes his military character; took possession of almost all Bohemia, and began to talk of entering Austria and besieging Vienna.

The queen was not yet wholly without resource. The elector of Saxony, whether invited or not, was not comprised in the union of Frankfort; and, as every sovereign is growing less as his next neighbour is growing greater, he could not heartily wish success to a confederacy which was to aggrandize the other powers of Germany. The Prussians gave him, likewise, a particular and immediate provocation to oppose them; for, when they departed to the conquest of Bohemia, with all the elation of

KING OF PRUSSIA

imaginary success, they passed through his dominions with unlicensed and contemptuous disdain of his authority. As the approach of prince Charles gave a new prospect of events, he was easily persuaded to enter into an alliance with the queen, whom he furnished with a very large body of troops.

The king of Prussia having left a garrison in Prague, which he commanded to put the burghers to death, if they left their houses in the night, went forward to take the other towns and fortresses, expecting, perhaps, that prince Charles would be interrupted in his march; but the French, though they appeared to follow him, either could not, or would not, overtake him.

In a short time, by marches pressed on with the utmost eagerness, Charles reached Bohemia, leaving the Bavarians to regain the possession of the wasted plains of their country, which their enemies, who still kept the strong places, might again seize at will. At the approach of the Austrian army, the courage of the king of Prussia seemed to have failed him. He retired from post to post, and evacuated town after town, and fortress after fortress, without resistance, or appearance of resistance, as if he was resigning them to the rightful owners.

It might have been expected, that he should have made some effort to rescue Prague; but, after a faint attempt to dispute the passage of the Elbe, he ordered his garrison of eleven thousand men to quit the place. They left behind them their magazines and heavy artillery, among which were seven pieces of remarkable excellence, called "the seven

KING OF PRUSSIA

electors." But they took with them their field cannon, and a great number of carriages, laden with stores and plunder, which they were forced to leave, in their way, to the Saxons and Austrians that harassed their march. They, at last, entered Silesia, with the loss of about a third part.

The king of Prussia suffered much in his retreat; for, besides the military stores, which he left every where behind him, even to the clothes of his troops, there was a want of provisions in his army, and, consequently, frequent desertions and many diseases; and a soldier sick or killed was equally lost to a flying army.

At last he reentered his own territories, and, having stationed his troops in places of security, returned, for a time, to Berlin, where he forbade all to speak either ill or well of the campaign.

To what end such a prohibition could conduce, it is difficult to discover: there is no country in which men can be forbidden to know what they know, and what is universally known may as well be spoken. It is true, that in popular governments seditious discourses may inflame the vulgar; but in such governments they cannot be restrained, and in absolute monarchies they are of little effect.

When the Prussians invaded Bohemia, and this whole nation was fired with resentment, the king of England gave orders in his palace, that none should mention his nephew with disrespect; by this command he maintained the decency necessary between princes, without enforcing, and, probably,

KING OF PRUSSIA

without expecting obedience, but in his own presence.

The king of Prussia's edict regarded only himself, and, therefore, it is difficult to tell what was his motive, unless he intended to spare himself the mortification of absurd and illiberal flattery, which, to a mind stung with disgrace, must have been in the highest degree painful and disgusting.

Moderation in prosperity is a virtue very difficult to all mortals; forbearance of revenge, when revenge is within reach, is scarcely ever to be found among princes. Now was the time when the queen of Hungary might, perhaps, have made peace on her own terms; but keenness of resentment, and arrogance of success, withheld her from the due use of the present opportunity. It is said, that the king of Prussia, in his retreat, sent letters to prince Charles, which were supposed to contain ample concessions, but were sent back unopened. The king of England offered, likewise, to mediate between them; but his propositions were rejected at Vienna, where a resolution was taken, not only to revenge the interruption of their success on the Rhine, by the recovery of Silesia, but to reward the Saxons for their seasonable help, by giving them part of the Prussian dominions.

In the beginning of the year 1745, died the emperor Charles of Bavaria; the treaty of Frankfort was consequently at an end; and the king of Prussia, being no longer able to maintain the character of auxiliary to the emperor, and having avowed no other reason for the war, might have

KING OF PRUSSIA

honourably withdrawn his forces, and, on his own principles, have complied with terms of peace; but no terms were offered him; the queen pursued him with the utmost ardour of hostility, and the French left him to his own conduct and his own destiny.

His Bohemian conquests were already lost; and he was now chased back into Silesia, where, at the beginning of the year, the war continued in an equilibration by alternate losses and advantages. In April, the elector of Bavaria, seeing his dominions overrun by the Austrians, and receiving very little succour from the French, made a peace with the queen of Hungary upon easy conditions, and the Austrians had more troops to employ against Prussia.

But the revolutions of war will not suffer human presumption to remain long unchecked. The peace with Bavaria was scarcely concluded when, the battle of Fontenoy was lost, and all the allies of Austria called upon her to exert her utmost power for the preservation of the Low Countries; and, a few days after the loss at Fontenoy, the first battle between the Prussians and the combined army of Austrians and Saxons, was fought at Niedburg in Silesia.

The particulars of this battle were variously reported by the different parties, and published in the journals of that time; to transcribe them would be tedious and useless, because accounts of battles are not easily understood, and because there are no means of determining to which of the relations credit should be given. It is sufficient that they all

KING OF PRUSSIA

end in claiming or allowing a complete victory to the king of Prussia, who gained all the Austrian artillery, killed four thousand, took seven thousand prisoners, with the loss, according to the Prussian narrative, of only sixteen hundred men.

He now advanced again into Bohemia, where, however, he made no great progress. The queen of Hungary, though defeated, was not subdued. She poured in her troops from all parts to the reinforcement of prince Charles, and determined to continue the struggle with all her power. The king saw that Bohemia was an unpleasant and inconvenient theatre of war, in which he should be ruined by a miscarriage, and should get little by a victory. Saxony was left defenceless, and, if it was conquered, might be plundered.

He, therefore, published a declaration against the elector of Saxony, and, without waiting for reply, invaded his dominions. This invasion produced another battle at Standentz, which ended, as the former, to the advantage of the Prussians. The Austrians had some advantage in the beginning; and their irregular troops, who are always daring, and are always ravenous, broke into the Prussian camp, and carried away the military chest. But this was easily repaired by the spoils of Saxony.

The queen of Hungary was still inflexible, and hoped that fortune would, at last, change. She recruited once more her army, and prepared to invade the territories of Brandenburg; but the king of Prussia's activity prevented all her designs. One part of his forces seized Leipsic, and the other once

BROWNE

more defeated the Saxons; the king of Poland fled from his dominions; prince Charles retired into Bohemia. The king of Prussia entered Dresden as a conqueror, exacted very severe contributions from the whole country, and the Austrians and Saxons were, at last, compelled to receive from him such a peace as he would grant. He imposed no severe conditions, except the payment of the contributions, made no new claim of dominions, and, with the elector Palatine, acknowledged the duke of Tuscany for emperor.

The lives of princes, like the histories of nations, have their periods. We shall here suspend our narrative of the king of Prussia, who was now at the height of human greatness, giving laws to his enemies, and courted by all the powers of Europe.

BROWNE

THOUGH the writer of the following essays^b seems to have had the fortune, common among men of letters, of raising little curiosity after his private life, and has, therefore, few memorials preserved of his felicities and misfortunes; yet, because an edition of a posthumous work appears imperfect and neglected, without some account of the author, it was thought necessary to attempt the gratification of that curiosity which naturally inquires by what peculiarities of nature or fortune eminent men have been distinguished, how uncommon attainments have been gained, and what influence learning had on its possessours, or virtue on its teachers.

Sir Thomas Browne was born at London, in the

^b Christian Morals, first printed in 1756.

BROWNE

parish of St. Michael in Cheapside, on the 19th of October, 1605^c. His father was a merchant, of an ancient family at Upton, in Cheshire. Of the name or family of his mother I find no account.

Of his childhood or youth there is little known, except that he lost his father very early; that he was, according to the common fate of orphans^d, defrauded by one of his guardians; and that he was placed, for his education, at the school of Winchester.

His mother, having taken three thousand pounds^e, as the third part of her husband's property, left her son, by consequence, six thousand, a large fortune for a man destined to learning, at that time, when commerce had not yet filled the nation with nominal riches. But it happened to him, as to many others, to be made poorer by opulence; for his mother soon married sir Thomas Dutton, probably by the inducement of her fortune; and he was left to the rapacity of his guardian, deprived now of both his parents, and, therefore, helpless, and unprotected.

He was removed in the beginning of the year 1623, from Winchester to Oxford^f, and entered a gentleman-commoner of Broadgate hall, which was soon afterwards endowed, and took the name of Pembroke college, from the earl of Pembroke, then chancellor of the university. He was admitted to the degree of bachelor of arts, January 31, 1626-7; being, as Wood remarks, the first man of eminence graduated from the new college, to which the zeal or

BROWNE

gratitude of those that love it most, can wish little better than that it may long proceed as it began.

Having afterwards taken his degree of master of arts, he turned his studies to physick^g, and practised it for some time in Oxfordshire; but soon afterwards, either induced by curiosity, or invited by promises, he quitted his settlement, and accompanied his father-in-law^h, who had some employment in Ireland, in a visitation of the forts and castles, which the state of Ireland then made necessary.

He that has once prevailed on himself to break his connexions of acquaintance, and begin a wandering life, very easily continues it. Ireland had, at that time, very little to offer to the observation of a man of letters; he, therefore, passed into France and Italyⁱ; made some stay at Montpellier and Padua, which were then the celebrated schools of physick; and, returning home through Holland, procured himself to be created doctor of physick at Leyden.

When he began his travels, or when he concluded them, there is no certain account; nor do there remain any observations made by him in his passage through those countries which he visited. To consider, therefore, what pleasure or instruction might have been received from the remarks of a man so curious and diligent, would be voluntarily to indulge a painful reflection, and load the imagination with a wish, which, while it is formed, is known to be vain. It is, however, to be lamented, that those who are most capable of improving mankind, very

^g Wood.

BROWNE

frequently neglect to communicate their knowledge; either because it is more pleasing to gather ideas than to impart them, or because, to minds naturally great, few things appear of so much importance as to deserve the notice of the publick.

About the year 1634^j, he is supposed to have returned to London; and the next year to have written his celebrated treatise, called *Religio Medici*, “the religion of a physician^k,” which he declares himself never to have intended for the press, having composed it only for his own exercise and entertainment. It, indeed, contains many passages, which, relating merely to his own person, can be of no great importance to the publick; but when it was written, it happened to him as to others, he was too much pleased with his performance, not to think that it might please others as much; he, therefore, communicated it to his friends, and receiving, I suppose, that exuberant applause with which every man repays the grant of perusing a manuscript, he was not very diligent to obstruct his own praise by recalling his papers, but suffered them to wander from hand to hand, till, at last, without his own consent, they were, in 1642, given to a printer.

This has, perhaps, sometimes befallen others; and this, I am willing to believe, did really happen to Dr. Browne: but there is, surely, some reason to doubt the truth of the complaint so frequently made of surreptitious editions. A song, or an epigram, may be easily printed without the author’s knowl-

^j *Biographia Britannica*.

^k Letter to sir Kenelm Digby, prefixed to the *Religio Medici*, fol. edit.

BROWNE

edge; because it may be learned when it is repeated, or may be written out with very little trouble; but a long treatise, however elegant, is not often copied by mere zeal or curiosity, but may be worn out in passing from hand to hand, before it is multiplied by a transcript. It is easy to convey an imperfect book, by a distant hand, to the press, and plead the circulation of a false copy, as an excuse for publishing the true, or to correct what is found faulty or offensive, and charge the errors on the transcriber's deprivations.

This is a stratagem, by which an author, panting for fame, and yet afraid of seeming to challenge it, may at once gratify his vanity, and preserve the appearance of modesty; may enter the lists, and secure a retreat; and this candour might suffer to pass undetected, as an innocent fraud, but that, indeed, no fraud is innocent; for the confidence which makes the happiness of society is, in some degree, diminished by every man whose practice is at variance with his words.

The *Religio Medici* was no sooner published than it excited the attention of the publick, by the novelty of paradoxes, the dignity of sentiment, the quick succession of images, the multitude of abstruse allusions, the subtilty of disquisition, and the strength of language.

What is much read will be much criticised. The earl of Dorset recommended this book to the perusal of sir Kenelm Digby, who returned his judgment upon it, not in a letter, but a book; in which, though mingled with some positions fabulous and

BROWNE

uncertain, there are acute remarks, just censures, and profound speculations; yet its principal claim to admiration is, that it was written in twenty-four hours¹, of which part was spent in procuring Browne's book, and part in reading it.

Of these animadversions, when they were yet not all printed, either officiousness or malice informed Dr. Browne; who wrote to sir Kenelm, with much softness and ceremony, declaring the unworthiness of his work to engage such notice, the intended privacy of the composition, and the corruptions of the impression; and received an answer equally genteel and respectful, containing high commendations of the piece, pompous professions of reverence, meek acknowledgments of inability, and anxious apologies for the hastiness of his remarks.

The reciprocal civility of authors is one of the most risible scenes in the farce of life. Who would not have thought, that these two luminaries of their age had ceased to endeavour to grow bright by the obscuration of each other? yet the animadversions thus weak, thus precipitate, upon a book thus injured in the transcription, quickly passed the press; and *Religio Medici* was more accurately published, with an admonition prefixed, "to those who have or shall peruse the observations upon a former corrupt copy;" in which there is a severe censure, not upon Digby, who was to be used with ceremony, but upon the observator who had usurped his name; nor was this invective written by Dr. Browne, who was supposed to be satisfied with his opponent's

¹ Digby's Letter to Browne, prefixed to the *Religio Medici*, fol. edit.

BROWNE

apology; but by some officious friend, zealous for his honour, without his consent.

Browne has, indeed, in his own preface, endeavoured to secure himself from rigorous examination, by alleging, that “many things are delivered rhetorically, many expressions merely tropical, and, therefore, many things to be taken in a soft and flexible sense, and not to be called unto the rigid test of reason.” The first glance upon his book will, indeed, discover examples of this liberty of thought and expression: “I could be content,” says he, “to be nothing almost to eternity, if I might enjoy my Saviour at the last.” He has little acquaintance with the acuteness of Browne, who suspects him of a serious opinion, that any thing can be “almost eternal,” or that any time beginning and ending is not infinitely less than infinite duration.

In this book he speaks much, and, in the opinion of Digby, too much of himself; but with such generality and conciseness, as affords very little light to his biographer: he declares, that, besides the dialects of different provinces, he understood six languages; that he was no stranger to astronomy; and that he had seen several countries; but what most awakens curiosity is, his solemn assertion, that “his life has been a miracle of thirty years; which to relate were not history, but a piece of poetry, and would sound like a fable.”

There is, undoubtedly, a sense in which all life is miraculous; as it is an union of powers of which we can image no connexion, a succession of motions, of which the first cause must be supernatural; but

BROWNE

life, thus explained, whatever it may have of miracle, will have nothing of fable; and, therefore, the author undoubtedly had regard to something, by which he imagined himself distinguished from the rest of mankind.

Of these wonders, however, the view that can be now taken of his life offers no appearance. The course of his education was like that of others, such as put him little in the way of extraordinary casualties. A scholastick and academical life is very uniform; and has, indeed, more safety than pleasure. A traveller has greater opportunities of adventure; but Browne traversed no unknown seas, or Arabian deserts; and, surely, a man may visit France and Italy, reside at Montpellier and Padua, and, at last, take his degree at Leyden, without any thing miraculous. What it was that would, if it was related, sound so poetical and fabulous, we are left to guess; I believe without hope of guessing rightly. The wonders, probably, were transacted in his own mind; self-love, cooperating with an imagination vigorous and fertile as that of Browne, will find or make objects of astonishment in every man's life; and, perhaps, there is no human being, however hid in the crowd from the observation of his fellow-mortals, who, if he has leisure and disposition to recollect his own thoughts and actions, will not conclude his life in some sort a miracle, and imagine himself distinguished from all the rest of his species by many discriminations of nature or of fortune.

The success of this performance was such as might naturally encourage the author to new undertak-

BROWNE

ings. A gentleman of Cambridge^m, whose name was Merryweather, turned it not inelegantly into Latin; and from his version it was again translated into Italian, German, Dutch, and French; and, at Strasburg, the Latin translation was published with large notes, by Levinus Nicolaus Moltkenius. Of the English annotations, which in all the editions, from 1644, accompany the book, the author is unknown.

Of Merryweather, to whose zeal Browne was so much indebted for the sudden extension of his renown, I know nothing, but that he published a small treatise for the instruction of young persons in the attainment of a Latin style. He printed his translation in Holland with some difficultyⁿ. The first printer to whom he offered it, carried it to Salmasius, "who laid it by," says he, "in state for three months," and then discouraged its publication: it was afterwards rejected by two other printers, and, at last, was received by Hackius.

The peculiarities of this book raised the author, as is usual, many admirers and many enemies; but we know not of more than one professed answer, written under the title of *Medicus Medicatus*^o, by Alexander Ross, which was universally neglected by the world.

At the time when this book was published, Dr. Browne resided at Norwich, where he had settled in 1636, by the persuasion of Dr. Lushington^p, his tutor, who was then rector of Barnham Westgate,

BROWNE

in the neighbourhood. It is recorded by Wood, that his practice was very extensive, and that many patients resorted to him. In 1637 he was incorporated doctor of physick in Oxford^a.

He married, in 1741, Mrs. Mileham^r, of a good family in Norfolk; "a lady," says Whitefoot, "of such symmetrical proportion to her worthy husband, both in the graces of her body and mind, that they seemed to come together by a kind of natural magnetism."

This marriage could not but draw the raillery of contemporary wits^s upon a man who had just been wishing, in his new book, "that we might procreate, like trees, without conjunction," and had lately declared^t, that "the whole world was made for man, but only the twelfth part of man for woman;" and, that "man is the whole world, but woman only the rib or crooked part of man."

Whether the lady had been yet informed of these contemptuous positions, or whether she was pleased with the conquest of so formidable a rebel, and considered it as a double triumph, to attract so much merit, and overcome so powerful prejudices; or whether, like most others, she married upon mingled motives, between convenience and inclination; she had, however, no reason to repent, for she lived happily with him one-and-forty years, and bore him ten children, of whom one son and three daughters outlived their parents: she survived him two years, and passed her widowhood in plenty, if not in opulence.

^a Wood. ^r Whitefoot. ^s Howell's Letters. ^t Religio Medici.

BROWNE

Browne having now entered the world as an author, and experienced the delights of praise and molestations of censure, probably found his dread of the publick eye diminished; and, therefore, was not long before he trusted his name to the criticks a second time; for, in 1646ⁿ, he printed *Inquiries into vulgar and common Errours*; a work, which, as it arose not from fancy and invention, but from observation and books, and contained not a single discourse of one continued tenour, of which the latter part arose from the former, but an enumeration of many unconnected particulars, must have been the collection of years, and the effect of a design early formed and long pursued, to which his remarks had been continually referred, and which arose gradually to its present bulk by the daily aggregation of new particles of knowledge. It is, indeed, to be wished, that he had longer delayed the publication, and added what the remaining part of his life might have furnished: the thirty-six years which he spent afterwards in study and experience, would, doubtless, have made large additions to an inquiry into vulgar errors. He published, in 1673, the sixth edition, with some improvements; but I think rather with explication of what he had already written, than any new heads of disquisition. But with the work, such as the author, whether hindered from continuing it by eagerness of praise, or weariness of labour, thought fit to give, we must be content; and remember, that in all sublunary

ⁿ Life of sir Thomas Browne.

BROWNE

things there is something to be wished which we must wish in vain.

This book, like his former, was received with great applause, was answered by Alexander Ross, and translated into Dutch and German, and, not many years ago, into French. It might now be proper, had not the favour with which it was first received filled the kingdom with copies, to reprint it with notes, partly supplemental, and partly emendatory, to subjoin those discoveries which the industry of the last age has made, and correct those mistakes which the author has committed, not by idleness or negligence, but for want of Boyle's and Newton's philosophy.

He appears, indeed, to have been willing to pay labour for truth. Having heard a flying rumour of sympathetick needles, by which, suspended over a circular alphabet, distant friends or lovers might correspond, he procured two such alphabets to be made, touched his needles with the same magnet, and placed them upon proper spindles: the result was, that when he moved one of his needles, the other, instead of taking, by sympathy, the same direction, "stood like the pillars of Hercules." That it continued motionless, will be easily believed; and most men would have been content to believe it, without the labour of so hopeless an experiment. Browne might himself have obtained the same conviction by a method less operose, if he had thrust his needles through corks, and set them afloat in two basins of water.

Notwithstanding his zeal to detect old errors,

BROWNE

he seems not very easy to admit new positions, for he never mentions the motion of the earth but with contempt and ridicule, though the opinion which admits it was then growing popular, and was surely plausible, even before it was confirmed by later observations.

The reputation of Browne encouraged some low writer to publish, under his name, a book called *Nature's Cabinet unlocked*†, — translated, according to Wood, from the physicks of Magirus; of which Browne took care to clear himself, by modestly advertising, that “if any man had been benefited by it, he was not so ambitious as to challenge the honour thereof, as having no hand in that work‡.”

In 1658, the discovery of some ancient urns in Norfolk gave him occasion to write *Hydriotaphia, Urn-Burial, or a Discourse of sepulchral Urns*; in which he treats, with his usual learning, on the funeral rites of the ancient nations; exhibits their various treatment of the dead; and examines the substances found in his Norfolkian urns. There is, perhaps, none of his works which better exemplifies his reading or memory. It is scarcely to be imagined, how many particulars he has amassed together, in a treatise which seems to have been occasionally written; and for which, therefore, no materials could have been previously collected. It is, indeed, like other treatises of antiquity, rather for curiosity than use; for it is of small importance to know which nation buried their dead in the ground, which

† Wood, and *Life of sir Thomas Browne*.

‡ At the end of *Hydriotaphia*.

BROWNE

threw them into the sea, or which gave them to birds and beasts; when the practice of cremation began, or when it was disused; whether the bones of different persons were mingled in the same urn; what oblations were thrown into the pyre; or how the ashes of the body were distinguished from those of other substances. Of the uselessness of these inquiries, Browne seems not to have been ignorant; and, therefore, concludes them with an observation which can never be too frequently recollected:

“All, or most apprehensions, rested in opinions of some future being, which, ignorantly or coldly believed, begat those perverted conceptions, ceremonies, sayings, which christians pity or laugh at. Happy are they, which live not in that disadvantage of time, when men could say little for futurity, but from reason; whereby the noblest mind fell often upon doubtful deaths, and melancholy dissolutions; with these hopes Socrates warmed his doubtful spirits against the cold potion; and Cato, before he durst give the fatal stroke, spent part of the night in reading the immortality of Plato, thereby confirming his wavering hand unto the animosity of that attempt.

“It is the heaviest stone that melancholy can throw at a man, to tell him he is at the end of his nature; or that there is no further state to come, unto which this seems progressional, and otherwise made vain: without this accomplishment, the natural expectation and desire of such a state were but a fallacy in nature: unsatisfied considerators would quarrel at the justness of the constitution, and rest con-

BROWNE

tent that Adam had fallen lower, whereby, by knowing no other original, and deeper ignorance of themselves, they might have enjoyed the happiness of inferiour creatures, who in tranquillity possess their constitutions, as having not the apprehension to deplore their own natures; and being framed below the circumference of these hopes of cognition of better things, the wisdom of God hath necessitated their contentment. But the superiour ingredient and obscured part of ourselves, whereto all present felicities afford no resting contentment, will be able, at last, to tell us we are more than our present selves; and evacuate such hopes in the fruition of their own accomplishments.”

To his treatise on urn-burial, was added the Garden of Cyrus, or the quincunxial Lozenge, or network Plantation of the Ancients, artificially, naturally, mystically, considered. This discourse he begins with the Sacred Garden, in which the first man was placed; and deduces the practice of horticulture, from the earliest accounts of antiquity to the time of the Persian Cyrus, the first man whom we actually know to have planted a quincunx; which, however, our author is inclined to believe of longer date, and not only discovers it in the description of the hanging gardens of Babylon, but seems willing to believe, and to persuade his reader, that it was practised by the feeders on vegetables before the flood.

Some of the most pleasing performances have been produced by learning and genius, exercised upon subjects of little importance. It seems to have

BROWNE

been, in all ages, the pride of wit, to show how it could exalt the low, and amply the little. To speak not inadequately of things really and naturally, great, is a task not only difficult but disagreeable; because the writer is degraded in his own eyes, by standing in comparison with his subject, to which he can hope to add nothing from his imagination: but it is a perpetual triumph of fancy to expand a scanty theme, to raise glittering ideas from obscure properties, and to produce to the world an object of wonder, to which nature had contributed little. To this ambition, perhaps, we owe the frogs of Homer, the gnat and the bees of Virgil, the butterfly of Spenser, the shadow of Wowerus, and the quincunx of Browne.

In the prosecution of this sport of fancy, he considers every production of art and nature, in which he could find any decussation or approaches to the form of a quincunx; and, as a man once resolved upon ideal discoveries seldom searches long in vain, he finds his favourite figure in almost every thing, whether natural or invented, ancient or modern, rude or artificial, sacred or civil; so that a reader, not watchful against the power of his infusions, would imagine that decussation was the great business of the world, and that nature and art had no other purpose than to exemplify and imitate a quincunx.

To show the excellence of this figure, he enumerates all its properties; and finds it in almost every thing of use or pleasure: and to show how readily he supplies what he cannot find, one instance may

BROWNE

be sufficient: "though therein," says he, "we meet not with right angles, yet every rhombus containing four angles equal unto two right, it virtually contains two right in every one."

The fanciful sports of great minds are never without some advantage to knowledge. Browne has interspersed many curious observations on the form of plants, and the laws of vegetation; and appears to have been a very accurate observer of the modes of germination, and to have watched with great nicety, the evolution of the parts of plants from their seminal principles.

He is then naturally led to treat of the number five; and finds, that by this number many things are circumscribed; that there are five kinds of vegetable productions, five sections of a cone, five orders of architecture, and five acts of a play. And observing that five was the ancient conjugal, or wedding number, he proceeds to a speculation, which I shall give in his own words: "the ancient numerists made out the conjugal number by two and three, the first parity and imparity, the active and passive digits, the material and formal principles in generative societies."

These are all the tracts which he published. But many papers were found in his closet: "some of them," says Whitefoot, "designed for the press, were often transcribed and corrected by his own hand, after the fashion of great and curious writers."

Of these, two collections have been published; one by Dr. Tenison, the other, in 1722, by a nameless editor. Whether the one or the other selected

BROWNE

those pieces, which the author would have preferred, cannot be known; but they have both the merit of giving to mankind what was too valuable to be suppressed; and what might, without their interposition, have, perhaps, perished among other innumerable labours of learned men, or have been burnt in a scarcity of fuel, like the papers of Pierescius.

The first of these posthumous treatises contains Observations upon several plants mentioned in Scripture: these remarks, though they do not immediately either rectify the faith, or refine the morals of the reader, yet are by no means to be censured as superfluous niceties, or useless speculations; for they often show some propriety of description, or elegance of allusion, utterly undiscoverable to readers not skilled in oriental botany; and are often of more important use, as they remove some difficulty from narratives, or some obscurity from precepts.

The next is, of Garlands, or coronary and garland Plants; a subject merely of learned curiosity, without any other end than the pleasure of reflecting on ancient customs, or on the industry with which studious men have endeavoured to recover them.

The next is a letter, on the Fishes eaten by our Saviour with his Disciples, after his Resurrection from the Dead: which contains no determinate resolution of the question, what they were, for, indeed, it cannot be determined. All the information that diligence or learning could supply, consists in

BROWNE

an enumeration of the fishes produced in the waters of Judea.

Then follow, Answers to certain Queries about Fishes, Birds, Insects; and a Letter of Hawks and Falconry, ancient and modern; in the first of which he gives the proper interpretation of some ancient names of animals, commonly mistaken; and in the other, has some curious observations on the art of hawking, which he considers as a practice unknown to the ancients. I believe all our sports of the field are of Gothick original; the ancients neither hunted by the scent, nor seemed much to have practised horsemanship, as an exercise; and though in their works there is mention of *aucupium* and *piscatio*, they seemed no more to have been considered as diversions, than agriculture, or any other manual labour.

In two more letters, he speaks of the cymbals of the Hebrews, but without any satisfactory determination; and of *rhopalick*, or gradual verses, that is, of verses beginning with a word of one syllable, and proceeding by words of which each has a syllable more than the former; as,

“O deus, æterne stationis conciliator.” AUSONIUS.

And after this manner pursuing the hint, he mentions many other restrained methods of versifying, to which industrious ignorance has sometimes voluntarily subjected itself.

His next attempt is, on Languages, and particularly the Saxon Tongue. He discourses with great learning, and generally with great justness, of the

BROWNE

derivation and changes of languages; but, like other men of multifarious learning, he receives some notions without examination. Thus he observes, according to the popular opinion, that the Spaniards have retained so much Latin as to be able to compose sentences that shall be, at once, grammatically Latin and Castilian: this will appear very unlikely to a man that considers the Spanish terminations; and Howell, who was eminently skilful in the three provincial languages, declares, that, after many essays, he never could effect it^x.

The principal design of this letter, is to show the affinity between the modern English, and the ancient Saxon; and he observes, very rightly, that “though we have borrowed many substantives, adjectives, and some verbs, from the French; yet the great body of numerals, auxiliary verbs, articles, pronouns, adverbs, conjunctions, and prepositions, which are the distinguishing and lasting parts of a language, remain with us from the Saxon.”

To prove this position more evidently, he has drawn up a short discourse of six paragraphs, in Saxon and English; of which every word is the

^x Johnson, by trusting to his memory, has here fallen into an error. Howell, in his instructions for Foreign Travell, has said directly the reverse of what is ascribed to him: “I have beaten my brains,” he tells us, “to make one sentence good Italian and congruous Latin, but could never do it; but in Spanish it is very feasible, as, for example, in this stanza:

Infausta Græcia, tu paris gentes
Lubricas, sed amicitias dolosas,
Machinando fraudes cautilosas,
Ruinando animas innocentes:

which is good Latin enough; and yet is vulgar Spanish, intelligible to every plebian.”—J. B.

BROWNE

same in both languages, excepting the terminations and orthography. The words are, indeed, Saxon, but the phraseology is English; and, I think, would not have been understood by Bede or Elfric, notwithstanding the confidence of our author. He has, however, sufficiently proved his position, that the English resembles its paternal language more than any modern European dialect.

There remain five tracts of this collection yet unmentioned; one, of artificial Hills, Mounts, or Barrows, in England; in reply to an interrogatory letter of E. D. whom the writers of the *Biographia Britannica* suppose to be, if rightly printed, W. D. or sir William Dugdale, one of Browne's correspondents. These are declared by Browne, in concurrence, I think, with all other antiquaries, to be, for the most part, funeral monuments. He proves, that both the Danes and Saxons buried their men of eminence under piles of earth, "which admitting," says he, "neither ornament, epitaph, nor inscription, may, if earthquakes spare them, outlast other monuments: obelisks have their term, and pyramids will tumble; but these mountainous monuments may stand, and are like to have the same period with the earth."

In the next, he answers two geographical questions; one concerning Troas, mentioned in the acts and epistles of St. Paul, which he determines to be the city built near the ancient Ilium; and the other concerning the Dead sea, of which he gives the same account with other writers.

Another letter treats of the Answers of the

BROWNE

Oracle of Apollo, at Delphos, to Croesus, king of Lydia. In this tract nothing deserves notice, more than that Browne considers the oracles as evidently and indubitably supernatural, and founds all his disquisition upon that postulate. He wonders why the physiologists of old, having such means of instruction, did not inquire into the secrets of nature: but judiciously concludes, that such questions would probably have been vain; “for in matters cognoscible, and formed for our disquisition, our industry must be our oracle, and reason our Apollo.”

The pieces that remain are, a Prophecy concerning the future State of several Nations; in which Browne plainly discovers his expectation to be the same with that entertained lately, with more confidence, by Dr. Berkeley, “that America will be the seat of the fifth empire;” and, *Museum clausum, sive Bibliotheca abscondita*: in which the author amuses himself with imagining the existence of books and curiosities, either never in being or irrecoverably lost.

These pieces I have recounted, as they are ranged in Tenison’s collection, because the editor has given no account of the time at which any of them were written.

Some of them are of little value, more than as they gratify the mind with the picture of a great scholar, turning his learning into amusement; or show upon how great a variety of inquiries, the same mind has been successfully employed.

The other collection of his posthumous pieces, published in octavo, London, 1722, contains Reper-

BROWNE

torium; or some account of the Tombs and Monuments in the Cathedral of Norwich; where, as Tenison observes, there is not matter proportionate to the skill of the antiquary.

The other pieces are, Answers to sir William Dugdale's Inquiries about the Fens; a letter concerning Ireland; another relating to urns newly discovered; some short strictures on different subjects; and a Letter to a Friend on the Death of his intimate Friend, published singly by the author's son, in 1690.

There is inserted in the *Biographia Britannica*, a Letter containing Instructions for the Study of Physick: which, with the essays here offered to the publick, completes the works of Dr. Browne.

To the life of this learned man, there remains little to be added, but that, in 1665, he was chosen honorary fellow of the college of physicians, as a man, "virtute et literis ornatissimus," eminently embellished with literature and virtue; and in 1671, received, at Norwich, the honour of knighthood from Charles the second, a prince, who, with many frailties and vices, had yet skill to discover excellence, and virtue to reward it with such honorary distinctions, at least, as cost him nothing, yet, conferred by a king so judicious and so much beloved, had the power of giving merit new lustre and greater popularity.

Thus he lived in high reputation, till, in his seventy-sixth year, he was seized with a colick, which, after having tortured him about a week, put an end to his life at Norwich, on his birthday, October 19,

BROWNE

1682^y. Some of his last words were expressions of submission to the will of God, and fearlessness of death.

He lies buried in the church of St. Peter Mancroft, in Norwich, with this inscription on a mural monument, placed on the south pillar of the altar:

M. S.
Hic situs est THOMAS BROWNE, M. D.
Et miles.
Anno 1605, Londini natus;
Generosa familia apud Upton
In agro Cestriensi oriundus.
Schola primum Wintoniensi, postea
In Coll. Pembr.
Apud Oxonienses bonis literis
Haud leviter imbutus;
In urbe hac Nordovicensi medicinam
Arte egregia, et foelici successu professus;
Scriptis quibus tituli, RELIGIO MEDICI
Et PSEUDODOXIA EPIDEMICA, aliisque
Per orbem notissimus.
Vir prudentissimus, integerrimus, doctissimus;
Obijt Octob. 19, 1682.
Pie posuit mœstissima conjux
Da. Doroth. Br.

Near the foot of this pillar
Lies Sir Thomas Browne, knt. and doctor in physick,
Author of Religio Medici, and other learned books,
Who practised physick in this city 46 years,
And died Oct. 1682, in the 77th year of his age.
In memory of whom,
Dame Dorothy Browne, who had been his affectionate
Wife 47 years, caused this monument to be
Erected.

Besides this lady, who died in 1685, he left a son and three daughters. Of the daughters nothing very remarkable is known; but his son, Edward Browne, requires a particular mention.

^y Browne's Remains.—Whitefoot.

BROWNE

He was born about the year 1642; and, after having passed through the classes of the school at Norwich, became bachelor of physick at Cambridge; and afterwards removing to Merton college in Oxford, was admitted there to the same degree, and afterwards made a doctor. In 1668 he visited part of Germany; and in the year following made a wider excursion into Austria, Hungary and Thesaly; where the Turkish sultan then kept his court at Larissa. He afterwards passed through Italy. His skill in natural history made him particularly attentive to mines and metallurgy. Upon his return, he published an account of the countries through which he had passed; which I have heard commended by a learned traveller, who has visited many places after him, as written with scrupulous and exact veracity, such as is scarcely to be found in any other book of the same kind. But whatever it may contribute to the instruction of a naturalist, I cannot recommend it, as likely to give much pleasure to common readers; for, whether it be that the world is very uniform, and, therefore, he who is resolved to adhere to truth will have few novelties to relate; or, that Dr. Browne was, by the train of his studies, led to inquire most after those things by which the greatest part of mankind is little affected; a great part of his book seems to contain very unimportant accounts of his passage from one place where he saw little, to another where he saw no more.

Upon his return, he practised physick in London; was made physician first to Charles the second, and

BROWNE

afterwards, in 1682, to St. Bartholomew's hospital. About the same time, he joined his name to those of many other eminent men, in a translation of Plutarch's lives. He was first censor, then elect, and treasurer of the college of physicians; of which, in 1705, he was chosen president, and held his office till, in 1708, he died, in a degree of estimation suitable to a man so variously accomplished, that king Charles had honoured him with this panegyrick, that "he was as learned as any of the college, and as well bred as any of the court."

Of every great and eminent character, part breaks forth into publick view, and part lies hid in domestick privacy. Those qualities, which have been exerted in any known and lasting performances, may, at any distance of time, be traced and estimated; but silent excellencies are soon forgotten; and those minute peculiarities which discriminate every man from all others, if they are not recorded by those whom personal knowledge enables to observe them, are irrecoverably lost. This mutilation of character must have happened, among many others, to sir Thomas Browne, had it not been delineated by his friend Mr. Whitefoot, "who esteemed it an especial favour of providence, to have had a particular acquaintance with him for two-thirds of his life." Part of his observations I shall therefore copy.

"For a character of his person, his complexion and hair was answerable to his name; his stature was moderate, and a habit of body neither fat nor lean, but *εὐσαρκος*.

BROWNE

“ In his habit of clothing, he had an aversion to all finery, and affected plainness, both in the fashion and ornaments. He ever wore a cloak, or boots, when few others did. He kept himself always very warm, and thought it most safe so to do, though he never loaded himself with such a multitude of garments, as Suetonius reports of Augustus, enough to clothe a good family.

“ The horizon of his understanding was much larger than the hemisphere of the world: all that was visible in the heavens he comprehended so well, that few that are under them knew so much: he could tell the number of the visible stars in his horizon, and call them all by their names that had any; and of the earth he had such a minute and exact geographical knowledge, as if he had been by divine providence ordained surveyor-general of the whole terrestrial orb, and its products, minerals, plants, and animals. He was so curious a botanist, that, besides the specific distinctions, he made nice and elaborate observations, equally useful as entertaining.

“ His memory, though not so eminent as that of Seneca or Scaliger, was capacious and tenacious, insomuch as he remembered all that was remarkable in any book that he had read; and not only knew all persons again that he had ever seen, at any distance of time, but remembered the circumstances of their bodies, and their particular discourses and speeches.

“ In the Latin poets he remembered every thing that was acute and pungent; he had read most of

BROWNE

the historians, ancient and modern, wherein his observations were singular, not taken notice of by common readers; he was excellent company when he was at leisure, and expressed more light than heat in the temper of his brain.

“ He had no despotical power over his affections and passions, (that was a privilege of original perfection, forfeited by the neglect of the use of it,) but as large a political power over them, as any stoick, or man of his time; whereof he gave so great experiment, that he hath very rarely been known to have been overcome with any of them. The strongest that were found in him, both of the irascible and concupiscible, were under the control of his reason. Of admiration, which is one of them, being the only product either of ignorance or uncommon knowledge, he had more and less than other men, upon the same account of his knowing more than others; so that though he met with many varieties, he admired them not so much as others do.

“ He was never seen to be transported with mirth, or dejected with sadness; always cheerful, but rarely merry, at any sensible rate; seldom heard to break a jest; and when he did, he would be apt to blush at the levity of it: his gravity was natural, without affectation.

“ His modesty was visible in a natural habitual blush, which was increased upon the least occasion, and oft discovered without any observable cause.

“ They that knew no more of him than by the briskness of his writings, found themselves deceived in their expectation, when they came in his com-

BROWNE

pany, noting the gravity and sobriety of his aspect and conversation; so free from loquacity or much talkativeness, that he was sometimes difficult to be engaged in any discourse; though when he was so, it was always singular, and never trite or vulgar. Parsimonious in nothing but his time, whereof he made as much improvement, with as little loss as any man in it: when he had any to spare from his drudging practice, he was scarce patient of any diversion from his study; so impatient of sloth and idleness, that he would say, he could not do nothing.

“ Sir Thomas understood most of the European languages; viz. all that are in Hutter’s Bible, which he made use of. The Latin and Greek he understood critically; the oriental languages, which never were vernacular in this part of the world, he thought the use of them would not answer the time and pains of learning them; yet had so great a veneration for the matrix of them, viz. the Hebrew, consecrated to the oracles of God, that he was not content to be totally ignorant of it; though very little of his science is to be found in any books of that primitive language. And though much is said to be written in the derivative idioms of that tongue, especially the Arabick, yet he was satisfied with the translations, wherein he found nothing admirable.

“ In his religion he continued in the same mind which he had declared in his first book, written when he was but thirty years old, his *Religio Medici*, wherein he fully assented to that of the church of England, preferring it before any in the world, as did the learned Grotius. He attended the publick

BROWNE

service very constantly, when he was not withheld by his practice; never missed the sacrament in his parish, if he were in town; read the best English sermons he could hear of, with liberal applause; and delighted not in controversies. In his last sickness, wherein he continued about a week's time, enduring great pain of the colick, besides a continual fever, with as much patience as hath been seen in any man, without any pretence of stoical apathy, animosity, or vanity of not being concerned thereat, or suffering no impeachment of happiness: 'Nihil agis, dolor.'

“His patience was founded upon the christian philosophy, and a sound faith of God's providence, and a meek and holy submission thereunto, which he expressed in few words. I visited him near his end, when he had not strength to hear or speak much; the last words which I heard from him were, besides some expressions of dearness, that he did freely submit to the will of God, being without fear; he had often triumphed over the king of terrors in others, and given many repulses in the defence of patients; but, when his own turn came, he submitted with a meek, rational, and religious courage.

“He might have made good the old saying of 'dat Galenus opes,' had he lived in a place that could have afforded it. But his indulgence and liberality to his children, especially in their travels, two of his sons in divers countries, and two of his daughters in France, spent him more than a little. He was liberal in his house entertainments and in his charity: he left a comfortable, but no great estate, both to his lady and children, gained by his own industry.

BROWNE

“Such was his sagacity and knowledge of all history, ancient and modern, and his observations thereupon so singular, that, it hath been said, by them that knew him best, that, if his profession, and place of abode, would have suited his ability, he would have made an extraordinary man for the privy council, not much inferiour to the famous Padre Paulo, the late oracle of the Venetian state.

“Though he were no prophet, nor son of a prophet, yet in that faculty which comes nearest it, he excelled, i. e. the stochastick, wherein he was seldom mistaken, as to future events, as well publick as private; but not apt to discover any presages or superstition.”

It is observable, that he, who, in his earlier years, had read all the books against religion, was, in the latter part of his life, averse from controversies. To play with important truths, to disturb the repose of established tenets, to subtilize objections, and elude proof, is too often the sport of youthful vanity, of which maturer experience commonly repents. There is a time when every man is weary of raising difficulties only to task himself with the solution, and desires to enjoy truth without the labour or hazard of contest. There is, perhaps, no better method of encountering these troublesome irruptions of skepticism, with which inquisitive minds are frequently harassed, than that which Browne declares himself to have taken: “If there arise any doubts in my way, I do forget them; or, at least, defer them, till my better settled judgment, and more manly reason, be able to resolve them: for I perceive every man’s

BROWNE

reason is his best *Œdipus*, and will, upon a reasonable truce, find a way to loose those bonds, wherewith the subtilties of error have enchained our more flexible and tender judgments.”

The foregoing character may be confirmed and enlarged by many passages in the *Religio Medici*; in which it appears, from Whitefoot's testimony, that the author, though no very sparing panegyrist of himself, had not exceeded the truth, with respect to his attainments or visible qualities.

There are, indeed, some interior and secret virtues, which a man may, sometimes, have without the knowledge of others; and may, sometimes, assume to himself, without sufficient reasons for his opinion. It is charged upon Browne, by Dr. Watts, as an instance of arrogant temerity, that, after a long detail of his attainments, he declares himself to have escaped “the first and father-sin of pride.” A perusal of the *Religio Medici* will not much contribute to produce a belief of the author's exemption from this father-sin; pride is a vice, which pride itself inclines every man to find in others, and to overlook in himself.

As easily may we be mistaken in estimating our own courage, as our own humility; and, therefore, when Browne shows himself persuaded, that “he could lose an arm without a tear, or, with a few groans, be quartered to pieces,” I am not sure that he felt in himself any uncommon powers of endurance; or, indeed, any thing more than a sudden effervescence of imagination, which, uncertain and involuntary as it is, he mistook for settled resolution.

BROWNE

“That there were not many extant, that, in a noble way, feared the face of death less than himself,” he might, likewise, believe at a very easy expense, while death was yet at a distance; but the time will come, to every human being, when it must be known how well he can bear to die; and it has appeared that our author’s fortitude did not desert him in the great hour of trial.

It was observed, by some of the remarkers on the *Religio Medici*, that “the author was yet alive, and might grow worse as well as better:” it is, therefore, happy, that this suspicion can be obviated by a testimony given to the continuance of his virtue, at a time when death had set him free from danger of change, and his panegyrist from temptation to flattery.

But it is not on the praises of others, but on his own writings, that he is to depend for the esteem of posterity; of which he will not easily be deprived, while learning shall have any reverence among men; for there is no science in which he does not discover some skill; and scarce any kind of knowledge, profane or sacred, abstruse or elegant, which he does not appear to have cultivated with success.

His exuberance of knowledge, and plentitude of ideas, sometimes obstruct the tendency of his reasoning and the clearness of his decisions: on whatever subject he employed his mind, there started up immediately so many images before him, that he lost one by grasping another. His memory supplied him with so many illustrations, parallel or dependent notions, that he was always starting into

BROWNE

collateral considerations; but the spirit and vigour of his pursuit always gives delight; and the reader follows him, without reluctance, through his mazes, in themselves flowery and pleasing, and ending at the point originally in view.

“To have great excellencies and great faults, ‘*magnæ virtutes nec minora vitia,*’ is the poesy,” says our author, “of the best natures.” This poesy may be properly applied to the style of Browne; it is vigorous, but rugged; it is learned, but pedantick; it is deep, but obscure; it strikes, but does not please; it commands, but does not allure; his tropes are harsh, and his combinations uncouth.

He fell into an age in which our language began to lose the stability which it had obtained in the time of Elizabeth; and was considered by every writer as a subject on which he might try his plastic skill, by moulding it according to his own fancy. Milton, in consequence of this encroaching license, began to introduce the Latin idiom: and Browne, though he gave less disturbance to our structures in phraseology, yet poured in a multitude of exotic words; many, indeed, useful and significant, which, if rejected, must be supplied by circumlocution, such as *commensality*, for the state of many living at the same table; but many superfluous, as a *paralogical*, for an unreasonable doubt; and some so obscure, that they conceal his meaning rather than explain it, as *arthritical analogies*, for parts that serve some animals in the place of joints.

His style is, indeed, a tissue of many languages; a mixture of heterogeneous words, brought to-

BROWNE

gether from distant regions, with terms originally appropriated to one art, and drawn by violence into the service of another. He must, however, be confessed to have augmented our philosophical diction; and, in defence of his uncommon words and expressions, we must consider, that he had uncommon sentiments, and was not content to express, in many words, that idea for which any language could supply a single term.

But his innovations are sometimes pleasing, and his temerities happy: he has many "verba ardentia" forcible expressions, which he would never have found, but by venturing to the utmost verge of propriety; and flights which would never have been reached, but by one who had very little fear of the shame of falling.

There remains yet an objection against the writings of Browne, more formidable than the animadversions of criticism. There are passages from which some have taken occasion to rank him among deists, and others among atheists. It would be difficult to guess how any such conclusion should be formed, had not experience shown that there are two sorts of men willing to enlarge the catalogue of infidels.

It has been long observed, that an atheist has no just reason for endeavouring conversions; and yet none harass those minds which they can influence, with more importunity of solicitation to adopt their opinions. In proportion as they doubt the truth of their own doctrines, they are desirous to gain the attestation of another understanding: and industri-

BROWNE

ously labour to win a proselyte, and eagerly catch at the slightest pretence to dignify their sect with a celebrated name^z.

The others become friends to infidelity only by unskilful hostility; men of rigid orthodoxy, cautious conversation, and religious asperity. Among these, it is, too frequently, the practice to make in their heat concessions to atheism or deism, which their most confident advocates had never dared to claim, or to hope. A sally of levity, an idle paradox, an indecent jest, an unreasonable objection, are sufficient, in the opinion of these men, to efface a name from the lists of christianity, to exclude a soul from everlasting life. Such men are so watchful to censure, that they have seldom much care to look for favourable interpretations of ambiguities, to set the general tenour of life against single failures, or to know how soon any slip of inadvertency has been expiated by sorrow and retraction; but let fly their fulminations, without mercy or prudence, against slight offences or casual temerities, against crimes never committed, or immediately repented.

The infidel knows well what he is doing. He is endeavouring to supply, by authority, the deficiency of his arguments, and to make his cause less invidious, by showing numbers on his side; he will, therefore, not change his conduct, till he reforms his principles. But the zealot should recollect, that he is labouring by this frequency of excommunication,

z Therefore no hereticks desire to spread
Their wild opinions like these epicures.
For so their staggering thoughts are computed,
And other men's assent their doubt assures.

DAVIES.

BROWNE

against his own cause, and voluntarily adding strength to the enemies of truth. It must always be the condition of a great part of mankind, to reject and embrace tenets upon the authority of those whom they think wiser than themselves; and, therefore, the addition of every name to infidelity, in some degree, invalidates that argument upon which the religion of multitudes is necessarily founded.

Men may differ from each other in many religious opinions, and yet all may retain the essentials of christianity; men may sometimes eagerly dispute, and yet not differ much from one another: the rigorous persecutors of error should, therefore, enlighten their zeal with knowledge, and temper their orthodoxy with charity; that charity, without which orthodoxy is vain; charity that “thinketh no evil,” but “hopeth all things,” and “endureth all things.”

Whether Browne has been numbered among the contemners of religion, by the fury of its friends, or the artifice of its enemies, it is no difficult task to replace him among the most zealous professors of christianity. He may, perhaps, in the ardour of his imagination, have hazarded an expression, which a mind intent upon faults may interpret into heresy, if considered apart from the rest of his discourse; but a phrase is not to be opposed to volumes; there is scarcely a writer to be found, whose profession was not divinity, that has so frequently testified his belief of the sacred writings, has appealed to them with such unlimited submission, or mentioned them with such unvaried reverence.

It is, indeed, somewhat wonderful, that he should be placed without the pale of christianity, who de-

BROWNE

clares, “ that he assumes the honourable style of a christian,” not because it is “ the religion of his country,” but because “ having in his riper years and confirmed judgment seen and examined all, he finds himself obliged, by the principles of grace, and the law of his own reason, to embrace no other name but this;” who, to specify his persuasion yet more, tells us, that “ he is of the reformed religion; of the same belief our Saviour taught, the apostles disseminated, the fathers authorized, and the martyrs confirmed;” who, though “ paradoxical in philosophy, loves in divinity to keep the beaten road; and pleases himself that he has no taint of heresy, schism, or error:” to whom, “ where the scripture is silent, the church is a text; where that speaks, ’tis but a comment;” and who uses not “ the dictates of his own reason, but where there is a joint silence of both: who blesses himself, that he lived not in the days of miracles, when faith had been thrust upon him; but enjoys that greater blessing, pronounced to all that believe and saw not.” He cannot surely be charged with a defect of faith, who “ believes that our Saviour was dead, and buried, and rose again, and desires to see him in his glory:” and who affirms that “ this is not much to believe;” that “ we have reason to owe this faith unto history;” and that “ they only had the advantage of a bold and noble faith, who lived before his coming; and, upon obscure prophecies, and mystical types, could raise a belief.” Nor can contempt of the positive and ritual parts of religion be imputed to him, who doubts, whether a good man would

ASCHAM

refuse a poisoned eucharist; and “who would violate his own arm, rather than a church.”

The opinions of every man must be learned from himself: concerning his practice, it is safest to trust the evidence of others. Where these testimonies concur, no higher degree of historical certainty can be obtained; and they apparently concur to prove, that Browne was a zealous adherent to the faith of Christ; that he lived in obedience to his laws, and died in confidence of his mercy.

ASCHAM^a

It often happens to writers, that they are known only by their works; the incidents of a literary life are seldom observed, and, therefore, seldom recounted: but Ascham has escaped the common fate by the friendship of Edward Graunt, the learned master of Westminster school, who devoted an oration to his memory, and has marked the various vicissitudes of his fortune. Graunt either avoided the labour of minute inquiry, or thought domestick occurrences unworthy of his notice; or, preferring the character of an orator to that of an historian, selected only such particulars as he could best express or most happily embellish. His narrative is, therefore, scanty, and I know not by what materials it can now be amplified.

Roger Ascham was born in the year 1515, at Kirby Wiske, (or Kirby Wicke,) a village near Northallerton, in Yorkshire, of a family above the vulgar. His father, John Ascham, was house-

^a First printed before his Works in 4to. published by Bennet, 1763.

ASCHAM

steward in the family of Scroop; and, in that age, when the different orders of men were at a greater distance from each other, and the manners of gentlemen were regularly formed by menial services in great houses, lived with a very conspicuous reputation. Margaret Ascham, his wife, is said to have been allied to many considerable families, but her maiden name is not recorded. She had three sons, of whom Roger was the youngest, and some daughters; but who can hope, that of any progeny more than one shall deserve to be mentioned? They lived married sixty-seven years, and, at last, died together almost on the same hour of the same day.

Roger, having passed his first years under the care of his parents, was adopted into the family of Antony Wingfield, who maintained him, and committed his education, with that of his own sons, to the care of one Bond, a domestick tutor. He very early discovered an unusual fondness for literature by an eager perusal of English books; and, having passed happily through the scholastick rudiments, was put, in 1530, by his patron Wingfield, to St. John's college in Cambridge.

Ascham entered Cambridge at a time when the last great revolution of the intellectual world was filling every academical mind with ardour or anxiety. The destruction of the Constantinopolitan empire had driven the Greeks, with their language, into the interior parts of Europe, the art of printing had made the books easily attainable, and Greek now began to be taught in England. The doctrines of Luther had already filled all the nations

ASCHAM

of the Romish communion with controversy and dissension. New studies of literature, and new tenets of religion, found employment for all who were desirous of truth, or ambitious of fame. Learning was, at that time, prosecuted with that eagerness and perseverance, which, in this age of indifference and dissipation, it is not easy to conceive. To teach or to learn, was, at once, the business and the pleasure of the academical life; and an emulation of study was raised by Cheke and Smith, to which even the present age, perhaps, owes many advantages, without remembering, or knowing, its benefactors.

Ascham soon resolved to unite himself to those who were enlarging the bounds of knowledge, and, immediately upon his admission into the college, applied himself to the study of Greek. Those who were zealous for the new learning, were often no great friends to the old religion; and Ascham, as he became a Grecian, became a protestant. The reformation was not yet begun; disaffection to popery was considered as a crime justly punished by exclusion from favour and preferment, and was not yet openly professed, though superstition was gradually losing its hold upon the publick. The study of Greek was reputable enough, and Ascham pursued it with diligence and success, equally conspicuous. He thought a language might be most easily learned by teaching it; and, when he had obtained some proficiency in Greek, read lectures, while he was yet a boy, to other boys, who were desirous of instruction. His industry was much encouraged by Pember, a man

ASCHAM

of great eminence at that time, though I know not that he has left any monuments behind him, but what the gratitude of his friends and scholars has bestowed. He was one of the great encouragers of Greek learning, and particularly applauded Ascham's lectures, assuring him in a letter, of which Graunt has preserved an extract, that he would gain more knowledge by explaining one of Æsop's fables to a boy, than by hearing one of Homer's poems explained by another.

Ascham took his bachelor's degree in 1534, February 18, in the eighteenth year of his age; a time of life at which it is more common now to enter the universities, than to take degrees, but which, according to the modes of education then in use, had nothing of remarkable prematurity. On the 23rd of March following, he was chosen fellow of the college, which election he considered as a second birth. Dr. Metcalf, the master of the college, a man, as Ascham tells us, "meanly learned himself, but no mean encourager of learning in others," clandestinely promoted his election, though he openly seemed first to oppose it, and afterwards to censure it, because Ascham was known to favour the new opinions; and the master himself was accused of giving an unjust preference to the northern men, one of the factions into which this nation was divided, before we could find any more important reason of dissension, than that some were born on the northern, and some on the southern side of Trent. Any cause is sufficient for a quarrel; and the zealots of the north and south lived long in such

ASCHAM

animosity, that it was thought necessary at Oxford to keep them quiet, by choosing one proctor every year from each.

He seems to have been, hitherto, supported by the bounty of Wingfield, which his attainment of a fellowship now freed him from the necessity of receiving. Dependance, though in those days it was more common and less irksome, than in the present state of things, can never have been free from discontent; and, therefore, he that was released from it must always have rejoiced. The danger is, lest the joy of escaping from the patron may not leave sufficient memory of the benefactor. Of this forgetfulness, Ascham cannot be accused; for he is recorded to have preserved the most grateful and affectionate reverence for Wingfield, and to have never grown weary of recounting his benefits.

His reputation still increased, and many resorted to his chamber to hear the Greek writers explained. He was, likewise, eminent for other accomplishments. By the advice of Pember, he had learned to play on musical instruments, and he was one of the few who excelled in the mechanical art of writing, which then began to be cultivated among us, and in which we now surpass all other nations. He not only wrote his pages with neatness, but embellished them with elegant draughts and illuminations; an art at that time so highly valued, that it contributed much both to his fame and his fortune.

He became master of arts in March, 1537, in his twenty-first year, and then, if not before, commenced tutor, and publickly undertook the education of

ASCHAM

young men. A tutor of one-and-twenty, however accomplished with learning, however exalted by genius, would now gain little reverence or obedience; but in those days of discipline and regularity, the authority of the statutes easily supplied that of the teacher; all power that was lawful was revered. Besides, young tutors had still younger pupils.

Ascham is said to have courted his scholars to study by every incitement, to have treated them with great kindness, and to have taken care, at once, to instil learning and piety, to enlighten their minds, and to form their manners. Many of his scholars rose to great eminence; and among them William Grindal was so much distinguished, that, by Cheke's recommendation, he was called to court, as a proper master of languages for the lady Elizabeth.

There was yet no established lecturer of Greek; the university, therefore, appointed Ascham to read in the open schools, and paid him out of the publick purse an honorary stipend, such as was then reckoned sufficiently liberal. A lecture was afterwards founded by king Henry, and he then quitted the schools, but continued to explain Greek authors in his own college.

He was at first an opponent of the new pronunciation introduced, or rather of the ancient restored, about this time, by Cheke and Smith, and made more cautious struggles for the common practice, which the credit and dignity of his antagonists did not permit him to defend very publickly, or with much vehemence: nor were they long his antagonists; for

REV. W. L. BOWLES

ASCHAM

either his affection for their merit, or his conviction of the cogency of their arguments, soon changed his opinion and his practice, and he adhered ever after to their method of utterance.

Of this controversy it is not necessary to give a circumstantial account; something of it may be found in Strype's *Life of Smith*, and something in Baker's *Reflections upon Learning*; it is sufficient to remark here, that Cheke's pronunciation was that which now prevails in the schools of England. Disquisitions not only verbal, but merely literal, are too minute for popular narration.

He was not less eminent, as a writer of Latin, than as a teacher of Greek. All the publick letters of the university were of his composition; and, as little qualifications must often bring great abilities into notice, he was recommended to this honourable employment, not less by the neatness of his hand, than the elegance of his style.

However great was his learning, he was not always immured in his chamber; but, being valetudinary, and weak of body, thought it necessary to spend many hours in such exercises as might best relieve him after the fatigue of study. His favourite amusement was archery, in which he spent, or, in the opinion of others, lost so much time, that those whom either his faults or virtues made his enemies, and, perhaps, some whose kindness wished him always worthily employed, did not scruple to censure his practice, as unsuitable to a man professing learning, and, perhaps, of bad example in a place of education.

ASCHAM

To free himself from this censure was one of the reasons for which he published, in 1544, his *Toxophilus*, or the *Schole* or *Partitions* of *Shooting*, in which he joins the praise with the precepts of archery. He designed not only to teach the art of shooting, but to give an example of diction more natural and more truly English than was used by the common writers of that age, whom he censures for mingling exotick terms with their native language, and of whom he complains, that they were made authors, not by skill or education, but by arrogance and temerity.

He has not failed in either of his purposes. He has sufficiently vindicated archery as an innocent, salutary, useful, and liberal diversion; and if his precepts are of no great use, he has only shown, by one example among many, how little the hand can derive from the mind, how little intelligence can conduce to dexterity. In every art, practice is much; in arts manual, practice is almost the whole: precept can, at most, but warn against error; it can never bestow excellence.

The bow has been so long disused, that most English readers have forgotten its importance, though it was the weapon by which we gained the battle of Agincourt; a weapon which, when handled by English yeomen, no foreign troops were able to resist. We were not only abler of body than the French, and, therefore, superiour in the use of arms, which are forcible only in proportion to the strength with which they are handled, but the national practice of shooting for pleasure or for prizes,

ASCHAM

by which every man was inured to archery from his infancy, gave us insuperable advantage, the bow requiring more practice to skilful use than any other instrument of offence.

Firearms were then in their infancy; and though battering-pieces had been some time in use, I know not whether any soldiers were armed with hand-guns when the *Toxophilus* was first published. They were soon after used by the Spanish troops, whom other nations made haste to imitate; but how little they could yet effect, will be understood from the account given by the ingenious author of the *Exercise for the Norfolk Militia*.

“The first muskets were very heavy, and could not be fired without a rest; they had matchlocks, and barrels of a wide bore, that carried a large ball and charge of powder, and did execution at a greater distance.

“The musketeers on a march carried only their rests and ammunition, and had boys to bear their muskets after them, for which they were allowed great additional pay.

“They were very slow in loading, not only by reason of the unwieldiness of the pieces, and because they carried the powder and balls separate, but from the time it took to prepare and adjust the match; so that their fire was not near so brisk as ours is now. Afterwards a lighter kind of matchlock musket came into use, and they carried their ammunition in bandeliers, which were broad belts that came over the shoulder, to which were hung several little cases of wood covered with leather,

ASCHAM

each containing a charge of powder; the balls they carried loose in a pouch; and they had also a priming-horn hanging by their side.

“The old English writers call those large muskets calivers; the harquebuss was a lighter piece, that could be fired without a rest. The matchlock was fired by a match fixed by a kind of tongs in the serpentine or cock, which, by pulling the trigger, was brought down with great quickness upon the priming in the pan, over which there was a sliding cover, which was drawn back by the hand just at the time of firing. There was a great deal of nicety and care required to fit the match properly to the cock, so as to come down exactly true on the priming, to blow the ashes from the coal, and to guard the pan from the sparks that fell from it. A great deal of time was also lost in taking it out of the cock, and returning it between the fingers of the left hand every time that the piece was fired; and wet weather often rendered the matches useless.”

While this was the state of firearms, and this state continued among us to the civil war, with very little improvement, it is no wonder that the long-bow was preferred by sir Thomas Smith, who wrote of the choice of weapons in the reign of queen Elizabeth, when the use of the bow still continued, though the musket was gradually prevailing. Sir John Haward, a writer yet later, has, in his History of the Norman Kings, endeavoured to evince the superiority of the archer to the musketeer: however, in the long peace of king James, the

ASCHAM

bow was wholly forgotten. Guns have from that time been the weapons of the English, as of other nations, and, as they are now improved, are certainly more efficacious.

Ascham had yet another reason, if not for writing his book, at least for presenting it to king Henry. England was not then, what it may be now justly termed, the capital of literature; and, therefore, those who aspired to superiour degrees of excellence, thought it necessary to travel into other countries. The purse of Ascham was not equal to the expense of peregrination; and, therefore, he hoped to have it augmented by a pension. Nor was he wholly disappointed; for the king rewarded him with a yearly payment of ten pounds.

A pension of ten pounds granted by a king of England to a man of letters, appears to modern readers, so contemptible a benefaction, that it is not unworthy of inquiry what might be its value at that time, and how much Ascham might be enriched by it. Nothing is more uncertain than the estimation of wealth by denominated money; the precious metals never retain long the same proportion to real commodities, and the same names in different ages do not imply the same quantity of metal; so that it is equally difficult to know how much money was contained in any nominal sum, and to find what any supposed quantity of gold or silver would purchase; both which are necessary to the commensuration of money, or the adjustment of proportion between the same sums at different periods of time.

ASCHAM

A numeral pound, in king Henry's time, contained, as now, twenty shillings; and, therefore, it must be inquired what twenty shillings could perform. Bread-corn is the most certain standard of the necessaries of life. Wheat was generally sold, at that time for one shilling, the bushel; if, therefore, we take five shillings the bushel for the current price, ten pounds were equivalent to fifty. But here is danger of a fallacy. It may be doubted whether wheat was the general bread-corn of that age; and if rye, barley, or oats, were the common food, and wheat, as I suspect, only a delicacy, the value of wheat will not regulate the price of other things. This doubt, however, is in favour of Ascham; for if we raise the worth of wheat, we raise that of his pension.

But the value of money has another variation, which we are still less able to ascertain: the rules of custom, or the different needs of artificial life, make that revenue little at one time which is great at another. Men are rich and poor, not only in proportion to what they have, but to what they want. In some ages, not only necessaries are cheaper, but fewer things are necessary. In the age of Ascham, most of the elegancies and expenses of our present fashions were unknown: commerce had not yet distributed superfluity through the lower classes of the people, and the character of a student implied frugality, and required no splendour to support it. His pension, therefore, reckoning together the wants which he could supply, and the wants from which he was exempt, may be estimated, in my opinion,

ASCHAM

at more than one hundred pounds a year; which, added to the income of his fellowship, put him far enough above distress.

This was a year of good fortune to Ascham. He was chosen orator to the university on the removal of sir John Cheke to court, where he was made tutor to prince Edward. A man once distinguished soon gains admirers. Ascham was now received to notice by many of the nobility, and by great ladies, among whom it was then the fashion to study the ancient languages. Lee, archbishop of York, allowed him a yearly pension; how much we are not told. He was, probably, about this time, employed in teaching many illustrious persons to write a fine hand; and, among others, Henry and Charles, dukes of Suffolk, the princess Elizabeth, and prince Edward.

Henry the eighth died two years after, and a reformation of religion being now openly prosecuted by king Edward and his council, Ascham, who was known to favour it, had a new grant of his pension, and continued at Cambridge, where he lived in great familiarity with Bucer, who had been called from Germany to the professorship of divinity. But his retirement was soon at an end; for, in 1548, his pupil, Grindal, the master of the princess Elizabeth, died, and the princess, who had already some acquaintance with Ascham, called him from his college to direct her studies. He obeyed the summons, as we may easily believe, with readiness, and, for two years, instructed her with great diligence; but then, being disgusted either at her, or her domes-

ASCHAM

ticks, perhaps eager for another change of life, he left her, without her consent, and returned to the university. Of this precipitation he long repented; and, as those who are not accustomed to disrespect cannot easily forgive it, he probably felt the effects of his imprudence to his death.

After having visited Cambridge, he took a journey into Yorkshire, to see his native place, and his old acquaintance, and there received a letter from the court, informing him, that he was appointed secretary to sir Richard Morisine, who was to be despatched as ambassadour into Germany. In his return to London he paid that memorable visit to lady Jane Gray, in which he found her reading the *Phædo* in Greek, as he has related in his *Schoolmaster*.

In September, 1550, he attended Morisine to Germany, and wandered over great part of the country, making observations upon all that appeared worthy of his curiosity, and contracting acquaintance with men of learning. To his correspondent, Sturmius, he paid a visit, but Sturmius was not at home, and those two illustrious friends never saw each other. During the course of this embassy, Ascham undertook to improve Morisine in Greek, and, for four days in the week, explained some passages in Herodotus every morning, and more than two hundred verses of Sophocles, or Euripides, every afternoon. He read with him, likewise, some of the orations of Demosthenes. On the other days he compiled the letters of business, and in the night filled up his diary, digested his remarks,

ASCHAM

and wrote private letters to his friends in England, and particularly to those of his college, whom he continually exhorted to perseverance in study. Amidst all the pleasures of novelty which his travels supplied, and in the dignity of his publick station, he preferred the tranquillity of private study, and the quiet of academical retirement. The reasonableness of this choice has been always disputed; and in the contrariety of human interests and dispositions, the controversy will not easily be decided.

He made a short excursion into Italy, and mentions in his Schoolmaster, with great severity, the vices of Venice. He was desirous of visiting Trent, while the council were sitting; but the scantiness of his purse defeated his curiosity.

In this journey he wrote his Report and Discourse of the Affairs in Germany, in which he describes the dispositions and interests of the German princes, like a man inquisitive and judicious, and recounts many particularities, which are lost in the mass of general history, in a style, which, to the ears of that age, was undoubtedly mellifluous, and which is now a very valuable specimen of genuine English.

By the death of king Edward, in 1553, the reformation was stopped, Morisine was recalled, and Ascham's pension and hopes were at an end. He, therefore, retired to his fellowship in a state of disappointment and despair, which his biographer has endeavoured to express in the deepest strain of plaintive declamation. "He was deprived of all his support," says Graunt, "stripped of his pension,

ASCHAM

and cut off from the assistance of his friends, who had now lost their influence: so that he had *nec præmia nec prædia*, neither pension nor estate to support him at Cambridge." There is no credit due to a rhetorician's account either of good or evil. The truth is, that Ascham still had, in his fellowship, all that in the early part of his life had given him plenty, and might have lived like the other inhabitants of the college, with the advantage of more knowledge and higher reputation. But, notwithstanding his love of academical retirement, he had now too long enjoyed the pleasures and festivities of publick life, to return with a good will to academical poverty.

He had, however, better fortune than he expected; and, if he lamented his condition, like his historian, better than he deserved. He had, during his absence in Germany, been appointed Latin secretary to king Edward; and, by the interest of Gardiner, bishop of Winchester, he was instated in the same office under Philip and Mary, with a salary of twenty pounds a year.

Soon after his admission to his new employment, he gave an extraordinary specimen of his abilities and diligence, by composing and transcribing, with his usual elegance, in three days, forty-seven letters to princes and personages, of whom cardinals were the lowest.

How Ascham, who was known to be a protestant, could preserve the favour of Gardiner, and hold a place of honour and profit in queen Mary's court, it must be very natural to inquire. Cheke, as is well

ASCHAM

known, was compelled to a recantation; and why Ascham was spared, cannot now be discovered. Graunt, at a time when the transactions of queen Mary's reign must have been well enough remembered, declares, that Ascham always made open profession of the reformed religion, and that Englesfield and others often endeavoured to incite Gardiner against him, but found their accusations rejected with contempt: yet he allows, that suspicions and charges of temporization and compliance, had somewhat sullied his reputation. The author of the *Biographia Britannica* conjectures, that he owed his safety to his innocence and usefulness; that it would have been unpopular to attack a man so little liable to censure, and that the loss of his pen could not have been easily supplied. But the truth is, that morality was never suffered, in the days of persecution, to protect heresy: nor are we sure that Ascham was more clear from common failings than those who suffered more; and, whatever might be his abilities, they were not so necessary, but Gardiner could have easily filled his place with another secretary. Nothing is more vain, than, at a distant time, to examine the motives of discrimination and partiality; for the inquirer, having considered interest and policy, is obliged, at last, to admit more frequent and more active motives of human conduct, caprice, accident, and private affections.

At that time, if some were punished, many were forborne; and of many why should not Ascham happen to be one? He seems to have been calm and prudent, and content with that peace which he was

ASCHAM

suffered to enjoy: a mode of behaviour that seldom fails to produce security. He had been abroad in the last years of king Edward, and had, at least, given no recent offence. He was certainly, according to his own opinion, not much in danger; for in the next year he resigned his fellowship, which, by Gardiner's favour, he had continued to hold, though not resident; and married Margaret Howe, a young gentlewoman of a good family.

He was distinguished in this reign by the notice of cardinal Pole, a man of great candour, learning, and gentleness of manners, and particularly eminent for his skill in Latin, who thought highly of Ascham's style; of which it is no inconsiderable proof, that when Pole was desirous of communicating a speech made by himself as legate, in parliament, to the pope, he employed Ascham to translate it.

He is said to have been not only protected by the officers of state, but favoured and countenanced by the queen herself, so that he had no reason of complaint in that reign of turbulence and persecution: nor was his fortune much mended, when, in 1558, his pupil, Elizabeth, mounted the throne. He was continued in his former employment, with the same stipend; but though he was daily admitted to the presence of the queen, assisted her private studies, and partook of her diversions; sometimes read to her in the learned languages, and sometimes played with her at draughts and chess; he added nothing to his twenty pounds a year but the prebend of Westwang, in the church of York, which was given him the year following. His fortune was, therefore, not

ASCHAM

proportionate to the rank which his offices and reputation gave him, or to the favour in which he seemed to stand with his mistress. Of this parsimonious allotment it is again a hopeless search to inquire the reason. The queen was not naturally bountiful, and, perhaps, did not think it necessary to distinguish, by any prodigality of kindness, a man who had formerly deserted her, and whom she might still suspect of serving rather for interest than affection. Graunt exerts his rhetorical powers in praise of Ascham's disinterestedness and contempt of money; and declares, that, though he was often reproached by his friends with neglect of his own interest, he never would ask any thing, and inflexibly refused all presents which his office or imagined interest induced any to offer him. Camden, however, imputes the narrowness of his condition to his love of dice and cock-fights: and Graunt, forgetting himself, allows that Ascham was sometimes thrown into agonies by disappointed expectations. It may be easily discovered, from his Schoolmaster, that he felt his wants, though he might neglect to supply them; and we are left to suspect, that he showed his contempt of money only by losing at play. If this was his practice, we may excuse Elizabeth, who knew the domestick character of her servants, if she did not give much to him who was lavish of a little.

However he might fail in his economy, it were indecent to treat with wanton levity the memory of a man who shared his frailties with all, but whose learning or virtues few can attain, and by whose ex-

ASCHAM

cellencies many may be improved, while himself only suffered by his faults.

In the reign of Elizabeth, nothing remarkable is known to have befallen him, except that, in 1563, he was invited, by sir Edward Sackville, to write the *Schoolmaster*, a treatise on education, upon an occasion which he relates in the beginning of the book.

This work, though begun with alacrity, in hopes of a considerable reward, was interrupted by the death of the patron, and afterwards sorrowfully and slowly finished, in the gloom of disappointment, under the pressure of distress. But of the author's disinclination or dejection there can be found no tokens in the work, which is conceived with great vigour, and finished with great accuracy; and, perhaps, contains the best advice that was ever given for the study of languages.

This treatise he completed, but did not publish; for that poverty which, in our days, drives authors so hastily in such numbers to the press, in the time of Ascham, I believe, debarred them from it. The printers gave little for a copy, and, if we may believe the tale of Raleigh's history, were not forward to print what was offered them for nothing. Ascham's book, therefore, lay unseen in his study, and was, at last, dedicated to lord Cecil by his widow.

Ascham never had a robust or vigorous body, and his excuse for so many hours of diversion was his inability to endure a long continuance of sedentary thought. In the latter part of his life he

ASCHAM

found it necessary to forbear any intense application of the mind from dinner to bedtime, and rose to read and write early in the morning. He was, for some years, hectically feverish; and, though he found some alleviation of his distemper, never obtained a perfect recovery of his health. The immediate cause of his last sickness was too close application to the composition of a poem, which he purposed to present to the queen, on the day of her accession. To finish this, he forbore to sleep at his accustomed hours, till, in December, 1568, he fell sick of a kind of lingering disease, which Graunt has not named, nor accurately described. The most afflictive symptom was want of sleep, which he endeavoured to obtain by the motion of a cradle. Growing every day weaker, he found it vain to contend with his distemper, and prepared to die with the resignation and piety of a true christian. He was attended on his death-bed by Gravet, vicar of St. Sepulchre, and Dr. Nowel, the learned dean of St. Paul's, who gave ample testimony to the decency and devotion of his concluding life. He frequently testified his desire of that dissolution which he soon obtained. His funeral sermon was preached by Dr. Nowel.

Roger Ascham died in the fifty-third year of his age, at a time when, according to the general course of life, much might yet have been expected from him, and when he might have hoped for much from others: but his abilities and his wants were at an end together; and who can determine, whether he was cut off from advantages, or rescued from cala-

ASCHAM

mities? He appears to have been not much qualified for the improvement of his fortune. His disposition was kind and social; he delighted in the pleasures of conversation, and was probably not much inclined to business. This may be suspected from the paucity of his writings. He has left little behind him; and of that little, nothing was published by himself but the *Toxophilus*, and the account of Germany. The *Schoolmaster* was printed by his widow; and the epistles were collected by Graunt, who dedicated them to queen Elizabeth, that he might have an opportunity of recommending his son, Giles Ascham, to her patronage. The dedication was not lost: the young man was made, by the queen's mandate, fellow of a college in Cambridge, where he obtained considerable reputation. What was the effect of his widow's dedication to Cecil, is not known: it may be hoped that Ascham's works obtained for his family, after his decease, that support which he did not, in his life, very plentifully procure them.

Whether he was poor by his own fault, or the fault of others, cannot now be decided; but it is certain that many have been rich with less merit. His philological learning would have gained him honour in any country; and, among us, it may justly call for that reverence which all nations owe to those who first rouse them from ignorance, and kindle among them the light of literature. Of his manners, nothing can be said but from his own testimony, and that of his contemporaries. Those who mention him allow him many virtues. His courtesy,

ASCHAM

benevolence, and liberality, are celebrated; and of his piety, we have not only the testimony of his friends, but the evidence of his writings.

That his English works have been so long neglected, is a proof of the uncertainty of literary fame. He was scarcely known, as an author, in his own language, till Mr. Upton published his *Schoolmaster*, with learned notes. His other pieces were read only by those few who delight in obsolete books; but as they are now collected into one volume, with the addition of some letters never printed before, the publick has an opportunity of recompensing the injury, and allotting Ascham the reputation due to his knowledge and his eloquence.

A JOURNEY TO THE WESTERN ISLANDS OF SCOTLAND

I HAD desired to visit the Hebrides, or Western Islands of Scotland, so long, that I scarcely remember how the wish was originally excited; and was, in the autumn of the year 1773, induced to undertake the journey, by finding in Mr. Boswell a companion, whose acuteness would help my inquiry, and whose gaiety of conversation and civility of manners are sufficient to counteract the inconveniences of travel, in countries less hospitable than we have passed.

On the eighteenth of August, we left Edinburgh, a city too well known to admit description, and directed our course northward, along the eastern coast of Scotland, accompanied the first day by another gentleman, who could stay with us only long enough to show us how much we lost at separation.

As we crossed the frith of Forth, our curiosity was attracted by Inch Keith, a small island, which neither of my companions had ever visited, though, lying within their view, it had all their lives solicited their notice. Here, by climbing, with some difficulty, over shattered crags, we made the first experiment of unfrequented coasts. Inch Keith is nothing more than a rock covered with a thin layer of earth, not wholly bare of grass, and very fertile of thistles. A small herd of cows grazes annually upon it in the summer. It seems never to have afforded to man or beast a permanent habitation.

We found only the ruins of a small fort, not so injured by time but that it might be easily restored to its former state. It seems never to have been in-

A JOURNEY TO THE HEBRIDES

tended as a place of strength, nor was built to endure a siege, but merely to afford cover to a few soldiers, who, perhaps, had the charge of a battery, or were stationed to give signals of approaching danger. There is, therefore, no provision of water within the walls, though the spring is so near, that it might have been easily enclosed. One of the stones had this inscription: "Maria Reg. 1564." It has probably been neglected from the time that the whole island had the same king.

We left this little island, with our thoughts employed awhile on the different appearance that it would have made, if it had been placed at the same distance from London, with the same facility of approach; with what emulation of price a few rocky acres would have been purchased, and with what expensive industry they would have been cultivated and adorned.

When we landed, we found our chaise ready, and passed through Kinghorn, Kirkaldy, and Cowpar, places not unlike the small or straggling market-towns in those parts of England where commerce and manufactures have not yet produced opulence.

Though we were yet in the most populous part of Scotland, and at so small a distance from the capital, we met few passengers.

The roads are neither rough nor dirty; and it affords a southern stranger a new kind of pleasure to travel so commodiously without the interruption of tollgates. Where the bottom is rocky, as it seems commonly to be in Scotland, a smooth way is made, indeed, with great labour, but it never wants repairs;

A JOURNEY TO THE HEBRIDES

and in those parts where adventitious materials are necessary, the ground, once consolidated, is rarely broken; for the inland commerce is not great, nor are heavy commodities often transported otherwise than by water. The carriages in common use are small carts, drawn each by one little horse; and a man seems to derive some degree of dignity and importance from the reputation of possessing a two-horse cart.

At an hour somewhat late we came to St. Andrews, a city once archiepiscopal; where that university still subsists in which philosophy was formerly taught by Buchanan, whose name has as fair a claim to immortality as can be conferred by modern latinity, and perhaps a fairer than the instability of vernacular languages admits.

We found that, by the interposition of some invisible friend, lodgings had been provided for us at the house of one of the professors, whose easy civility quickly made us forget that we were strangers; and in the whole time of our stay we were gratified by every mode of kindness, and entertained with all the elegance of lettered hospitality.

In the morning, we rose to perambulate a city, which only history shows to have once flourished, and surveyed the ruins of ancient magnificence, of which even the ruins cannot long be visible, unless some care be taken to preserve them; and where is the pleasure of preserving such mournful memorials? They have been, till very lately, so much

A JOURNEY TO THE HEBRIDES

neglected, that every man carried away the stones who fancied that he wanted them.

The cathedral, of which the foundations may be still traced, and a small part of the wall is standing, appears to have been a spacious and majestick building, not unsuitable to the primacy of the kingdom. Of the architecture, the poor remains can hardly exhibit, even to an artist, a sufficient specimen. It was demolished, as is well known, in the tumult and violence of Knox's reformation.

Not far from the cathedral, on the margin of the water, stands a fragment of the castle, in which the archbishop anciently resided. It was never very large, and was built with more attention to security than pleasure. Cardinal Beatoun is said to have had workmen employed in improving its fortifications, at the time when he was murdered by the ruffians of reformation, in the manner of which Knox has given what he himself calls a merry narrative.

The change of religion in Scotland, eager and vehement as it was, raised an epidemical enthusiasm, compounded of sullen scrupulousness and warlike ferocity, which, in a people whom idleness resigned to their own thoughts, and who, conversing only with each other, suffered no dilution of their zeal from the gradual influx of new opinions, was long transmitted, in its full strength, from the old to the young, but, by trade and intercourse with England, is now visibly abating, and giving way too fast to that laxity of practice, and indifference of opinion, in which men, not sufficiently

A JOURNEY TO THE HEBRIDES

instructed to find the middle point, too easily shelter themselves from rigour and constraint.

The city of St. Andrews, when it had lost its archiepiscopal preeminence, gradually decayed. One of its streets is now lost; and in those that remain, there is the silence and solitude of inactive indigence and gloomy depopulation.

The university, within a few years, consisted of three colleges, but is now reduced to two; the college of St. Leonard being lately dissolved by the sale of its buildings, and the appropriation of its revenues to the professors of the two others. The chapel of the alienated college is yet standing, a fabrick not inelegant of external structure; but I was always, by some civil excuse, hindered from entering it. A decent attempt, as I was since told, has been made to convert it into a kind of greenhouse, by planting its area with shrubs. This new method of gardening is unsuccessful; the plants do not hitherto prosper. To what use it will next be put, I have no pleasure in conjecturing. It is something, that its present state is, at least, not ostentatiously displayed. Where there is yet shame, there may in time be virtue.

The dissolution of St. Leonard's college was, doubtless, necessary; but of that necessity there is reason to complain. It is surely not without just reproach, that a nation, of which the commerce is hourly extending, and the wealth increasing, denies any participation of its prosperity to its literary societies; and, while its merchants or its nobles are raising palaces, suffers its universities to moulder into dust.

A JOURNEY TO THE HEBRIDES

Of the two colleges yet standing, one is, by the institution of its founder, appropriated to divinity. It is said to be capable of containing fifty students; but more than one must occupy a chamber. The library, which is of late erection, is not very spacious, but elegant and luminous.

The doctor, by whom it was shown, hoped to irritate or subdue my English vanity, by telling me, that we had no such repository of books in England.

St. Andrews seems to be a place eminently adapted to study and education, being situated in a populous, yet a cheap country, and exposing the minds and manners of young men neither to the levity and dissoluteness of a capital city, nor to the gross luxury of a town of commerce, places naturally unpropitious to learning; in one, the desire of knowledge easily gives way to the love of pleasure, and in the other, is in danger of yielding to the love of money.

The students, however, are represented as, at this time, not exceeding a hundred. Perhaps it may be some obstruction to their increase that there is no episcopal chapel in the place. I saw no reason for imputing their paucity to the present professors; nor can the expense of an academical education be very reasonably objected. A student of the highest class may keep his annual session, or, as the English call it, his term, which lasts seven months, for about fifteen pounds, and one of lower rank for less than ten; in which, board, lodging, and instruction are all included.

The chief magistrate resident in the university,

A JOURNEY TO THE HEBRIDES

answering to our vicechancellor, and to the *rector magnificus* on the continent, had commonly the title of lord rector; but, being addressed only as Mr. rector, in an inaugural speech, by the present chancellor, he has fallen from his former dignity of style. Lordship was very liberally annexed by our ancestors to any station or character of dignity. They said, the lord general, and lord ambassadour; so we will say, my lord, to the judge upon the circuit, and yet retain in our liturgy, the lords of the council.

In walking among the ruins of religious buildings, we came to two vaults, over which had formerly stood the house of the sub-prior. One of the vaults was inhabited by an old woman, who claimed the right of abode there, as the widow of a man whose ancestors had possessed the same gloomy mansion for no less than four generations. The right, however it began, was considered as established by legal prescription, and the old woman lives undisturbed. She thinks, however, that she has a claim to something more than sufferance; for, as her husband's name was Bruce, she is allied to royalty, and told Mr. Boswell, that when there were persons of quality in the place, she was distinguished by some notice; that, indeed, she is now neglected, but she spins a thread, has the company of a cat, and is troublesome to nobody.

Having now seen whatever this ancient city offered to our curiosity, we left it with good wishes, having reason to be highly pleased with the attention that was paid us. But whoever surveys the

A JOURNEY TO THE HEBRIDES

world must see many things that give him pain. The kindness of the professors did not contribute to abate the uneasy remembrance of an university declining, a college alienated, and a church profaned and hastening to the ground.

St. Andrews, indeed, has formerly suffered more atrocious ravages and more extensive destruction; but recent evils affect with greater force. We were reconciled to the sight of archiepiscopal ruins. The distance of a calamity from the present time seems to preclude the mind from contact or sympathy. Events long past are barely known; they are not considered. We read with as little emotion the violence of Knox and his followers, as the irruptions of Alaric and the Goths. Had the university been destroyed two centuries ago, we should not have regretted it; but to see it pining in decay, and struggling for life, fills the mind with mournful images and ineffectual wishes.

As we knew sorrow and wishes to be vain, it was now our business to mind our way. The roads of Scotland afford little diversion to the traveller, who seldom sees himself either encountered or overtaken, and who has nothing to contemplate but grounds that have no visible boundaries, or are separated by walls of loose stone. From the bank of the Tweed to St. Andrews I had never seen a single tree, which I did not believe to have grown up far within the present century. Now and then about a gentleman's house stands a small plantation, which, in Scotch, is called a *policy*, but of these there are few, and those few all very young.

A JOURNEY TO THE HEBRIDES

The variety of sun and shade is here utterly unknown. There is no tree for either shelter or timber. The oak and the thorn is equally a stranger, and the whole country is extended in uniform nakedness, except that in the road between Kirkaldy and Cowpar, I passed for a few yards between two hedges. A tree might be a show in Scotland, as a horse in Venice. At St. Andrews Mr. Boswell found only one, and recommended it to my notice; I told him that it was rough and low, or looked as if I thought so. "This," said he, "is nothing to another a few miles off." I was still less delighted to hear that another tree was not to be seen nearer. "Nay," said a gentleman that stood by, "I know but of this and that tree in the county."

The lowlands of Scotland had once, undoubtedly, an equal portion of woods with other countries. Forests are every where gradually diminished, as architecture and cultivation prevail, by the increase of people and the introduction of arts. But, I believe, few regions have been denuded like this, where many centuries must have passed in waste, without the least thought of future supply. Davies observes in his account of Ireland, that no Irishman had ever planted an orchard. For that negligence some excuse might be drawn from an unsettled state of life, and the instability of property; but, in Scotland, possession has long been secure, and inheritance regular, yet it may be doubted whether, before the union, any man between Edinburgh and England had ever set a tree.

Of this improvidence no other account can be

A JOURNEY TO THE HEBRIDES

given than that it, probably, began in times of tumult, and continued, because it had begun. Established custom is not easily broken, till some great event shakes the whole system of things, and life seems to recommence upon new principles. That, before the union, the Scots had little trade and little money, is no valid apology; for plantation is the least expensive of all methods of improvement. To drop a seed into the ground, can cost nothing, and the trouble is not great of protecting the young plant, till it is out of danger; though it must be allowed to have some difficulty in places like these, where they have neither wood for palisades, nor thorns for hedges.

Our way was over the firth of Tay, where, though the water was not wide, we paid four shillings for ferrying the chaise. In Scotland the necessaries of life are easily procured, but superfluities and elegancies are of the same price, at least, as in England, and, therefore, may be considered as much dearer.

We stopped awhile at Dundee, where I remember nothing remarkable, and mounting our chaise again, came about the close of the day to Aberbrothick.

The monastery of Aberbrothick is of great renown in the history of Scotland. Its ruins afford ample testimony of its ancient magnificence. Its extent might, I suppose, easily be found by following the walls among the grass and weeds, and its height is known by some parts yet standing. The arch of one of the gates is entire, and of another only so far

A JOURNEY TO THE HEBRIDES

dilapidated as to diversify the appearance. A square apartment of great loftiness is yet standing; its use I could not conjecture, as its elevation was very disproportionate to its area. Two corner towers particularly attracted our attention. Mr. Boswell, whose inquisitiveness is seconded by great activity, scrambled in at a high window, but found the stairs within broken, and could not reach the top. Of the other tower we were told that the inhabitants sometimes climbed it, but we did not immediately discern the entrance, and, as the night was gathering upon us, thought proper to desist. Men skilled in architecture might do what we did not attempt; they might probably form an exact ground-plot of this venerable edifice. They may, from some parts yet standing, conjecture its general form, and, perhaps, by comparing it with other buildings of the same kind and the same age, attain an idea very near to truth. I should scarcely have regretted my journey, had it afforded nothing more than the sight of Aberbrothick.

Leaving these fragments of magnificence, we travelled on to Montrose, which we surveyed in the morning, and found it well built, airy, and clean. The townhouse is a handsome fabrick with a portico. We then went to view the English chapel, and found a small church, clean to a degree unknown in any other part of Scotland, with commodious galleries, and, what was yet less expected, with an organ.

At our inn we did not find a reception such as we thought proportionate to the commercial opu-

A JOURNEY TO THE HEBRIDES

lence of the place; but Mr. Boswell desired me to observe that the innkeeper was an Englishman, and I then defended him, as well as I could.

When I had proceeded thus far, I had opportunities of observing what I had never heard, that there were many beggars in Scotland. In Edinburgh the proportion is, I think, not less than in London, and in the smaller places it is far greater than in English towns of the same extent. It must, however, be allowed, that they are not importunate, nor clamorous. They solicit silently, or very modestly, and, therefore, though their behaviour may strike with more force the heart of a stranger, they are certainly in danger of missing the attention of their countrymen. Novelty has always some power: an unaccustomed mode of begging excites an unaccustomed degree of pity. But the force of novelty is, by its own nature, soon at an end; the efficacy of outcry and perseverance is permanent and certain.

The road from Montrose exhibited a continuation of the same appearances. The country is still naked, the hedges are of stone, and the fields so generally ploughed, that it is hard to imagine where grass is found for the horses that till them. The harvest, which was almost ripe, appeared very plentiful.

Early in the afternoon, Mr. Boswell observed, that we were at no great distance from the house of lord Monboddo. The magnetism of his conversation easily drew us out of our way, and the entertainment which we received would have been a sufficient recompense for a much greater deviation.

A JOURNEY TO THE HEBRIDES

The roads beyond Edinburgh, as they are less frequented, must be expected to grow gradually rougher; but they were hitherto by no means incommodious. We travelled on with the gentle pace of a Scotch driver, who, having no rivals in expedition, neither gives himself nor his horses unnecessary trouble. We did not affect the impatience we did not feel, but were satisfied with the company of each other, as well riding in the chaise, as sitting at an inn. The night and the day are equally solitary and equally safe; for where there are so few travellers, why should there be robbers?

We came somewhat late to Aberdeen, and found the inn so full, that we had some difficulty in obtaining admission, till Mr. Boswell made himself known. His name overpowered all objection, and we found a very good house and civil treatment.

I received the next day a very kind letter from sir Alexander Gordon, whom I had formerly known in London, and, after a cessation of all intercourse for near twenty years, met here professor of physick in the King's college. Such unexpected renewals of acquaintance may be numbered among the most pleasing incidents of life.

The knowledge of one professor soon procured me the notice of the rest, and I did not want any token of regard, being conducted wherever there was any thing which I desired to see, and entertained, at once, with the novelty of the place, and the kindness of communication.

To write of the cities of our own island with the solemnity of geographical description, as if we had

A JOURNEY TO THE HEBRIDES

been cast upon a newly discovered coast, has the appearance of a very frivolous ostentation; yet, as Scotland is little known to the greater part of those who may read these observations, it is not superfluous to relate, that under the name of Aberdeen are comprised two towns, standing about a mile distant from each other, but governed, I think, by the same magistrates.

Old Aberdeen is the ancient episcopal city, in which are still to be seen the remains of the cathedral. It has the appearance of a town in decay, having been situated, in times when commerce was yet unstudied, with very little attention to the commodiousness of the harbour.

New Aberdeen has all the bustle of prosperous trade, and all the show of increasing opulence. It is built by the waterside. The houses are large and lofty, and the streets spacious and clean. They build almost wholly with the granite used in the new pavement of the streets of London, which is well known not to want hardness, yet they shape it easily. It is beautiful, and must be very lasting.

What particular parts of commerce are chiefly exercised by the merchants of Aberdeen, I have not inquired. The manufacture which forces itself upon a stranger's eye is that of knit-stockings, on which the women of the lower class are visibly employed.

In each of these towns there is a college, or in stricter language an university; for in both there are professors of the same parts of learning, and the colleges hold their sessions and confer degrees separately, with total independence of one on the other.

A JOURNEY TO THE HEBRIDES

In Old Aberdeen stands the King's college, of which the first president was Hector Boece, or Boethius, who may be justly revered as one of the revivers of elegant learning. When he studied at Paris, he was acquainted with Erasmus, who afterwards gave him a publick testimony of his esteem, by inscribing to him a catalogue of his works. The style of Boethius, though, perhaps, not always rigorously pure, is formed with great diligence upon ancient models, and wholly uninfected with monastick barbarity. His history is written with elegance and vigour, but his fabulousness and credulity are justly blamed. His fabulousness, if he was the author of the fictions, is a fault for which no apology can be made; but his credulity may be excused in an age, when all men were credulous. Learning was then rising on the world; but ages so long accustomed to darkness, were too much dazzled with its light to see any thing distinctly. The first race of scholars in the fifteenth century, and some time after, were, for the most part, learning to speak, rather than to think, and were, therefore, more studious of elegance than of truth. The contemporaries of Boethius thought it sufficient to know what the ancients had delivered. The examination of tenets and of facts was reserved for another generation.

Boethius, as president of the university, enjoyed a revenue of forty Scottish marks, about two pounds four shillings and sixpence of sterling money. In the present age of trade and taxes, it is difficult even for the imagination so to raise the value of money,

A JOURNEY TO THE HEBRIDES

or so to diminish the demands of life, as to suppose four-and-forty shillings a year an honourable stipend ; yet it was, probably, equal, not only to the needs, but to the rank of Boethius. The wealth of England was, undoubtedly, to that of Scotland more than five to one, and it is known that Henry the eighth, among whose faults avarice was never reckoned, granted to Roger Ascham, as a reward of his learning, a pension of ten pounds a year.

The other, called the Marischal college, is in the new town. The hall is large and well lighted. One of its ornaments is the picture of Arthur Johnston, who was principal of the college, and who holds, among the Latin poets of Scotland, the next place to the elegant Buchanan.

In the library I was shown some curiosities ; a Hebrew manuscript of exquisite penmanship, and a Latin translation of Aristotle's *Politicks* by Leonardus Aretinus, written in the Roman character with nicety and beauty, which, as the art of printing has made them no longer necessary, are not now to be found. This was one of the latest performances of the transcribers, for Aretinus died but about twenty years before typography was invented. This version has been printed, and may be found in libraries, but is little read ; for the same books have been since translated both by Victorius and Lambinus, who lived in an age more cultivated, but, perhaps, owed in part to Aretinus that they were able to excel him. Much is due to those who first broke the way to knowledge, and left only to their successors the task of smoothing it.

A JOURNEY TO THE HEBRIDES

In both these colleges the methods of instruction are nearly the same; the lectures differing only by the accidental difference of diligence, or ability in the professors. The students wear scarlet gowns, and the professors black, which is, I believe, the academical dress in all the Scottish universities, except that of Edinburgh, where the scholars are not distinguished by any particular habit. In the King's college there is kept a publick table, but the scholars of the Marischal college are boarded in the town. The expense of living is here, according to the information that I could obtain, somewhat more than at St. Andrews.

The course of education is extended to four years, at the end of which those who take a degree, who are not many, become masters of arts; and whoever is a master may, if he pleases, immediately commence doctor. The title of doctor, however, was, for a considerable time, bestowed only on physicians. The advocates are examined, and approved by their own body; the ministers were not ambitious of titles, or were afraid of being censured for ambition; and the doctorate in every faculty was commonly given or sold into other countries. The ministers are now reconciled to distinction, and, as it must always happen that some will excel others, have thought graduation a proper testimony of uncommon abilities or acquisitions.

The indiscriminate collation of degrees has justly taken away that respect which they originally claimed, as stamps by which the literary value of men so distinguished was authoritatively denoted.

A JOURNEY TO THE HEBRIDES

That academical honours, or any others, should be conferred with exact proportion to merit, is more than human judgment or human integrity have given reason to expect. Perhaps degrees in universities cannot be better adjusted by any general rule than by the length of time passed in the publick profession of learning. An English or Irish doctorate cannot be obtained by a very young man, and it is reasonable to suppose, what is likewise by experience commonly found true, that he who is by age qualified to be a doctor, has in so much time gained learning sufficient not to disgrace the title, or wit sufficient not to desire it.

The Scotch universities hold but one term or session in the year. That of St. Andrews continues eight months, that of Aberdeen only five, from the first of November to the first of April.

In Aberdeen there is an English chapel, in which the congregation was numerous and splendid. The form of publick worship used by the church of England, is in Scotland legally practised in licensed chapels, served by clergymen of English or Irish ordination, and, by tacit connivance, quietly permitted in separate congregations, supplied with ministers by the successours of the bishops who were deprived at the revolution.

We came to Aberdeen on Saturday, August 21. On Monday we were invited into the town-hall, where I had the freedom of the city given me by the lord provost. The honour conferred had all the decorations that politeness could add, and, what, I am afraid, I should not have had to say of any

A JOURNEY TO THE HEBRIDES

city south of the Tweed, I found no petty officer bowing for a fee.

The parchment containing the record of admission is, with the seal appending, fastened to a riband, and worn for one day by the new citizen in his hat.

By a lady who saw us at the chapel, the earl of Errol was informed of our arrival, and we had the honour of an invitation to his seat, called Slanes castle, as I am told, improperly, from the castle of that name, which once stood at a place not far distant.

The road beyond Aberdeen grew more stony, and continued equally naked of all vegetable decoration. We travelled over a tract of ground near the sea, which, not long ago, suffered a very uncommon and unexpected calamity. The sand of the shore was raised by a tempest in such quantities, and carried to such a distance, that an estate was overwhelmed and lost. Such and so hopeless was the barrenness superinduced, that the owner, when he was required to pay the usual tax, desired rather to resign the ground.

We came, in the afternoon, to Slanes castle, built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed impracticable. From the windows the eye wanders over the sea that separates Scotland from Norway, and, when the winds beat with violence, must enjoy all the terrifick grandeur of the tempestuous ocean.

A JOURNEY TO THE HEBRIDES

I would not, for my amusement, wish for a storm; but, as storms, whether wished or not, will sometimes happen, I may say, without violation of humanity, that I should willingly look out upon them from Slanes castle.

When we were about to take our leave, our departure was prohibited by the countess, till we should have seen two places upon the coast, which she rightly considered as worthy of curiosity, Dun Buy, and the Buller of Buchan, to which Mr. Boyd very kindly conducted us.

Dun Buy, which in Erse is said to signify the yellow rock, is a double protuberance of stone, open to the mainsea on one side, and parted from the land by a very narrow channel on the other. It has its name and its colour from the dung of innumerable sea-fowls, which, in the spring, choose this place, as convenient for incubation, and have their eggs and their young taken in great abundance. One of the birds that frequent this rock has, as we were told, its body not larger than a duck's, and yet lay eggs as large as those of a goose. This bird is by the inhabitants named a *coot*. That which is called *coot* in England is here a *cooter*.

Upon these rocks there was nothing that could long detain attention, and we soon turned our eyes to the Buller, or Bouilloir of Buchan, which no man can see with indifference, who has either sense of danger, or delight in rarity. It is a rock perpendicularly tubulated, united on one side with a high shore, and on the other rising steep to a great height above the mainsea. The top is open, from which

A JOURNEY TO THE HEBRIDES

may be seen a dark gulf of water which flows into the cavity, through a breach made in the lower part of the enclosing rock. It has the appearance of a vast well bordered with a wall. The edge of the Buller is not wide, and to those that walk round, appears very narrow. He that ventures to look downward sees, that if his foot should slip, he must fall from his dreadful elevation upon stones on one side, or into the water on the other. We, however, went round, and were glad when the circuit was completed.

When we came down to the sea, we saw some boats, and rowers, and resolved to explore the Buller, at the Bottom. We entered the arch, which the water had made, and found ourselves in a place, which, though we could not think ourselves in danger, we could scarcely survey without some recoil of the mind. The basin, in which we floated, was nearly circular, perhaps, thirty yards in diameter. We were enclosed by a natural wall, rising steep on every side to a height which produced the idea of insurmountable confinement. The interception of all lateral light caused a dismal gloom. Round us was a perpendicular rock, above us the distant sky, and below an unknown profundity of water. If I had any malice against a walking spirit, instead of laying him in the Red sea, I would condemn him to reside in the Buller of Buchan.

But terrour without danger is only one of the sports of fancy, a voluntary agitation of the mind that is permitted no longer than it pleases. We were soon at leisure to examine the place with minute

A JOURNEY TO THE HEBRIDES

inspection, and found many cavities which, as the watermen told us, went backward to a depth which they had never explored. Their extent we had not time to try; they are said to serve different purposes. Ladies come hither sometimes, in the summer, with collations, and smugglers make them storehouses for clandestine merchandise. It is hardly to be doubted but the pirates of ancient times often used them as magazines of arms, or repositories of plunder.

To the little vessels used by the northern rowers, the Buller may have served as a shelter from storms, and perhaps as a retreat from enemies; the entrance might have been stopped, or guarded with little difficulty, and though the vessels, that were stationed within, would have been battered with stones showered on them from above, yet the crews would have lain safe in the caverns.

Next morning we continued our journey, pleased with our reception at Slanes castle, of which we had now leisure to recount the grandeur and the elegance; for our way afforded us few topics of conversation. The ground was neither uncultivated nor unfruitful; but it was still all arable. Of flocks or herds there was no appearance. I had now travelled two hundred miles in Scotland, and seen only one tree not younger than myself.

We dined this day at the house of Mr. Frazer of Streichton, who showed us in his grounds some stones yet standing of a druidical circle, and, what I began to think more worthy of notice, some forest-trees of full growth.

A JOURNEY TO THE HEBRIDES

At night we came to Bamff, where I remember nothing that particularly claimed my attention. The ancient towns of Scotland have generally an appearance unusual to Englishmen. The houses, whether great or small, are for the most part built of stones. Their ends are now and then next the streets, and the entrance into them is very often by a flight of steps, which reaches up to the second story; the floor which is level with the ground being entered only by stairs descending within the house.

The art of joining squares of glass with lead is little used in Scotland, and in some places is totally forgotten. The frames of their windows are all of wood. They are more frugal of their glass than the English, and will often, in houses not otherwise mean, compose a square of two pieces, not joining like cracked glass, but with one edge laid, perhaps, half an inch over the other. Their windows do not move upon hinges, but are pushed up and drawn down in grooves, yet they are seldom accommodated with weights and pulleys. He that would have his window open must hold it with his hand, unless, what may be sometimes found among good contrivers, there be a nail which he may stick into a hole, to keep it from falling.

What cannot be done without some uncommon trouble or particular expedient, will not often be done at all. The incommodiousness of the Scotch windows keeps them very closely shut. The necessity of ventilating human habitations has not yet been found by our northern neighbours; and, even in houses well built and elegantly furnished, a

A JOURNEY TO THE HEBRIDES

stranger may be sometimes forgiven, if he allows himself to wish for fresher air.

These diminutive observations seem to take away something from the dignity of writing, and, therefore, are never communicated but with hesitation, and a little fear of abasement and contempt. But it must be remembered, that life consists not of a series of illustrious actions, or elegant enjoyments; the greater part of our time passes in compliance with necessities, in the performance of daily duties, in the removal of small inconveniencies, in the procurement of petty pleasures; and we are well or ill at ease, as the main stream of life glides on smoothly, or is ruffled by small obstacles and frequent interruption. The true state of every nation, is the state of common life. The manners of a people are not to be found in the schools of learning, or the palaces of greatness, where the national character is obscured or obliterated by travel or instruction, by philosophy or vanity; nor is publick happiness to be estimated by the assemblies of the gay, or the banquets of the rich. The great mass of nations is neither rich nor gay: they whose aggregate constitutes the people, are found in the streets and the villages, in the shops and farms; and from them, collectively considered, must the measure of general prosperity be taken. As they approach to delicacy, a nation is refined; as their conveniencies are multiplied, a nation, at least a commercial nation, must be denominated wealthy.

Finding nothing to detain us at Bamff, we set out in the morning, and, having breakfasted at

A JOURNEY TO THE HEBRIDES

Cullen, about noon came to Elgin, where, in the inn that we supposed the best, a dinner was set before us, which we could not eat. This was the first time, and, except one, the last, that I found any reason to complain of a Scottish table; and such disappointments, I suppose, must be expected in every country, where there is no great frequency of travellers.

The ruins of the cathedral of Elgin afforded us another proof of the waste of reformation. There is enough yet remaining to show, that it was once magnificent. Its whole plot is easily traced. On the north side of the choir, the chapter-house, which is roofed with an arch of stone, remains entire; and, on the south side, another mass of building, which we could not enter, is preserved by the care of the family of Gordon; but the body of the church is a mass of fragments.

A paper was here put into our hands, which deduced from sufficient authorities the history of this venerable ruin. The church of Elgin had, in the intestine tumults of the barbarous ages, been laid waste by the irruption of a Highland chief, whom the bishop had offended; but, it was gradually restored to the state of which the traces may be now discerned, and was at last, not destroyed by the tumultuous violence of Knox, but more shamefully suffered to dilapidate by deliberate robbery and frigid indifference. There is still extant, in the books of the council, an order, of which I cannot remember the date, but which was doubtless issued after the reformation, directing that the lead, which covers the two cathedrals of Elgin and Aberdeen, shall

A JOURNEY TO THE HEBRIDES

be taken away, and converted into money for the support of the army. A Scotch army was in those times very cheaply kept; yet the lead of two churches must have borne so small a proportion to any military expense, that it is hard not to believe the reason alleged to be merely popular, and the money intended for some private purse. The order, however, was obeyed; the two churches were stripped, and the lead was shipped to be sold in Holland. I hope every reader will rejoice that this cargo of sacrilege was lost at sea.

Let us not, however, make too much haste to despise our neighbours. Our own cathedrals are mouldering by unregarded dilapidation. It seems to be part of the despicable philosophy of the time to despise monuments of sacred magnificence, and we are in danger of doing that deliberately, which the Scots did not do, but in the unsettled state of an imperfect constitution.

Those who had once uncovered the cathedrals never wished to cover them again; and, being thus made useless, they were first neglected, and, perhaps, as the stone was wanted, afterwards demolished.

Elgin seems a place of little trade, and thinly inhabited. The episcopal cities of Scotland, I believe, generally fell with their churches, though some of them have since recovered by a situation convenient for commerce. Thus Glasgow, though it has no longer an archbishop, has risen beyond its original state by the opulence of its traders; and Aberdeen, though its ancient stock had decayed, flourishes by a new shoot in another place.

A JOURNEY TO THE HEBRIDES

In the chief street of Elgin, the houses jut over the lowest story, like the old buildings of timber in London, but with greater prominence; so that there is sometimes a walk for a considerable length under a cloister, or portico, which is now indeed frequently broken, because the new houses have another form, but seems to have been uniformly continued in the old city.

We went forwards the same day to Fores, the town to which Macbeth was travelling, when he met the weird sisters in his way. This to an Englishman is classick ground. Our imaginations were heated, and our thoughts recalled to their old amusements.

We had now a prelude to the Highlands. We began to leave fertility and culture behind us, and saw for a great length of road nothing but heath; yet at Fochabars, a seat belonging to the duke of Gordon, there is an orchard, which in Scotland I had never seen before, with some timber-trees, and a plantation of oaks.

At Fores we found good accommodation, but nothing worthy of particular remark, and next morning entered upon the road, on which Macbeth heard the fatal prediction; but we travelled on not interrupted by promises of kingdoms, and came to Nairn, a royal burg, which, if once it flourished, is now in a state of miserable decay; but I know not whether its chief annual magistrate has not still the title of lord provost.

At Nairn we may fix the verge of the Highlands; for here I first saw peat fires, and first heard the

A JOURNEY TO THE HEBRIDES

Erse language. We had no motive to stay longer than to breakfast, and went forward to the house of Mr. Macaulay, the minister who published an account of St. Kilda, and by his direction visited Calder castle, from which Macbeth drew his second title. It has been formerly a place of strength. The drawbridge is still to be seen, but the moat is now dry. The tower is very ancient. Its walls are of great thickness, arched on the top with stone, and surrounded with battlements. The rest of the house is later, though far from modern.

We were favoured by a gentleman, who lives in the castle, with a letter to one of the officers at Fort George, which, being the most regular fortification in the island, well deserves the notice of a traveller, who has never travelled before. We went thither next day, found a very kind reception, were led round the works by a gentleman, who explained the use of every part, and entertained by sir Eyre Coote, the governour, with such elegance of conversation, as left us no attention to the delicacies of his table.

Of Fort George, I shall not attempt to give any account. I cannot delineate it scientifically, and a loose and popular description is of use only when the imagination is to be amused. There was every where an appearance of the utmost neatness and regularity. But my suffrage is of little value, because this and Fort Augustus are the only garrisons that I ever saw.

We did not regret the time spent at the fort, though in consequence of our delay, we came some-

A JOURNEY TO THE HEBRIDES

what late to Inverness, the town which may properly be called the capital of the Highlands. Hither the inhabitants of the inland parts come to be supplied with what they cannot make for themselves. Hither the young nymphs of the mountains and valleys are sent for education, and, as far as my observation has reached, are not sent in vain.

Inverness was the last place which had a regular communication by high roads with the southern counties. All the ways beyond it have, I believe, been made by the soldiers in this century. At Inverness, therefore, Cromwell, when he subdued Scotland, stationed a garrison, as at the boundary of the Highlands. The soldiers seem to have incorporated afterwards with the inhabitants, and to have peopled the place with an English race; for the language of this town has been long considered as peculiarly elegant.

Here is a castle, called the castle of Macbeth, the walls of which are yet standing. It was no very capacious edifice, but stands upon a rock, so high and steep, that I think it was once not accessible, but by the help of ladders, or a bridge. Over against it, on another hill, was a fort built by Cromwell, now totally demolished; for no faction of Scotland loved the name of Cromwell, or had any desire to continue his memory.

Yet what the Romans did to other nations, was in a great degree done by Cromwell to the Scots; he civilized them by conquest, and introduced, by useful violence, the arts of peace. I was told at Aberdeen,

A JOURNEY TO THE HEBRIDES

that the people learned from Cromwell's soldiers to make shoes, and to plant kail.

How they lived without kail, it is not easy to guess: they cultivate hardly any other plant for common tables, and when they had not kail, they, probably, had nothing. The numbers that go bare-foot are still sufficient to show that shoes may be spared: they are not yet considered as necessaries of life; for tall boys, not otherwise meanly dressed, run without them in the streets; and in the islands the sons of gentlemen pass several of their first years with naked feet.

I know not whether it be not peculiar to the Scots to have attained the liberal, without the manual arts, to have excelled in ornamental knowledge, and to have wanted, not only the elegancies, but the conveniencies of common life. Literature, soon after its revival, found its way to Scotland, and from the middle of the sixteenth century, almost to the middle of the seventeenth, the politer studies were very diligently pursued. The Latin poetry of *Deliciæ Poetarum Scotorum* would have done honour to any nation; at least till the publication of May's Supplement, the English had very little to oppose.

Yet men thus ingenious and inquisitive were content to live in total ignorance of the trades by which human wants are supplied, and to supply them by the grossest means. Till the union made them acquainted with English manners, the culture of their lands was unskilful, and their domestick life unformed; their tables were coarse as the feasts of

A JOURNEY TO THE HEBRIDES

Eskimeaux, and their houses filthy as the cottages of Hottentots.

Since they have known that their condition was capable of improvement, their progress in useful knowledge has been rapid and uniform. What remains to be done they will quickly do, and then wonder, like me, why that which was so necessary and so easy was so long delayed. But they must be for ever content to owe to the English that elegance and culture, which, if they had been vigilant and active, perhaps the English might have owed to them.

Here the appearance of life began to alter. I had seen a few women with plaids at Aberdeen; but at Inverness the Highland manners are common. There is, I think, a kirk, in which only the Erse language is used. There is likewise an English chapel, but meanly built, where on Sunday we saw a very decent congregation.

We were now to bid farewell to the luxury of travelling, and to enter a country upon which, perhaps, no wheel has ever rolled. We could, indeed, have used our postchaise one day longer, along the military road to Fort Augustus, but we could have hired no horses beyond Inverness, and we were not so sparing of ourselves, as to lead them, merely that we might have one day longer the indulgence of a carriage.

At Inverness, therefore, we procured three horses for ourselves and a servant, and one more for our baggage, which was no very heavy load. We found in the course of our journey the convenience of hav-

A JOURNEY TO THE HEBRIDES

ing disencumbered ourselves, by laying aside whatever we could spare; for it is not to be imagined without experience, how in climbing crags, and treading bogs, and winding through narrow and obstructed passages, a little bulk will hinder, and a little weight will burden; or how often a man that has pleased himself at home with his own resolution, will, in the hour of darkness and fatigue, be content to leave behind him every thing but himself.

We took two Highlanders to run beside us, partly to show us the way, and partly to take back from the seaside the horses, of which they were the owners. One of them was a man of great liveliness and activity, of whom his companion said, that he would tire any horse in Inverness. Both of them were civil and ready-handed. Civility seems part of the national character of Highlanders. Every chieftain is a monarch, and politeness, the natural product of royal government, is diffused from the laird through the whole clan. But they are not commonly dexterous: their narrowness of life confines them to a few operations, and they are accustomed to endure little wants, more than to remove them.

We mounted our steeds on the thirteenth of August, and directed our guides to conduct us to Fort Augustus. It is built at the head of Lough Ness, of which Inverness stands at the outlet. The way between them has been cut by the soldiers, and the greater part of it runs along a rock, levelled with great labour and exactness, near the waterside.

Most of this day's journey was very pleasant. The day, though bright, was not hot; and the ap-

A JOURNEY TO THE HEBRIDES

pearance of the country, if I had not seen the Peak, would have been wholly new. We went upon a surface so hard and level, that we had little care to hold the bridle, and were, therefore, at full leisure for contemplation. On the left were high and steep rocks, shaded with birch, the hardy native of the north, and covered with fern or heath. On the right the limpid waters of Lough Ness were beating their bank, and waving their surface by a gentle agitation. Beyond them were rocks sometimes covered with verdure, and sometimes towering in horrid nakedness. Now and then we espied a little corn-field, which served to impress more strongly the general barrenness.

Lough Ness is about twenty-four miles long, and from one mile to two miles broad. It is remarkable that Boethius, in his description of Scotland, gives it twelve miles of breadth. When historians or geographers exhibit false accounts of places far distant, they may be forgiven, because they can tell but what they are told; and that their accounts exceed the truth may be justly supposed, because most men exaggerate to others, if not to themselves; but Boethius lived at no great distance; if he never saw the lake, he must have been very incurious, and if he had seen it, his veracity yielded to very slight temptations.

Lough Ness, though not twelve miles broad, is a very remarkable diffusion of water, without islands. It fills a large hollow between two ridges of high rocks, being supplied, partly by the torrents, which fall into it on either side, and partly, as is supposed,

A JOURNEY TO THE HEBRIDES

by springs at the bottom. Its water is remarkably clear and pleasant, and is imagined by the natives to be medicinal. We were told, that it is in some places a hundred and forty fathoms deep, a profundity scarcely credible, and which probably those that relate it have never sounded. Its fish are salmon, trout, and pike.

It was said at Fort Augustus, that Lough Ness is open in the hardest winters, though a lake not far from it is covered with ice. In discussing these exceptions from the course of nature, the first question is, whether the fact be justly stated. That which is strange is delightful, and a pleasing error is not willingly detected. Accuracy of narration is not very common, and there are few so rigidly philosophical, as not to represent as perpetual, what is only frequent, or as constant, what is really casual. If it be true that Lough Ness never freezes, it is either sheltered by its high banks from the cold blasts, and exposed only to those winds, which have more power to agitate than congeal, or it is kept in perpetual motion by the rush of streams from the rocks that enclose it. Its profundity, though it should be such as is represented, can have little part in this exemption; for though deep wells are not frozen, because their water is secluded from the external air, yet, where a wide surface is exposed to the full influence of a freezing atmosphere, I know not why the depth should keep it open. Natural philosophy is now one of the favourite studies of the Scottish nation, and Lough Ness well deserves to be diligently examined.

A JOURNEY TO THE HEBRIDES

The road on which we travelled, and which was itself a source of entertainment, is made along the rock, in the direction of the lough, sometimes by breaking off protuberances, and sometimes by cutting the great mass of stone to a considerable depth. The fragments are piled in a loose wall on either side, with apertures left at very short spaces, to give a passage to the wintry currents. Part of it is bordered with low trees, from which our guides gathered nuts, and would have had the appearance of an English lane, except that an English lane is almost always dirty. It has been made with great labour, but has this advantage, that it cannot, without equal labour, be broken up.

Within our sight, there were goats feeding or playing. The mountains have red deer, but they came not within view; and if what is said of their vigilance and subtlety be true, they have some claim to that palm of wisdom, which the eastern philosopher, whom Alexander interrogated, gave to those beasts which live furthest from men.

↪ Near the way, by the waterside, we espied a cottage. This was the first Highland hut that I had seen; and, as our business was with life and manners, we were willing to visit it. To enter a habitation without leave, seems to be not considered here as rudeness or intrusion. The old laws of hospitality still give this license to a stranger.

A hut is constructed with loose stones, ranged for the most part with some tendency to circularity. It must be placed where the wind cannot act upon it with violence, because it has no cement;

A JOURNEY TO THE HEBRIDES

and where the water will run easily away, because it has no floor but the naked ground. The wall, which is commonly about six feet high, declines from the perpendicular a little inward. Such rafters as can be procured are then raised for a roof, and covered with heath, which makes a strong and warm thatch, kept from flying off by ropes of twisted heath, of which the ends, reaching from the centre of the thatch to the top of the wall, are held firm by the weight of a large stone. No light is admitted but at the entrance, and through a hole in the thatch, which gives vent to the smoke. This hole is not directly over the fire, lest the rain should extinguish it; and the smoke, therefore, naturally fills the place before it escapes. Such is the general structure of the houses, in which one of the nations of this opulent and powerful island has been hitherto content to live. Huts, however, are not more uniform than palaces; and this, which we were inspecting, was very far from one of the meanest, for it was divided into several apartments; and its inhabitants possessed such property as a pastoral poet might exalt into riches.

When we entered, we found an old woman boiling goat's flesh in a kettle. She spoke little English, but we had interpreters at hand, and she was willing enough to display her whole system of economy. She has five children, of which none are yet gone from her. The eldest, a boy of thirteen, and her husband, who is eighty years old, were at work in the wood. Her two next sons were gone to Inverness, to buy *meal*, by which oatmeal is always

A JOURNEY TO THE HEBRIDES

meant. Meal she considered as expensive food, and told us, that in spring, when the goats gave milk, the children could live without it. She is mistress of sixty goats, and I saw many kids in an enclosure at the end of her house. She had also some poultry. By the lake, we saw a potatoe-garden, and a small spot of ground, on which stood four shocks, containing each twelve sheaves of barley. She has all this from the labour of their own hands, and, for what is necessary to be bought, her kids and her chickens are sent to market.

With the true pastoral hospitality, she asked us to sit down and drink whisky. She is religious, and though the kirk is four miles off, probably eight English miles, she goes thither every Sunday. We gave her a shilling, and she begged snuff; for snuff is the luxury of a Highland cottage.

Soon afterwards we came to the General's hut, so called because it was the temporary abode of Wade, while he superintended the works upon the road. It is now a house of entertainment for passengers, and we found it not ill stocked with provisions.

Towards evening we crossed, by a bridge, the river which makes the celebrated fall of Fiers. The country, at the bridge, strikes the imagination with all the gloom and grandeur of Siberian solitude. The way makes a flexure, and the mountains, covered with trees, rise at once on the left hand and in the front. We desired our guides to show us the fall, and, dismounting, clambered over very rugged crags, till I began to wish that our curiosity might have been gratified with less trouble and danger.

A JOURNEY TO THE HEBRIDES

We came, at last, to a place where we could overlook the river, and saw a channel torn, as it seems, through black piles of stone, by which the stream is obstructed and broken, till it comes to a very steep descent, of such dreadful depth, that we were naturally inclined to turn aside our eyes.

But we visited the place at an unseasonable time, and found it divested of its dignity and terrour. Nature never gives every thing at once. A long continuance of dry weather, which made the rest of the way easy and delightful, deprived us of the pleasure expected from the fall of Fiers. The river, having now no water but what the springs supply, showed us only a swift current, clear and shallow, fretting over the asperities of the rocky bottom; and we were left to exercise our thoughts, by endeavouring to conceive the effect of a thousand streams, poured from the mountains into one channel, struggling for expansion in a narrow passage, exasperated by rocks rising in their way, and, at last, discharging all their violence of waters, by a sudden fall through the horrid chasm.

The way now grew less easy, descending by an uneven declivity, but without either dirt or danger. We did not arrive at Fort Augustus till it was late. Mr. Boswell, who, between his father's merit and his own, is sure of reception wherever he comes, sent a servant before to beg admission and entertainment for that night. Mr. Trapaud, the governour, treated us with that courtesy which is so closely connected with the military character. He came out to meet us beyond the gates, and apologized

A JOURNEY TO THE HEBRIDES

that, at so late an hour, the rules of a garrison suffered him to give us entrance only at the postern.

In the morning we viewed the fort, which is much less than that of St. George, and is said to be commanded by the neighbouring hills. It was not long ago taken by the Highlanders. But its situation seems well chosen for pleasure, if not for strength; it stands at the head of the lake, and, by a sloop of sixty tuns, is supplied from Inverness with great convenience.

We were now to cross the Highlands, towards the western coast, and to content ourselves with such accommodations, as a way so little frequented could afford. The journey was not formidable, for it was but of two days, very unequally divided, because the only house, where we could be entertained, was not further off than a third of the way. We soon came to a high hill, which we mounted by a military road, cut in traverses, so that, as we went upon a higher stage, we saw the baggage following us below in a contrary direction. To make this way, the rock has been hewn to a level, with labour that might have broken the perseverance of a Roman legion.

The country is totally denuded of its wood, but the stumps, both of oaks and firs, which are still found, show that it has been once a forest of large timber. I do not remember that we saw any animals, but we were told that, in the mountains, there are stags, roebucks, goats, and rabbits.

We did not perceive that this tract was possessed by human beings, except that once we saw a corn-

A JOURNEY TO THE HEBRIDES

field, in which a lady was walking with some gentlemen. Their house was certainly at no great distance, but so situated that we could not descry it.

Passing on through the dreariness of solitude, we found a party of soldiers from the fort, working on the road, under the superintendence of a sergeant. We told them how kindly we had been treated at the garrison, and, as we were enjoying the benefit of their labours, begged leave to show our gratitude by a small present.

Early in the afternoon we came to Anoch, a village in Glenmollison of three huts, one of which is distinguished by a chimney. Here we were to dine and lodge, and were conducted through the first room, that had the chimney, into another lighted by a small glass window. The landlord attended us with great civility, and told us what he could give us to eat and drink. I found some books on a shelf, among which were a volume or more of Prideaux's *Connexion*.

This I mentioned as something unexpected, and perceived that I did not please him. I praised the propriety of his language, and was answered that I need not wonder, for he had learned it by grammar.

By subsequent opportunities of observation, I found that my host's diction had nothing peculiar. Those Highlanders that can speak English, commonly speak it well, with few of the words, and little of the tone, by which a Scotchman is distinguished. Their language seems to have been learned in the army or the navy, or by some communication with those, who could give them good examples of

A JOURNEY TO THE HEBRIDES

accent and pronunciation. By their Lowland neighbours they would not willingly be taught; for they have long considered them as a mean and degenerate race. These prejudices are wearing fast away; but so much of them still remains, that, when I asked a very learned minister in the islands, which they considered as their most savage clans: “Those,” said he, “that live next the Lowlands.”

As we came hither early in the day, we had time sufficient to survey the place. The house was built, like other huts, of loose stones; but the part in which we dined and slept, was lined with turf, and wattled with twigs, which kept the earth from falling. Near it was a garden of turnips, and a field of potatoes. It stands in a glen, or valley, pleasantly watered by a winding river. But this country, however it may delight the gazer, or amuse the naturalist, is of no great advantage to its owners. Our landlord told us of a gentleman who possesses lands, eighteen Scotch miles in length, and three in breadth; a space containing, at least, a hundred square English miles. He has raised his rents, to the danger of depopulating his farms, and he fells his timber, and, by exerting every art of augmentation, has obtained a yearly revenue of four hundred pounds, which, for a hundred square miles, is three halfpence an acre.

Some time after dinner we were surprised by the entrance of a young woman, not inelegant either in mien or dress, who asked us whether we would have tea. We found that she was the daughter of our host, and desired her to make it. Her conversation, like her appearance, was gentle and pleasing. We

A JOURNEY TO THE HEBRIDES

knew that the girls of the highlands are all gentlewomen, and treated her with great respect, which she received as customary and due, and was neither elated by it, nor confused, but repaid my civilities without embarrassment, and told me how much I honoured her country, by coming to survey it.

She had been at Inverness to gain the common female qualifications, and had, like her father, the English pronunciation. I presented her with a book, which I happened to have about me, and should not be pleased to think that she forgets me.

In the evening the soldiers, whom we had passed on the road, came to spend at our inn the little money that we had given them. They had the true military impatience of coin in their pockets, and had marched at least six miles to find the first place where liquor could be bought. Having never been before in a place so wild and unfrequented, I was glad of their arrival, because I knew that we had made them friends; and to gain still more of their goodwill, we went to them, where they were carousing in the barn, and added something to our former gift. All that we gave was not much, but it detained them in the barn, either merry or quarrelling, the whole night, and in the morning they went back to their work, with great indignation at the bad qualities of whisky.

We had gained so much the favour of our host, that, when we left his house in the morning, he walked by us a great way, and entertained us with conversation, both on his own condition, and that of the country. His life seemed to be merely pas-

A JOURNEY TO THE HEBRIDES

toral, except that he differed from some of the ancient Nomades in having a settled dwelling. His wealth consists of one hundred sheep, as many goats, twelve milk-cows, and twenty-eight beeves ready for the drover.

From him we first heard of the general dissatisfaction, which is now driving the Highlanders into the other hemisphere; and when I asked him whether they would stay at home, if they were well treated, he answered with indignation, that no man willingly left his native country. Of the farm, which he himself occupied, the rent had, in twenty-five years, been advanced from five to twenty pounds, which he found himself so little able to pay, that he would be glad to try his fortune in some other place. Yet, he owned the reasonableness of raising the Highland rents in a certain degree, and declared himself willing to pay ten pounds for the ground which he had formerly had for five.

Our host having amused us for a time, resigned us to our guides. The journey of this day was long, not that the distance was great, but that the way was difficult. We were now in the bosom of the Highlands, with full leisure to contemplate the appearance and properties of mountainous regions, such as have been, in many countries, the last shelters of national distress, and are every where the scenes of adventures, stratagems, surprises, and escapes.

Mountainous countries are not passed but with difficulty, not merely from the labour of climbing; for to climb is not always necessary: but because,

A JOURNEY TO THE HEBRIDES

that which is not mountain is commonly bog, through which the way must be picked with caution. Where there are hills, there is much rain, and the torrents, pouring down into the intermediate spaces, seldom find so ready an outlet, as not to stagnate, till they have broken the texture of the ground.

Of the hills, which our journey offered to the view on either side, we did not take the height, nor did we see any that astonished us with their loftiness. Towards the summit of one, there was a white spot, which I should have called a naked rock, but the guides, who had better eyes, and were acquainted with the phænomena of the country, declared it to be snow. It had already lasted to the end of August, and was likely to maintain its contest with the sun, till it should be reinforced by winter.

The height of mountains, philosophically considered, is properly computed from the surface of the next sea; but, as it affects the eye or imagination of the passenger, as it makes either a spectacle or an obstruction, it must be reckoned from the place where the rise begins to make a considerable angle with the plain. In extensive continents the land may, by gradual elevation, attain great height, without any other appearance than that of a plain gently inclined, and if a hill, placed upon such raised ground, be described, as having its altitude equal to the whole space above the sea, the representation will be fallacious.

These mountains may be properly enough measured from the inland base; for it is not much above the sea. As we advanced at evening towards the

A JOURNEY TO THE HEBRIDES

western coast, I did not observe the declivity to be greater than is necessary for the discharge of the inland waters.

We passed many rivers and rivulets, which commonly ran, with a clear shallow stream, over a hard pebbly bottom. These channels, which seem so much wider than the water that they convey would naturally require, are formed by the violence of wintry floods, produced by the accumulation of innumerable streams that fall in rainy weather from the hills, and, bursting away with resistless impetuosity, make themselves a passage proportionate to their mass.

Such capricious and temporary waters cannot be expected to produce many fish. The rapidity of the wintry deluge sweeps them away, and the scantiness of the summer stream would hardly sustain them above the ground. This is the reason why, in fording the northern rivers, no fishes are seen, as in England, wandering in the water.

Of the hills many may be called, with Homer's *Ida*, abundant in springs; but few can deserve the epithet which he bestows upon *Pelion* by waving their leaves. They exhibit very little variety; being almost wholly covered with dark heath, and even that seems to be checked in its growth. What is not heath is nakedness, a little diversified by now and then a stream rushing down the steep. An eye, accustomed to flowery pastures and waving harvests, is astonished and repelled by this wide extent of hopeless sterility. The appearance is that of matter incapable of form or usefulness, dismissed by nature

A JOURNEY TO THE HEBRIDES

from her care, and disinherited of her favours, left in its original elemental state, or quickened only with one sullen power of useless vegetation.

It will very readily occur, that this uniformity of barrenness can afford very little amusement to the traveller; that it is easy to sit at home and conceive rocks, and heath, and waterfalls; and that these journeys are useless labours, which neither impregnate the imagination, nor enlarge the understanding. It is true, that of far the greater part of things, we must content ourselves with such knowledge as description may exhibit, or analogy supply; but it is true, likewise, that these ideas are always incomplete, and that, at least, till we have compared them with realities, we do not know them to be just. As we see more, we become possessed of more certainties, and, consequently, gain more principles of reasoning, and found a wider basis of analogy.

Regions, mountainous and wild, thinly inhabited, and little cultivated, make a great part of the earth, and he that has never seen them, must live unacquainted with much of the face of nature, and with one of the great scenes of human existence.

As the day advanced towards noon, we entered a narrow valley, not very flowery, but sufficiently verdant. Our guides told us, that the horses could not travel all day without rest or meat, and entreated us to stop here, because no grass would be found in any other place. The request was reasonable, and the argument cogent. We, therefore, willingly dismounted, and diverted ourselves as the place gave us opportunity.

A JOURNEY TO THE HEBRIDES

I sat down on a bank, such as a writer of romance might have delighted to feign. I had, indeed, no trees to whisper over my head, but a clear rivulet streamed at my feet. The day was calm, the air was soft, and all was rudeness, silence, and solitude. Before me, and on either side, were high hills, which, by hindering the eye from ranging, forced the mind to find entertainment for itself. Whether I spent the hour well I know not; for here I first conceived the thought of this narration.

We were in this place at ease and by choice, and had no evils to suffer or to fear; yet the imaginations excited by the view of an unknown and untravelled wilderness are not such as arise in the artificial solitude of parks and gardens, a flattering notion of self-sufficiency, a placid indulgence of voluntary delusions, a secure expansion of the fancy, or a cool concentration of the mental powers. The phantoms which haunt a desert are want, and misery, and danger; the evils of dereliction rush upon the thoughts; man is made unwillingly acquainted with his own weakness, and meditation shows him only how little he can sustain, and how little he can perform. There were no traces of inhabitants, except, perhaps, a rude pile of clods, called a summer hut, in which a herdsman had rest in the favourable seasons. Whoever had been in the place where I then sat, unprovided with provisions, and ignorant of the country, might, at least before the roads were made, have wandered among the rocks, till he had perished with hardship, before he could have found either food or shelter. Yet what

A JOURNEY TO THE HEBRIDES

are these hillocks to the ridges of Taurus, or these spots of wildness to the deserts of America ?

It was not long before we were invited to mount, and continued our journey along the side of a lough, kept full by many streams, which, with more or less rapidity and noise, crossed the road from the hills on the other hand. These currents, in their diminished state, after several dry months, afford, to one who has always lived in level countries, an unusual and delightful spectacle; but in the rainy season, such as every winter may be expected to bring, must precipitate an impetuous and tremendous flood. I suppose the way by which we went, is, at that time, impassable.

The lough at last ended in a river, broad and shallow, like the rest, but, that it may be passed when it is deeper, there is a bridge over it. Beyond it is a valley, called Glensheals, inhabited by the clan of Macrae. Here we found a village, called Auknasheals, consisting of many huts, perhaps twenty, built all of *dry-stone*, that is, stones piled up without mortar.

We had, by the direction of the officers at Fort Augustus, taken bread for ourselves, and tobacco for those Highlanders who might show us any kindness. We were now at a place where we could obtain milk, but, must have wanted bread, if we had not brought it. The people of this valley did not appear to know any English, and our guides now became doubly necessary as interpreters. A woman, whose hut was distinguished by greater spaciousness, and better architecture, brought out

A JOURNEY TO THE HEBRIDES

some pails of milk. The villagers gathered about us in considerable numbers, I believe without any evil intention, but with a very savage wildness of aspect and manner. When our meal was over, Mr. Boswell sliced the bread, and divided it amongst them, as he supposed them never to have tasted a wheaten loaf before. He then gave them little pieces of twisted tobacco, and, among the children, we distributed a small handful of halfpence, which they received with great eagerness. Yet, I have been since told, that the people of that valley are not indigent; and when we mentioned them afterwards, as needy and pitiable, a Highland lady let us know, that we might spare our commiseration; for the dame, whose milk we drank, had probably more than a dozen milk-cows. She seemed unwilling to take any price, but, being pressed to make a demand, at last named a shilling. Honesty is not greater where elegance is less. One of the by-standers, as we were told afterwards, advised her to ask more, but she said a shilling was enough. We gave her half-a-crown, and I hope got some credit by our behaviour; for the company said, if our interpreters did not flatter us, that they had not seen such a day, since the old laird of Macleod passed through their country.

The Macraes, as we heard afterwards in the Hebrides, were originally an indigent and subordinate clan, and having no farms nor stock, were in great numbers servants to the Maclellans, who, in the war of Charles the first, took arms at the call of the heroick Montrose, and were, in one of his battles, almost all destroyed. The women, that were

A JOURNEY TO THE HEBRIDES

left at home, being thus deprived of their husbands, like the Scythian ladies of old, married their servants, and the Macraes became a considerable race.

As we continued our journey, we were at leisure to extend our speculations, and to investigate the reason of those peculiarities, by which such rugged regions, as these before us, are generally distinguished.

Mountainous countries commonly contain the original, at least the oldest race of inhabitants, for they are not easily conquered, because they must be entered by narrow ways, exposed to every power of mischief from those that occupy the heights; and every new ridge is a new fortress, where the defendants have again the same advantages. If the assailants either force the strait, or storm the summit, they gain only so much ground; their enemies are fled to take possession of the next rock, and the pursuers stand at gaze, knowing neither where the ways of escape wind among the steeps, nor where the bog has firmness to sustain them: besides that, mountaineers have an agility in climbing and descending, distinct from strength or courage, and attainable only by use.

If the war be not soon concluded, the invaders are dislodged by hunger; for in those anxious and toilsome marches, provisions cannot easily be carried, and are never to be found. The wealth of mountains is cattle, which, while the men stand in the passes, the women drive away. Such lands, at last, cannot repay the expense of conquest, and, therefore, perhaps, have not been so often invaded

A JOURNEY TO THE HEBRIDES

by the mere ambition of dominion, as by resentment of robberies and insults, or the desire of enjoying in security the more fruitful provinces.

As mountaineers are long before they are conquered, they are likewise long before they are civilized. Men are softened by intercourse mutually profitable, and instructed by comparing their own notions with those of others. Thus Cæsar found the maritime parts of Britain made less barbarous by their commerce with the Gauls. Into a barren and rough tract no stranger is brought, either by the hope of gain or of pleasure. The inhabitants, having neither commodities for sale, nor money for purchase, seldom visit more polished places, or, if they do visit them, seldom return.

It sometimes happens that by conquest, intermixture, or gradual refinement, the cultivated parts of a country change their language. The mountaineers then become a distinct nation, cut off, by dissimilitude of speech, from conversation with their neighbours. Thus, in Biscay, the original Cantabrian, and in Dalecarlia, the old Swedish still subsists. Thus Wales and the Highlands speak the tongue of the first inhabitants of Britain, while the other parts have received first the Saxon, and in some degree afterwards the French, and then formed a third language between them.

That the primitive manners are continued where the primitive language is spoken, no nation will desire me to suppose, for the manners of mountaineers are commonly savage, but they are rather pro-

A JOURNEY TO THE HEBRIDES

duced by their situation than derived from their ancestors.

Such seems to be the disposition of man, that whatever makes a distinction produces rivalry. England, before other causes of enmity were found, was disturbed, for some centuries, by the contests of the northern and southern counties; so that at Oxford, the peace of study could for a long time be preserved, only by choosing annually one of the proctors from each side of the Trent. A tract, intersected by many ridges of mountains, naturally divides its inhabitants into petty nations, which are made, by a thousand causes, enemies to each other. Each will exalt its own chiefs, each will boast the valour of its men, or the beauty of its women, and every claim of superiority irritates competition; injuries will sometimes be done, and be more injuriously defended; retaliation will sometimes be attempted, and the debt exacted with too much interest.

In the Highlands it was a law, that if a robber was sheltered from justice, any man of the same clan might be taken in his place. This was a kind of irregular justice, which, though necessary in savage times, could hardly fail to end in a feud; and a feud once kindled among an idle people, with no variety of pursuits to divert their thoughts, burnt on for ages, either sullenly glowing in secret mischief, or openly blazing into publick violence. Of the effects of this violent judicature, there are not wanting memorials. The cave is now to be seen to which one of the Campbells, who had injured the

A JOURNEY TO THE HEBRIDES

Macdonalds, retired with a body of his own clan. The Macdonalds required the offender, and being refused, made a fire at the mouth of the cave by which he and his adherents were suffocated together.

Mountaineers are warlike, because by their feuds and competitions they consider themselves as surrounded with enemies, and are always prepared to repel incursions, or to make them. Like the Greeks in their unpolished state, described by Thucydides, the Highlanders, till lately, went always armed, and carried their weapons to visits, and to church.

Mountaineers are thievish, because they are poor, and having neither manufactures nor commerce, can grow richer only by robbery. They regularly plunder their neighbours, for their neighbours are commonly their enemies; and having lost that reverence for property, by which the order of civil life is preserved, soon consider all as enemies whom they do not reckon as friends, and think themselves licensed to invade whatever they are not obliged to protect.

By a strict administration of the laws, since the laws have been introduced into the Highlands, this disposition to thievery is very much repressed. Thirty years ago, no herd had ever been conducted through the mountains without paying tribute in the night to some of the clans; but cattle are now driven, and passengers travel, without danger, fear, or molestation.

Among a warlike people, the quality of highest esteem is personal courage, and with the ostentatious display of courage are closely connected prompt-

A JOURNEY TO THE HEBRIDES

itude of offence, and quickness of resentment. The Highlanders, before they were disarmed, were so addicted to quarrels, that the boys used to follow any publick procession or ceremony, however festive, or however solemn, in expectation of the battle, which was sure to happen before the company dispersed.

Mountainous regions are sometimes so remote from the seat of government, and so difficult of access, that they are very little under the influence of the sovereign, or within the reach of national justice. Law is nothing without power; and the sentence of a distant court could not be easily executed, nor perhaps very safely promulgated, among men, ignorantly proud and habitually violent, unconnected with the general system, and accustomed to reverence only their own lords. It has, therefore, been necessary to erect many particular jurisdictions, and commit the punishment of crimes, and the decision of right, to the proprietors of the country who could enforce their own decrees. It immediately appears that such judges will be often ignorant, and often partial; but in the immaturity of political establishments no better expedient could be found. As government advances towards perfection, provincial judicature is perhaps in every empire gradually abolished.

Those who had thus the dispensation of law, were, by consequence, themselves lawless. Their vassals had no shelter from outrages and oppressions; but were condemned to endure, without re-

A JOURNEY TO THE HEBRIDES

sistance, the caprices of wantonness and the rage of cruelty.

In the Highlands, some great lords had an hereditary jurisdiction over counties; and some chieftains over their own lands; till the final conquest of the Highlands afforded an opportunity of crushing all the local courts, and of extending the general benefits of equal law to the low and the high, in the deepest recesses and obscurest corners.

While the chiefs had this resemblance of royalty, they had little inclination to appeal, on any question, to superiour judicatures. A claim of lands between two powerful lairds was decided like a contest for dominion between sovereign powers. They drew their forces into the field, and right attended on the strongest. This was, in ruder times, the common practice, which the kings of Scotland could seldom control.

Even so lately as in the last years of king William, a battle was fought at Mull Roy, on a plain a few miles to the south of Inverness, between the clans of Mackintosh and Macdonald of Keppoch. Colonel Macdonald, the head of a small clan, refused to pay the dues demanded from him by Mackintosh, as his superiour lord. They disdained the interposition of judges and laws, and calling each his followers to maintain the dignity of the clan, fought a formal battle, in which several considerable men fell on the side of Mackintosh, without a complete victory to either. This is said to have been the last open war made between the clans by their own authority.

A JOURNEY TO THE HEBRIDES

The Highland lords made treaties, and formed alliances, of which some traces may still be found, and some consequences still remain as lasting evidences of petty regality. The terms of one of these confederacies were, that each should support the other in the right, or in the wrong, except against the king.

The inhabitants of mountains form distinct races, and are careful to preserve their genealogies. Men in a small district, necessarily mingle blood by intermarriages, and combine at last into one family, with a common interest in the honour and disgrace of every individual. Then begins that union of affections, and cooperation of endeavours, that constitute a clan. They who consider themselves as ennobled by their family, will think highly of their progenitors, and they who, through successive generations, live always together in the same place, will preserve local stories and hereditary prejudices. Thus, every Highlander can talk of his ancestors, and recount the outrages which they suffered from the wicked inhabitants of the next valley.

Such are the effects of habitation among mountains, and such were the qualities of the Highlanders, while their rocks secluded them from the rest of mankind, and kept them an unaltered and discriminated race. They are now losing their distinction, and hastening to mingle with the general community.

We left Auknasheals and the Macraes in the afternoon, and in the evening came to Ratiken, a high hill on which a road is cut, but so steep and

A JOURNEY TO THE HEBRIDES

narrow that it is very difficult. There is now a design of making another way round the bottom. Upon one of the precipices, my horse, weary with the steepness of the rise, staggered a little, and I called in haste to the Highlander to hold him. This was the only moment of my journey, in which I thought myself endangered.

Having surmounted the hill at last, we were told, that at Glenelg, on the seaside, we should come to a house of lime and slate and glass. This image of magnificence raised our expectation. At last we came to our inn, weary and peevish, and began to enquire for meat and beds.

Of the provisions the negative catalogue was very copious. Here was no meat, no milk, no bread, no eggs, no wine. We did not express much satisfaction. Here, however, we were to stay. Whisky we might have, and I believe at last they caught a fowl and killed it. We had some bread, and with that we prepared ourselves to be contented, when we had a very eminent proof of Highland hospitality. Along some miles of the way, in the evening, a gentleman's servant had kept us company on foot with very little notice on our part. He left us near Glenelg, and we thought on him no more till he came to us again, in about two hours, with a present from his master of rum and sugar. The man had mentioned his company, and the gentleman, whose name, I think, is Gordon, well knowing the penury of the place, had this attention to two men, whose names perhaps he had not heard, by whom his kindness was not likely to be ever repaid, and who

A JOURNEY TO THE HEBRIDES

could be recommended to him only by their necessities.

We were now to examine our lodging. Out of one of the beds, on which we were to repose, started up, at our entrance, a man black as a Cyclops from the forge. Other circumstances of no elegant recital, concurred to disgust us. We had been frightened by a lady at Edinburgh, with discouraging representations of Highland lodgings. Sleep, however, was necessary. Our Highlanders had at last found some hay, with which the inn could not supply them. I directed them to bring a bundle into the room, and slept upon it in my riding coat. Mr. Boswell, being more delicate, laid himself sheets with hay over and under him, and lay in linen like a gentleman.

In the morning, September the twentieth, we found ourselves on the edge of the sea. Having procured a boat, we dismissed our Highlanders, whom I would recommend to the service of any future travellers, and were ferried over to the isle of Sky. We landed at Armidel, where we were met on the sands by sir Alexander Macdonald, who was at that time there with his lady, preparing to leave the island, and reside at Edinburgh.

Armidel is a neat house, built where the Macdonalds had once a seat, which was burnt in the commotions that followed the revolution. The walled orchard, which belonged to the former house, still remains. It is well shaded by tall ash-trees, of a species, as Mr. Janes the fossilist informed me, uncommonly valuable. This plantation is very prop-

A JOURNEY TO THE HEBRIDES

erly mentioned by Dr. Campbell, in his new account of the state of Britain, and deserves attention; because it proves that the present nakedness of the Hebrides is not wholly the fault of nature.

As we sat at sir Alexander's table, we were entertained, according to the ancient usage of the north, with the melody of the bagpipe. Every thing in those countries has its history. As the bagpiper was playing, an elderly gentleman informed us, that in some remote time, the Macdonalds of Glengary having been injured, or offended by the inhabitants of Culloden, and resolving to have justice or vengeance, came to Culloden on a Sunday, where, finding their enemies at worship, they shut them up in the church, which they set on fire: "and this," said he, "is the tune which the piper played while they were burning."

Narrations like this, however uncertain, deserve the notice of a traveller, because they are the only records of a nation that has no historians, and afford the most genuine representation of the life and character of the ancient Highlanders.

Under the denomination of Highlander are comprehended, in Scotland all that now speak the Erse language, or retain the primitive manners, whether they live among the mountains, or in the islands; and in that sense I use the name, when there is not some apparent reason for making a distinction.

In Sky I first observed the use of brogues, a kind of artless shoes, stitched with thongs so loosely, that though they defend the foot from stones, they do not exclude water. Brogues were formerly made

A JOURNEY TO THE HEBRIDES

of raw hides, with the hair inwards, and such are, perhaps, still used in rude and remote parts; but they are said not to last above two days. Where life is somewhat improved, they are now made of leather, tanned with oak-bark, as in other places, or with the bark of birch, or roots of tormentil, a substance recommended in defect of bark, about forty years ago, to the Irish tanners, by one to whom the parliament of that kingdom voted a reward. The leather of Sky is not completely penetrated by vegetable matter, and therefore cannot be very durable.

My inquiries about brogues gave me an early specimen of Highland information. One day I was told, that to make brogues was a domestick art, which every man practised for himself, and that a pair of brogues was the work of an hour. I supposed that the husband made brogues as the wife made an apron, till next day it was told me, that the brogue-maker was a trade, and that a pair would cost half-a-crown. It will easily occur that these representations may both be true, and that, in some places, men may buy them, and in others make them for themselves; but I had both the accounts in the same house within two days.

Many of my subsequent inquiries upon more interesting topicks ended in the like uncertainty. He that travels in the Highlands may easily saturate his soul with intelligence, if he will acquiesce in the first account. The Highlander gives to every question an answer so prompt and peremptory, that skepticism itself is dared into silence, and the mind

A JOURNEY TO THE HEBRIDES

sinks before the bold reporter in unresisting credulity; but if a second question be ventured, it breaks the enchantment; for it is immediately discovered, that what was told so confidently was told at hazard, and that such fearlessness of assertion was either the sport of negligence, or the refuge of ignorance.

If individuals are thus at variance with themselves, it can be no wonder that the accounts of different men are contradictory. The traditions of an ignorant and savage people have been for ages negligently heard, and unskilfully related. Distant events must have been mingled together, and the actions of one man given to another. These, however, are deficiencies in story, for which no man is now to be censured. It were enough, if what there is yet opportunity of examining were accurately inspected and justly represented; but such is the laxity of Highland conversation, that the inquirer is kept in continual suspense, and, by a kind of intellectual retrogradation, knows less as he hears more.

In the islands the plaid is rarely worn. The law by which the Highlanders have been obliged to change the form of their dress, has, in all the places that we have visited, been universally obeyed. I have seen only one gentleman completely clothed in the ancient habit, and by him it was worn only occasionally and wantonly. The common people do not think themselves under any legal necessity of having coats; for they say, that the law against plaids was made by lord Hardwicke, and was in

A JOURNEY TO THE HEBRIDES

force only for his life: but the same poverty that made it then difficult for them to change their clothing, hinders them now from changing it again.

The fillibeg, or lower garment, is still very common, and the bonnet almost universal; but their attire is such as produces, in a sufficient degree, the effect intended by the law, of abolishing the dissimilitude of appearance between the Highlanders and the other inhabitants of Britain; and, if dress be supposed to have much influence, facilitates their coalition with their fellow-subjects.

What we have long used we naturally like; and therefore the highlanders were unwilling to lay aside their plaid, which yet to an unprejudiced spectator must appear an incommodious and cumbersome dress; for hanging loose upon the body, it must flutter in a quick motion, or require one of the hands to keep it close. The Romans always laid aside the gown when they had any thing to do. It was a dress so unsuitable to war, that the same word which signified a gown signified peace. The chief use of a plaid seems to be this, that they could commodiously wrap themselves in it when they were obliged to sleep without a better cover.

In our passage from Scotland to Sky, we were wet, for the first time, with a shower. This was the beginning of the Highland winter, after which we were told that a succession of three dry days was not to be expected for many months. The winter of the Hebrides consists of little more than rain and wind. As they are surrounded by an ocean never frozen, the blasts that come to them over the water are too

A JOURNEY TO THE HEBRIDES

much softened to have the power of congelation. The salt loughs, or inlets, of the sea, which shoot very far into the island, never have any ice upon them, and the pools of fresh water will never bear the walker. The snow that sometimes falls, is soon dissolved by the air, or the rain.

This is not the description of a cruel climate, yet the dark months are here a time of great distress; because the summer can do little more than feed itself, and winter comes with its cold and its scarcity upon families very slenderly provided.

The third or fourth day after our arrival at Armidel, brought us an invitation to the isle of Raasay, which lies east of Sky. It is incredible how soon the account of any event is propagated in these narrow countries by the love of talk, which much leisure produces, and the relief given to the mind in the penury of insular conversation by a new topick. The arrival of strangers at a place so rarely visited, excites rumour, and quickens curiosity. I know not whether we touched at any corner, where fame had not already prepared us a reception.

To gain a commodious passage to Raasay, it was necessary to pass over a large part of Sky. We were furnished, therefore, with horses and a guide. In the islands there are no roads, nor any marks by which a stranger may find his way. The horseman has always at his side a native of the place, who, by pursuing game, or tending cattle, or being often employed in messages or conduct, has learned where the ridge of the hill has breadth sufficient to allow a horse and his rider a passage, and where the moss

A JOURNEY TO THE HEBRIDES

or bog is hard enough to bear them. The bogs are avoided as toilsome at least, if not unsafe, and, therefore, the journey is made generally from precipice to precipice; from which if the eye ventures to look down, it sees below a gloomy cavity, whence the rush of water is sometimes heard.

But there seems to be in all this more alarm than danger. The Highlander walks carefully before, and the horse, accustomed to the ground, follows him with little deviation. Sometimes the hill is too steep for the horseman to keep his seat, and sometimes the moss is too tremulous to bear the double weight of horse and man. The rider then dismounts, and all shift as they can.

Journeys made in this manner are rather tedious, than long. A very few miles require several hours. From Armidel we came at night to Coriatachan, a house very pleasantly situated between two brooks, with one of the highest hills of the island behind it. It is the residence of Mr. Mackinnon, by whom we were treated with very liberal hospitality, among a more numerous and elegant company than it could have been supposed easy to collect.

The hill behind the house we did not climb. The weather was rough, and the height and steepness discouraged us. We were told that there is a cairne upon it. A cairne is a heap of stones thrown upon the grave of one eminent for dignity of birth, or splendour of achievements. It is said, that by digging, an urn is always found under these cairnes; they must, therefore, have been thus piled by a people whose custom was to burn the dead. To pile

A JOURNEY TO THE HEBRIDES

stones is, I believe, a northern custom, and to burn the body was the Roman practice; nor do I know when it was that these two acts of sepulture were united.

The weather was next day too violent for the continuation of our journey; but we had no reason to complain of the interruption. We saw in every place, what we chiefly desired to know, the manners of the people. We had company, and if we had chosen retirement, we might have had books.

I never was in any house of the islands, where I did not find books in more languages than one, if I staid long enough to want them, except one from which the family was removed. Literature is not neglected by the higher rank of the Hebridians.

It need not, I suppose, be mentioned, that in countries so little frequented as the islands, there are no houses where travellers are entertained for money. He that wanders about these wilds, either procures recommendations to those whose habitations lie near his way, or, when night and weariness come upon him, takes the chance of general hospitality. If he finds only a cottage, he can expect little more than shelter; for the cottagers have little more for themselves: but if his good fortune brings him to the residence of a gentleman, he will be glad of a storm to prolong his stay. There is, however, one inn by the seaside at Sconsor, in Sky, where the post-office is kept.

At the tables, where a stranger is received, neither plenty nor delicacy is wanting. A tract of land so thinly inhabited must have much wild fowl; and I

A JOURNEY TO THE HEBRIDES

scarcely remember to have seen a dinner without them. The moor-game is every where to be had. That the sea abounds with fish, needs not to be told, for it supplies a great part of Europe. The isle of Sky has stags and roebucks, but no hares. They send very numerous droves of oxen yearly to England, and, therefore, cannot be supposed to want beef at home. Sheep and goats are in great numbers, and they have the common domestick fowls.

But as here is nothing to be bought, every family must kill its own meat, and roast part of it somewhat sooner than Apicius would prescribe. Every kind of flesh is undoubtedly excelled by the variety and emulation of English markets; but that which is not best may be yet very far from bad, and he that shall complain of his fare in the Hebrides, has improved his delicacy more than his manhood.

Their fowls are not like those plumped for sale by the poulterers of London, but they are as good as other places commonly afford, except that the geese, by feeding in the sea, have universally a fishy rankness.

These geese seem to be of a middle race, between the wild and domestick kinds. They are so tame as to own a home, and so wild as sometimes to fly quite away.

Their native bread is made of oats, or barley. Of oatmeal they spread very thin cakes, coarse and hard, to which unaccustomed palates are not easily reconciled. The barley cakes are thicker and softer; I began to eat them without unwillingness; the blackness of their colour raises some dislike, but the taste

A JOURNEY TO THE HEBRIDES

is not disagreeable. In most houses there is wheat flour, with which we were sure to be treated, if we staid long enough to have it kneaded and baked. As neither yeast nor leaven are used among them, their bread of every kind is unfermented. They make only cakes, and never mould a loaf.

A man of the Hebrides, for of the women's diet I can give no account, as soon as he appears in the morning, swallows a glass of whisky; yet they are not a drunken race, at least I never was present at much intemperance; but no man is so abstemious as to refuse the morning dram, which they call a *skalk*.

The word *whisky* signifies water, and is applied by way of eminence to *strong water*, or distilled liquor. The spirit drunk in the north is drawn from barley. I never tasted it, except once for experiment at the inn in Inverary, when I thought it preferable to any English malt brandy. It was strong but not pungent, and was free from the empyreumatick taste or smell. What was the process I had no opportunity of inquiring, nor do I wish to improve the art of making poison pleasant.

Not long after the dram, may be expected the breakfast, a meal in which the Scots, whether of the lowlands or mountains, must be confessed to excel us. The tea and coffee are accompanied not only with butter, but with honey, conserves, and marmalades. If an epicure could remove by a wish, in quest of sensual gratifications, wherever he had supped he would breakfast in Scotland.

— In the islands, however, they do what I found it not very easy to endure. They pollute the tea-table

A JOURNEY TO THE HEBRIDES

by plates piled with large slices of Cheshire cheese, which mingles its less grateful odours with the fragrance of the tea. ❧

Where many questions are to be asked, some will be omitted. I forgot to inquire how they were supplied with so much exotick luxury. Perhaps the French may bring them wine for wool, and the Dutch give them tea and coffee at the fishing season, in exchange for fresh provision. Their trade is unconstrained; they pay no customs, for there is no officer to demand them; whatever, therefore, is made dear only by impost, is obtained here at an easy rate.

— A dinner in the Western Islands differs very little from a dinner in England, except that, in the place of tarts, there are always set different preparations of milk. This part of their diet will admit some improvement. Though they have milk, and eggs, and sugar, few of them know how to compound them in a custard. Their gardens afford them no great variety, but they have always some vegetables on the table. Potatoes, at least, are never wanting, which, though they have not known them long, are now one of the principal parts of their food. They are not of the mealy, but the viscous kind.

Their more elaborate cookery, or made dishes, an Englishman, at the first taste, is not likely to approve, but the culinary compositions of every country, are often such as become grateful to other nations only by degrees; though I have read a French author, who, in the elation of his heart, says, that French cookery pleases all foreigners, but foreign cookery never satisfies a Frenchman.

A JOURNEY TO THE HEBRIDES

Their suppers are like their dinners, various, and plentiful. The table is always covered with elegant linen. Their plates for common use are often of that kind of manufacture, which is called cream-coloured, or queen's ware. They use silver on all occasions where it is common in England, nor did I ever find a spoon of horn but in one house.

The knives are not often either very bright, or very sharp. They are, indeed, instruments of which the Highlanders have not been long acquainted with the general use. They were not regularly laid on the table, before the prohibition of arms, and the change of dress. Thirty years ago the Highlander wore his knife as a companion to his dirk or dagger, and when the company sat down to meat, the men, who had knives, cut the flesh into small pieces for the women, who with their fingers conveyed it to their mouths.

There was, perhaps, never any change of national manners so quick, so great, and so general, as that which has operated in the Highlands by the last conquest, and the subsequent laws. We came thither too late to see what we expected, a people of peculiar appearance, and a system of antiquated life. The clans retain little now of their original character; their ferocity of temper is softened, their military ardour is extinguished, their dignity of independence is suppressed, their contempt of governmentsubdued, and their reverence for their chiefs abated. Of what they had before the late conquest of their country, there remain only their language and their poverty. Their language is attacked on

A JOURNEY TO THE HEBRIDES

every side. Schools are erected, in which English only is taught, and there were lately some who thought it reasonable to refuse them a version of the holy scriptures, that they might have no monument of their mother-tongue.

That their poverty is gradually abated, cannot be mentioned among the displeasing consequences of subjection. They are now acquainted with money, and the possibility of gain will, by degrees, make them industrious. Such is the effect of the late regulations, that a longer journey than to the Highlands must be taken by him whose curiosity pants for savage virtues and barbarous grandeur.

At the first intermission of the stormy weather we were informed, that the boat, which was to convey us to Raasay, attended us on the coast. We had, from this time, our intelligence facilitated, and our conversation enlarged, by the company of Mr. Macqueen, minister of a parish in Sky, whose knowledge and politeness give him a title equally to kindness and respect, and who, from this time, never forsook us till we were preparing to leave Sky, and the adjacent places.

The boat was under the direction of Mr. Malcolm Macleod, a gentleman of Raasay. The water was calm, and the rowers were vigorous; so that our passage was quick and pleasant. When we came near the island, we saw the laird's house, a neat modern fabrick, and found Mr. Macleod, the proprietor of the island, with many gentlemen, expecting us on the beach. We had, as at all other places, some difficulty in landing. The crags were irregu-

A JOURNEY TO THE HEBRIDES

larly broken, and a false step would have been very mischievous.

It seemed that the rocks might, with no great labour, have been hewn almost into a regular flight of steps; and, as there are no other landing places, I considered this rugged ascent as the consequence of a form of life inured to hardships, and, therefore, not studious of nice accommodations. But I know not whether, for many ages, it was not considered as a part of military policy, to keep the country not easily accessible. The rocks are natural fortifications, and an enemy, climbing with difficulty, was easily destroyed by those who stood high above him.

Our reception exceeded our expectations. We found nothing but civility, elegance, and plenty. After the usual refreshments, and the usual conversation, the evening came upon us. The carpet was then rolled off the floor; the musician was called, and the whole company was invited to dance, nor did ever fairies trip with greater alacrity. The general air of festivity, which predominated in this place, so far remote from all those regions which the mind has been used to contemplate as the mansions of pleasure, struck the imagination with a delightful surprise, analogous to that which is felt at an unexpected emersion from darkness into light.

When it was time to sup, the dance ceased, and six and thirty persons sat down to two tables in the same room. After supper the ladies sung Erse songs, to which I listened, as an English audience to an Italian opera, delighted with the sound of words which I did not understand.

A JOURNEY TO THE HEBRIDES

I inquired the subjects of the songs, and was told of one, that it was a love song, and of another, that it was a farewell, composed by one of the islanders that was going, in this epidemical fury of emigration, to seek his fortune in America. What sentiments would rise, on such an occasion, in the heart of one who had not been taught to lament by precedent, I should gladly have known; but the lady, by whom I sat, thought herself not equal to the work of translating.

Mr. Macleod is the proprietor of the islands of Raasay, Rona, and Fladda, and possesses an extensive district in Sky. The estate has not, during four hundred years, gained or lost a single acre.

One of the old Highland alliances has continued for two hundred years, and is still subsisting between Macleod of Raasay, and Macdonald of Sky, in consequence of which, the survivor always inherits the arms of the deceased; a natural memorial of military friendship. At the death of the late sir James Macdonald, his sword was delivered to the present laird of Raasay.

The family of Raasay consists of the laird, the lady, three sons, and ten daughters. For the sons there is a tutor in the house, and the lady is said to be very skilful and diligent in the education of the girls. More gentleness of manners, or a more pleasing appearance of domestick society, is not found in the most polished countries.

Raasay is the only inhabited island in Mr. Macleod's possession. Rona and Fladda afford only pasture for cattle, of which one hundred and sixty

A JOURNEY TO THE HEBRIDES

winter in Rona, under the superintendence of a solitary herdsman.

The length of Raasay is, by computation, fifteen miles, and the breadth two. These countries have never been measured, and the computation by miles is negligent and arbitrary. We observed, in travelling, that the nominal and real distance of places had very little relation to each other. Raasay, probably, contains near a hundred square miles. It affords not much ground, notwithstanding its extent, either for tillage or pasture; for it is rough, rocky, and barren. The cattle often perish by falling from the precipices. It is, like the other islands, I think, generally naked of shade, but it is naked by neglect; for the laird has an orchard, and very large forest-trees grow about his house. Like other hilly countries it has many rivulets. One of the brooks turns a corn-mill, and at least one produces trout.

In the streams or fresh lakes of the islands, I have never heard of any other fish than trouts and eels. The trouts which I have seen are not large; the colour of their flesh is tinged as in England. Of their eels I can give no account, having never tasted them; for, I believe, they are not considered as wholesome food.

It is not very easy to fix the principles upon which mankind have agreed to eat some animals, and reject others; and as the principle is not evident, it is not uniform. That which is selected as delicate in one country, is, by its neighbours, abhorred as loathsome. The Neapolitans lately refused to eat potatoes in a famine. An Englishman is not easily

A JOURNEY TO THE HEBRIDES

persuaded to dine on snails with an Italian, on frogs with a Frenchman, or on horse-flesh with a Tartar. The vulgar inhabitants of Sky, I know not whether of the other islands, have not only eels, but pork and bacon in abhorrence, and, accordingly, I never saw a hog in the Hebrides, except one at Dunvegan.

Raasay has wild fowl in abundance, but neither deer, hares, nor rabbits. Why it has them not, might be asked, but that of such questions there is no end. Why does any nation want what it might have? Why are not spices transplanted to America? Why does tea continue to be brought from China? Life improves but by slow degrees, and much in every place is yet to do. Attempts have been made to raise roebucks in Raasay, but without effect: the young ones it is extremely difficult to rear, and the old can very seldom be taken alive.

Hares and rabbits might be more easily obtained. That they have few or none of either in Sky, they impute to the ravage of the foxes, and have, therefore, set, for some years past, a price upon their heads, which, as the number was diminished, has been gradually raised, from three shillings and sixpence to a guinea, a sum so great in this part of the world, that, in a short time, Sky may be as free from foxes, as England from wolves. The fund for these rewards is a tax of sixpence in the pound, imposed by the farmers on themselves, and said to be paid with great willingness.

The beasts of prey in the islands are foxes, otters, and weasels. The foxes are bigger than those of

A JOURNEY TO THE HEBRIDES

England; but the otters exceed ours in a far greater proportion. I saw one at Armidel, of a size much beyond that which I supposed them ever to attain; and Mr. Maclean, the heir of Col, a man of middle stature, informed me that he once shot an otter, of which the tail reached the ground, when he held up the head to a level with his own. I expected the otter to have a foot particularly formed for the art of swimming; but, upon examination, I did not find it differing much from that of a spaniel. As he preys in the sea, he does little visible mischief, and is killed only for his fur. White otters are sometimes seen.

In Raasay they might have hares and rabbits, for they have no foxes. Some depredations, such as were never made before, have caused a suspicion that a fox has been lately landed in the island by spite or wantonness. This imaginary stranger has never yet been seen, and, therefore, perhaps, the mischief was done by some other animal. It is not likely that a creature so ungentle, whose head could have been sold in Sky for a guinea, should be kept alive only to gratify the malice of sending him to prey upon a neighbour: and the passage from Sky is wider than a fox would venture to swim, unless he were chased by dogs into the sea, and, perhaps, than his strength would enable him to cross. How beasts of prey came into any islands is not easy to guess. In cold countries they take advantage of hard winters, and travel over the ice; but this is a very scanty solution; for they are found where they have no discoverable means of coming.

A JOURNEY TO THE HEBRIDES

The corn of this island is but little. I saw the harvest of a small field. The women reaped the corn, and the men bound up the sheaves. The strokes of the sickle were timed by the modulation of the harvest-song, in which all their voices were united. They accompany in the Highlands every action, which can be done in equal time, with an appropriated strain. which has, they say, not much meaning; but its effects are regularity and cheerfulness. The ancient proceleusmatick song, by which the rowers of galleys were animated, may be supposed to have been of this kind. There is now an oar-song used by the Hebridians.

The ground of Raasay seems fitter for cattle than for corn, and of black cattle I suppose the number is very great. The laird himself keeps a herd of four hundred, one hundred of which are annually sold. Of an extensive domain which he holds in his own hands, he considers the sale of cattle as repaying him the rent, and supports the plenty of a very liberal table with the remaining product.

Raasay is supposed to have been very long inhabited. On one side of it, they show caves into which the rude nations of the first ages retreated from the weather. These dreary vaults might have had other uses. There is still a cavity near the house called the oar-cave, in which the seamen, after one of those piratical expeditions which in rougher times were very frequent, used, as tradition tells, to hide their oars. This hollow was near the sea, that nothing so necessary might be far to be fetched; and it was secret, that enemies, if they landed, could find noth-

A JOURNEY TO THE HEBRIDES

ing. Yet it is not very evident of what use it was to hide their oars from those, who, if they were masters of the coast, could take away their boats.

A proof much stronger of the distance at which the first possessours of this island lived from the present time, is afforded by the stone heads of arrows, which are very frequently picked up. The people call them elf-bolts, and believe that the fairies shoot them at the cattle. They nearly resemble those which Mr. Banks has lately brought from the savage countries in the Pacifick Ocean, and must have been made by a nation, to which the use of metals was unknown.

The number of this little community has never been counted by its ruler, nor have I obtained any positive account, consistent with the result of political computation. Not many years ago, the late laird let out one hundred men upon a military expedition. The sixth part of a people is supposed capable of bearing arms: Raasay had, therefore, six hundred inhabitants. But, because it is not likely that every man able to serve in the field would follow the summons, or that the chief would leave his lands totally defenceless, or take away all the hands qualified for labour, let it be supposed, that half as many might be permitted to stay at home. The whole number will then be nine hundred, or nine to a square mile; a degree of populousness greater than those tracts of desolation can often show. They are content with their country, and faithful to their chiefs, and yet uninfected with the fever of migration.

A JOURNEY TO THE HEBRIDES

Near the house at Raasay is a chapel unroofed and ruinous, which has long been used only as a place of burial. About the churches in the islands are small squares enclosed with stone, which belong to particular families, as repositories for the dead. At Raasay there is one, I think, for the proprietor, and one for some collateral house.

It is told by Martin, that at the death of the lady of the island, it has been here the custom to erect a cross. This we found not to be true. The stones that stand about the chapel at a small distance, some of which, perhaps, have crosses cut upon them, are believed to have been not funeral monuments, but the ancient boundaries of the sanctuary or consecrated ground.

Martin was a man not illiterate; he was an inhabitant of Sky, and, therefore, was within reach of intelligence and with no great difficulty might have visited the places which he undertakes to describe; yet, with all his opportunities, he has often suffered himself to be deceived. He lived in the last century, when the chiefs of the clans had lost little of their original influence. The mountains were yet unpenetrated, no inlet was opened to foreign novelties, and the feudal institutions operated upon life with their full force. He might, therefore, have displayed a series of subordination and a form of government, which in more luminous and improved regions, have been long forgotten, and have delighted his readers with many uncouth customs that are now disused, and wild opinions that prevail no longer. But he probably had not knowledge of the

A JOURNEY TO THE HEBRIDES

world sufficient to qualify him for judging what would deserve or gain the attention of mankind. The mode of life which was familiar to himself, he did not suppose unknown to others, nor imagine that he could give pleasure by telling that, of which it was, in his little country, impossible to be ignorant.

What he has neglected cannot now be performed. In nations, where there is hardly the use of letters, what is once out of sight is lost for ever. They think but little, and of their few thoughts, none are wasted on the past, in which they are neither interested by fear nor hope. Their only registers are stated observances and practical representations. For this reason, an age of ignorance is an age of ceremony. Pageants and processions, and commemorations, gradually shrink away, as better methods come into use of recording events, and preserving rights.

It is not only in Raasay that the chapel is unroofed and useless; through the few islands which we visited, we neither saw nor heard of any house of prayer, except in Sky, that was not in ruins. The malignant influence of calvinism has blasted ceremony and decency together; and if the remembrance of papal superstition is obliterated, the monuments of papal piety are likewise effaced.

It has been, for many years, popular to talk of the lazy devotion of the Romish clergy; over the sleepy laziness of men that erected churches, we may indulge our superiority with a new triumph, by comparing it with the fervid activity of those who suffer them to fall.

Of the destruction of churches, the decay of re-

A JOURNEY TO THE HEBRIDES

ligion must in time be the consequence; for while the publick acts of the ministry are now performed in houses, a very small number can be present; and as the greater part of the islanders make no use of books, all must necessarily live in total ignorance, who want the opportunity of vocal instruction.

From these remains of ancient sanctity, which are every where to be found, it has been conjectured that, for the last two centuries, the inhabitants of the islands have decreased in number. This argument, which supposes that the churches have been suffered to fall, only because they were no longer necessary, would have some force, if the houses of worship still remaining were sufficient for the people. But since they have now no churches at all, these venerable fragments do not prove the people of former times to have been more numerous, but to have been more devout. If the inhabitants were doubled, with their present principles, it appears not that any provision for publick worship would be made. Where the religion of a country enforces consecrated buildings, the number of those buildings may be supposed to afford some indication, however uncertain, of the populousness of the place; but where, by a change of manners, a nation is contented to live without them, their decay implies no diminution of inhabitants.

Some of these dilapidations are said to be found in islands now uninhabited; but I doubt whether we can thence infer that they were ever peopled. The religion of the middle age is well known to have placed too much hope in lonely austerities.

A JOURNEY TO THE HEBRIDES

Voluntary solitude was the great art of propitiation, by which crimes were effaced, and conscience was appeased; it is, therefore, not unlikely, that oratories were often built in places where retirement was sure to have no disturbance.

Raasay has little that can detain a traveller, except the laird and his family; but their power wants no auxiliaries. Such a seat of hospitality, amidst the winds and waters, fills the imagination with a delightful contrariety of images. Without is the rough ocean, and the rocky land, the beating billows, and the howling storm: within is plenty and elegance, beauty and gaiety, the song and the dance. In Raasay, if I could have found an Ulysses, I had fancied a Phæacia.

At Raasay, by good fortune, Macleod, so the chief of the clan is called, was paying a visit, and by him we were invited to his seat at Dunvegan. Raasay has a stout boat, built in Norway, in which, with six oars, he conveyed us back to Sky. We landed at Port Re, so called, because James the fifth of Scotland, who had curiosity to visit the islands, came into it. The port is made by an inlet of the sea, deep and narrow, where a ship lay waiting to dispeople Sky, by carrying the natives away to America.

In coasting Sky, we passed by the cavern in which it was the custom, as Martin relates, to catch birds in the night, by making a fire at the entrance. This practice is disused; for the birds, as is known often to happen, have changed their haunts.

Here we dined at a publick house, I believe the

A JOURNEY TO THE HEBRIDES

only inn of the island, and having mounted our horses, travelled in the manner already described, till we came to Kingsborough, a place distinguished by that name, because the king lodged here when he landed at Port Re. We were entertained with the usual hospitality by Mr. Macdonald, and his lady Flora Macdonald, a name that will be mentioned in history, and, if courage and fidelity be virtues, mentioned with honour. She is a woman of middle stature, soft features, gentle manners, and elegant presence.

In the morning we sent our horses round a promontory to meet us, and spared ourselves part of the day's fatigue, by crossing an arm of the sea. We had at last some difficulty in coming to Dunvegan; for our way led over an extensive moor, where every step was to be taken with caution, and we were often obliged to alight, because the ground could not be trusted. In travelling this watery flat, I perceived that it had a visible declivity, and might, without much expense or difficulty, be drained. But difficulty and expense are relative terms, which have different meanings in different places.

To Dunvegan we came, very willing to be at rest, and found our fatigue amply recompensed by our reception. Lady Macleod, who had lived many years in England, was newly come hither with her son and four daughters, who knew all the arts of southern elegance, and all the modes of English economy. Here, therefore, we settled, and did not spoil the present hour with thoughts of departure.

Dunvegan is a rocky prominence, that juts out into

A JOURNEY TO THE HEBRIDES

a bay, on the west side of Sky. The house, which is the principal seat of Macleod, is partly old and partly modern; it is built upon the rock, and looks upon the water. It forms two sides of a small square: on the third side is the skeleton of a castle of unknown antiquity, supposed to have been a Norwegian fortress, when the Danes were masters of the islands. It is so nearly entire, that it might have easily been made habitable, were there not an ominous tradition in the family, that the owner shall not long outlive the reparation. The grandfather of the present laird, in defiance of prediction, began the work, but desisted in a little time, and applied his money to worse uses.

As the inhabitants of the Hebrides lived, for many ages, in continual expectation of hostilities, the chief of every clan resided in a fortress. This house was accessible only from the water, till the last possessour opened an entrance by stairs upon the land.

They had formerly reason to be afraid, not only of declared wars, and authorized invaders, or of roving pirates, which, in the northern seas, must have been very common; but of inroads and insults from rival clans, who, in the plenitude of feudal independence, asked no leave of their sovereign to make war on one another. Sky has been ravished by a feud between the two mighty powers of Macdonald and Macleod. Macdonald having married a Macleod, upon some discontent dismissed her, perhaps because she had brought him no children. Before the reign of James the fifth, a Highland

A JOURNEY TO THE HEBRIDES

laird made a trial of his wife for a certain time, and if she did not please him, he was then at liberty to send her away. This, however, must always have offended, and Macleod, resenting the injury, whatever were its circumstances, declared, that the wedding had been solemnized without a bonfire, but that the separation should be better illuminated; and raising a little army, set fire to the territories of Macdonald, who returned the visit, and prevailed.

Another story may show the disorderly state of insular neighbourhood. The inhabitants of the isle of Egg, meeting a boat manned by Macleods, tied the crew hand and foot, and set them adrift. Macleod landed upon Egg, and demanded the offenders; but the inhabitants, refusing to surrender them, retreated to a cavern, into which they thought their enemies unlikely to follow them. Macleod choked them with smoke, and left them lying dead by families as they stood.

Here the violence of the weather confined us for some time, not at all to our discontent or inconvenience. We would, indeed, very willingly have visited the islands, which might be seen from the house scattered in the sea, and I was particularly desirous to have viewed Isay; but the storms did not permit us to launch a boat, and we were condemned to listen in idleness to the wind, except when we were better engaged by listening to the ladies.

We had here more wind than waves, and suffered the severity of a tempest, without enjoying its magnificence. The sea being broken by the multitude of islands, does not roar with so much noise,

A JOURNEY TO THE HEBRIDES

nor beat the storm with such foamy violence, as I have remarked on the coast of Sussex. Though, while I was in the Hebrides, the wind was extremely turbulent, I never saw very high billows.

The country about Dunvegan is rough and barren. There are no trees, except in the orchard, which is a low sheltered spot, surrounded with a wall.

When this house was intended to sustain a siege, a well was made in the court, by boring the rock downwards, till water was found, which, though so near to the sea, I have not heard mentioned as brackish, though it has some hardness, or other qualities, which make it less fit for use; and the family is now better supplied from a stream, which runs by the rock, from two pleasing waterfalls.

Here we saw some traces of former manners, and heard some standing traditions. In the house is kept an ox's horn, hollowed so as to hold perhaps two quarts, which the heir of Macleod was expected to swallow at one draught, as a test of his manhood, before he was permitted to bear arms, or could claim a seat among the men. It is held, that the return of the laird to Dunvegan, after any considerable absence, produces a plentiful capture of herrings; and that, if any woman crosses the water to the opposite island, the herrings will desert the coast. Boethius tells the same of some other place. This tradition is not uniform. Some hold that no woman may pass, and others that none may pass but a Macleod.

Among other guests, which the hospitality of Dun-

A JOURNEY TO THE HEBRIDES

vegan brought to the table, a visit was paid by the laird and lady of a small island south of Sky, of which the proper name is Muack, which signifies swine. It is commonly called Muck, which the proprietor not liking, has endeavoured, without effect, to change to Monk. It is usual to call gentlemen in Scotland by the name of their possessions, as Raasay, Bernera, Loch Buy, a practice necessary in countries inhabited by clans, where all that live in the same territory have one name, and must be therefore discriminated by some addition. This gentleman, whose name, I think, is Maclean, should be regularly called Muck; but the appellation, which he thinks too coarse for his island, he would like still less for himself, and he is, therefore, addressed by the title of, Isle of Muck.

This little island, however it be named, is of considerable value. It is two English miles long, and three quarters of a mile broad, and consequently contains only nine hundred and sixty English acres. It is chiefly arable. Half of this little dominion the laird retains in his own hand, and on the other half, live one hundred and sixty persons, who pay their rent by exported corn. What rent they pay, we were not told, and could not decently inquire. The proportion of the people to the land is such, as the most fertile countries do not commonly maintain.

The laird, having all his people under his immediate view, seems to be very attentive to their happiness. The devastation of the smallpox, when it visits places where it comes seldom, is well known. He has disarmed it of its terrour at Muack, by in-

A JOURNEY TO THE HEBRIDES

oculating eighty of his people. The expense was two shillings and sixpence a head. Many trades they cannot have among them, but upon occasion, he fetches a smith from the isle of Egg, and has a tailor from the mainland, six times a year. This island well deserved to be seen, but the laird's absence left us no opportunity.

Every inhabited island has its appendant and subordinate islets. Muck, however small, has yet others smaller about it, one of which has only ground sufficient to afford pasture for three wethers.

At Dunvegan I had tasted lotus, and was in danger of forgetting that I was ever to depart, till Mr. Boswell sagely reproached me with my sluggishness and softness. I had no very forcible defence to make; and we agreed to pursue our journey. Macleod accompanied us to Ulinish, where we were entertained by the sheriff of the island.

Mr. Macqueen travelled with us, and directed our attention to all that was worthy of observation. With him we went to see an ancient building, called a dun or borough. It was a circular enclosure, about forty-two feet in diameter, walled round with loose stones, perhaps to the height of nine feet. The walls are very thick, diminishing a little towards the top, and, though in these countries stone is not brought far, must have been raised with much labour. Within the great circle were several smaller rounds of wall, which formed distinct apartments. Its date and its use are unknown. Some suppose it the original seat of the chiefs of the Macleods. Mr. Macqueen thought it a Danish fort.

A JOURNEY TO THE HEBRIDES

The entrance is covered with flat stones, and is narrow, because it was necessary that the stones which lie over it, should reach from one wall to the other; yet, strait as the passage is, they seem heavier than could have been placed where they now lie, by the naked strength of as many men as might stand about them. They were probably raised by putting long pieces of wood under them, to which the action of a long line of lifters might be applied. Savages, in all countries, have patience proportionate to their unskilfulness, and are content to attain their end by very tedious methods.

If it was ever roofed, it might once have been a dwelling, but as there is no provision for water, it could not have been a fortress. In Sky, as in every other place, there is an ambition of exalting whatever has survived memory, to some important use, and referring it to very remote ages. I am inclined to suspect, that in lawless times, when the inhabitants of every mountain stole the cattle of their neighbour, these enclosures were used to secure the herds and flocks in the night. When they were driven within the wall, they might be easily watched, and defended as long as could be needful; for the robbers durst not wait till the injured clan should find them in the morning.

The interiour enclosures, if the whole building were once a house, were the chambers of the chief inhabitants. If it was a place of security for cattle, they were probably the shelters of the keepers.

From the Dun we were conducted to another place of security, a cave carried a great way under

A JOURNEY TO THE HEBRIDES

ground, which had been discovered by digging after a fox. These caves, of which many have been found, and many, probably, remain concealed, are formed, I believe, commonly by taking advantage of a hollow, where banks or rocks rise on either side. If no such place can be found, the ground must be cut away. The walls are made by piling stones against the earth, on either side. It is then roofed by large stones laid across the cavern, which therefore cannot be wide. Over the roof, turfs were placed, and grass was suffered to grow; and the mouth was concealed by bushes, or some other cover.

These caves were represented to us as the cabins of the first rude inhabitants, of which, however, I am by no means persuaded. This was so low, that no man could stand upright in it. By their construction they are all so narrow, that two can never pass along them together, and being subterraneous, they must be always damp. They are not the work of an age much ruder than the present; for they are formed with as much art as the construction of a common hut requires. I imagine them to have been places only of occasional use, in which the islander, upon a sudden alarm, hid his utensils or his clothes, and perhaps sometimes his wife and children.

This cave we entered, but could not proceed the whole length, and went away without knowing how far it was carried. For this omission we shall be blamed, as we perhaps have blamed other travellers; but the day was rainy, and the ground was damp. We had with us neither spades nor pickaxes, and if

A JOURNEY TO THE HEBRIDES

love of ease surmounted our desire of knowledge, the offence has not the invidiousness of singularity.

Edifices, either standing or ruined, are the chief records of an illiterate nation. In some part of this journey, at no great distance from our way, stood a shattered fortress, of which the learned minister, to whose communication we are much indebted, gave us an account.

“Those,” said he, “are the walls of a place of refuge, built in the time of James the sixth, by Hugh Macdonald, who was next heir to the dignity and fortune of his chief. Hugh, being so near his wish, was impatient of delay; and had art and influence sufficient to engage several gentlemen in a plot against the laird’s life. Something must be stipulated on both sides; for they would not dip their hands in blood merely for Hugh’s advancement. The compact was formally written, signed by the conspirators, and placed in the hands of one Macleod.

“It happened that Macleod had sold some cattle to a drover, who, not having ready money, gave him a bond for payment. The debt was discharged, and the bond redemanded; which Macleod, who could not read, intending to put into his hands, gave him the conspiracy. The drover, when he had read the paper, delivered it privately to Macdonald, who, being thus informed of his danger, called his friends together, and provided for his safety. He made a publick feast, and inviting Hugh Macdonald and his confederates, placed each of them at the table, between two men of known fidelity. The compact of conspiracy was then shown, and every man

A JOURNEY TO THE HEBRIDES

confronted with his own name. Macdonald acted with great moderation. He upbraided Hugh both with disloyalty and ingratitude; but told the rest, that he considered them as men deluded and misinformed. Hugh was sworn to fidelity, and dismissed with his companions; but he was not generous enough to be reclaimed by lenity; and finding no longer any countenance among the gentlemen, endeavoured to execute the same design by meaner hands. In this practice he was detected, taken to Macdonald's castle, and imprisoned in the dungeon. When he was hungry, they let down a plentiful meal of salted meat; and when, after his repast, he called for drink, conveyed to him a covered cup, which, when he lifted the lid, he found empty. From that time they visited him no more, but left him to perish in solitude and darkness."

We were then told of a cavern by the seaside, remarkable for the powerful reverberation of sounds. After dinner we took a boat, to explore this curious cavity. The boatmen, who seemed to be of a rank above that of common drudges, inquired who the strangers were, and being told we came one from Scotland, and the other from England, asked if the Englishman could recount a long genealogy. What answer was given them, the conversation being in Erse, I was not much inclined to examine.

They expected no good event of the voyage; for one of them declared that he heard the cry of an English ghost. This omen I was not told till after our return, and, therefore, cannot claim the dignity of despising it.

A JOURNEY TO THE HEBRIDES

The sea was smooth. We never left the shore, and came without any disaster to the cavern, which we found rugged and misshapen, about one hundred and eighty feet long, thirty wide in the broadest part, and in the loftiest, as we guessed, about thirty high. It was now dry, but at high water the sea rises in it near six feet. Here I saw what I had never seen before, limpets and muscles in their natural state. But as a new testimony to the veracity of common fame, here was no echo to be heard.

We then walked through a natural arch in the rock, which might have pleased us by its novelty, had the stones, which encumbered our feet, given us leisure to consider it. We were shown the gummy seed of the kelp, that fastens itself to a stone, from which it grows into a strong stalk.

In our return, we found a little boy upon the point of a rock, catching with his angle a supper for the family. We rowed up to him, and borrowed his rod, with which Mr. Boswell caught a cuddy.

The cuddy is a fish of which I know not the philosophical name. It is not much bigger than a gudgeon, but it is of great use in these islands, as it affords the lower people both food, and oil for their lamps. Cuddies are so abundant, at some times of the year, that they are caught like white bait in the Thames, only by dipping a basket and drawing it back.

If it were always practicable to fish, these islands could never be in much danger from famine; but unhappily, in the winter, when other provision fails, the seas are commonly too rough for nets, or boats.

A JOURNEY TO THE HEBRIDES

From Ulinish our next stage was to Talisker, the house of colonel Macleod, an officer in the Dutch service, who in this time of universal peace, has for several years been permitted to be absent from his regiment. Having been bred to physick, he is consequently a scholar, and his lady, by accompanying him in his different places of residence, is become skilful in several languages. Talisker is the place, beyond all that I have seen, from which the gay and the jovial seem utterly excluded; and where the hermit might expect to grow old in meditation, without possibility of disturbance or interruption. It is situated very near the sea, but upon a coast where no vessel lands, but when it is driven by a tempest on the rocks. Towards the land are lofty hills streaming with waterfals. The garden is sheltered by firs, or pines, which grow there so prosperously, that some which the present inhabitant planted, are very high and thick.

At this place we very happily met with Mr. Donald Maclean, a young gentleman, the eldest son of the laird of Col, heir to a very great extent of land, and so desirous of improving his inheritance, that he spent a considerable time among the farmers of Hertfordshire and Hampshire, to learn their practice. He worked with his own hands at the principal operations of agriculture, that he might not deceive himself by a false opinion of skill, which, if he should find it deficient at home, he had no means of completing. If the world has agreed to praise the travels and manual labours of the czar of Muscovy, let Col have his share of the like applause,

A JOURNEY TO THE HEBRIDES

in the proportion of his dominions to the empire of Russia.

This young gentleman was sporting in the mountains of Sky, and when he was weary with following his game, repaired for lodging to Talisker. At night he missed one of his dogs, and, when he went to seek him in the morning, found two eagles feeding on his carcass.

Col, for he must be named by his possessions, hearing that our intention was to visit Iona, offered to conduct us to his chief, sir Allan Maclean, who lived in the isle of Inch Kenneth, and would readily find us a convenient passage. From this time was formed an acquaintance, which, being begun by kindness, was accidentally continued by constraint; we derived much pleasure from it, and I hope have given him no reason to repent it.

The weather was now almost one continued storm, and we were to snatch some happy intermission to be conveyed to Mull, the third island of the Hebrides, lying about a degree south of Sky, whence we might easily find our way to Inch Kenneth, where sir Allan Maclean resided, and afterward to Iona.

For this purpose, the most commodious station that we could take was Armidel, which sir Alexander Macdonald had now left to a gentleman, who lived there as his factor or steward.

In our way to Armidel was Coriatachan, where we had already been, and to which, therefore, we were very willing to return. We staid, however, so long at Talisker, that a great part of our journey

A JOURNEY TO THE HEBRIDES

was performed in the gloom of the evening. In travelling even thus almost without light through naked solitude, when there is a guide whose conduct may be trusted, a mind not naturally too much disposed to fear, may preserve some degree of cheerfulness; but what must be the solicitude of him who should be wandering, among the crags and hollows, benighted, ignorant, and alone?

The fictions of the Gothick romances were not so remote from credibility as they are now thought. In the full prevalence of the feudal institution, when violence desolated the world, and every baron lived in a fortress, forests and castles were regularly succeeded by each other, and the adventurer might very suddenly pass from the gloom of woods, or the ruggedness of moors, to seats of plenty, gaiety, and magnificence. Whatever is imagined in the wildest tale, if giants, dragons, and enchantment be excepted, would be felt by him, who, wandering in the mountains without a guide, or upon the sea without a pilot, should be carried amidst his terrour and uncertainty, to the hospitality and elegance of Raasay or Dunvegan.

To Coriatachan at last we came, and found ourselves welcomed as before. Here we staid two days, and made such inquiries as curiosity suggested. The house was filled with company, among whom Mr. Macpherson and his sister distinguished themselves by their politeness and accomplishments. By him we were invited to Ostig, a house not far from Armidel, where we might easily hear of a boat,

A JOURNEY TO THE HEBRIDES

when the weather would suffer us to leave the island.

At Ostig, of which Mr. Macpherson is minister, we were entertained for some days, then removed to Armidel, where we finished our observations on the island of Sky.

As this island lies in the fifty-seventh degree, the air cannot be supposed to have much warmth. The long continuance of the sun above the horizon, does, indeed, sometimes produce great heat in northern latitudes; but this can only happen in sheltered places, where the atmosphere is to a certain degree stagnant, and the same mass of air continues to receive for many hours the rays of the sun, and the vapours of the earth. Sky lies open on the west and north to a vast extent of ocean, and is cooled, in the summer, by a perpetual ventilation, but by the same blast is kept warm in winter. Their weather is not pleasing. Half the year is deluged with rain. From the autumnal to the vernal equinox, a dry day is hardly known, except when the showers are suspended by a tempest. Under such skies can be expected no great exuberance of vegetation. Their winter overtakes their summer, and their harvest lies upon the ground drenched with rain. The autumn struggles hard to produce some of our early fruits. I gathered gooseberries in September; but they were small, and the husk was thick.

The winter is seldom such as puts a full stop to the growth of plants, or reduces the cattle to live wholly on the surplusage of the summer. In the year seventy-one they had a severe season, remem-

A JOURNEY TO THE HEBRIDES

bered by the name of the Black Spring from which the island has not yet recovered. The snow lay long upon the ground, a calamity hardly known before. Part of their cattle died for want, part were unseasonably sold to buy sustenance for the owners; and, what I have not read or heard of before, the kine that survived were so emaciated and dispirited, that they did not require the male at the usual time. Many of the roebucks perished.

The soil, as in other countries, has its diversities. In some parts there is only a thin layer of earth spread upon a rock, which bears nothing, but short brown heath, and perhaps is not generally capable of any better product. There are many bogs or mosses of greater or less extent, where the soil cannot be supposed to want depth, though it is too wet for the plough. But we did not observe in these any aquatick plants. The valleys and the mountains are alike darkened with heath. Some grass, however, grows here and there, and some happier spots of earth are capable of tillage.

Their agriculture is laborious, and, perhaps, rather feeble than unskilful. Their chief manure is seaweed, which, when they lay it to rot upon the field, gives them a better crop than those of the Highlands. They heap sea shells upon the dunghill, which in time moulder into a fertilizing substance. When they find a vein of earth where they cannot use it, they dig it up, and add it to the mould of a more commodious place.

Their corn grounds often lie in such intricacies among the crags, that there is no room for the

A JOURNEY TO THE HEBRIDES

action of a team and plough. The soil is then turned up by manual labour, with an instrument called a crooked spade, of a form and weight which, to me, appeared very incommodious, and would, perhaps, be soon improved in a country where workmen could be easily found, and easily paid. It has a narrow blade of iron fixed to a long and heavy piece of wood, which must have, about a foot and a half above the iron, a knee or flexure with the angle downwards. When the farmer encounters a stone, which is the great impediment of his operations, he drives the blade under it, and bringing the knee or angle to the ground, has in the long handle a very forcible lever.

According to the different mode of tillage, farms are distinguished into *long land* and *short land*. Long land is that which affords room for a plough, and short land is turned up by the spade.

The grain which they commit to the furrows thus tediously formed, is either oats or barley. They do not sow barley without very copious manure, and then they expect from it ten for one, an increase equal to that of better countries; but the culture is so operose, that they content themselves commonly with oats; and who can relate without compassion, that after all their diligence they are to expect only a triple increase? It is in vain to hope for plenty, when a third part of the harvest must be reserved for seed.

When their grain is arrived at the state which they must consider as ripeness, they do not cut, but pull the barley: to the oats they apply the

A JOURNEY TO THE HEBRIDES

sickle. Wheel carriages they have none, but make a frame of timber, which is drawn by one horse, with the two points behind pressing on the ground. On this they sometimes drag home their sheaves, but often convey them home in a kind of open pannier, or frame of sticks, upon the horse's back.

Of that which is obtained with so much difficulty, nothing surely ought to be wasted; yet their method of clearing their oats from the husk, is by parching them in the straw. Thus, with the genuine improvidence of savages, they destroy that fodder, for want of which their cattle may perish. From this practice they have two petty conveniencies; they dry the grain so that it is easily reduced to meal, and they escape the theft of the thresher. The taste contracted from the fire by the oats, as by every other scorched substance, use must long ago have made grateful. The oats that are not parched, must be dried in a kiln.

The barns of Sky I never saw. That which Macleod, of Raasay, had erected near his house was so contrived, because the harvest is seldom brought home dry, as, by perpetual perflation, to prevent the mow from heating.

Of their gardens I can judge only from their tables. I did not observe that the common greens were wanting, and suppose, that by choosing an advantageous exposition, they can raise all the more hardy esculent plants. Of vegetable fragrance, or beauty, they are not yet studious. Few vows are made to Flora in the Hebrides.

They gather a little hay, but the grass is mown

A JOURNEY TO THE HEBRIDES

late; and is so often almost dry and again very wet, before it is housed, that it becomes a collection of withered stalks without taste or fragrance; it must be eaten by cattle that have nothing else, but by most English farmers would be thrown away.

In the islands I have not heard that any subterraneous treasures have been discovered, though where there are mountains, there are commonly minerals. One of the rocks in Col has a black vein, imagined to consist of the ore of lead; but it was never yet opened or essayed. In Sky a black mass was accidentally picked up, and brought into the house of the owner of the land, who found himself strongly inclined to think it a coal, but unhappily, it did not burn in the chimney. Common ores would be here of no great value; for what requires to be separated by fire, must, if it were found, be carried away in its mineral state, here being no fuel for the smelting house or forge. Perhaps by diligent search in this world of stone, some valuable pieces of marble might be discovered. But neither philosophical curiosity, nor commercial industry, have yet fixed their abode here, where the importunity of immediate want, supplied but for the day, and craving on the morrow, has left little room for excursive knowledge, or the pleasing fancies of distant profit.

They have lately found a manufacture considerably lucrative. Their rocks abound with kelp, a sea plant, of which the ashes are melted into glass. They burn kelp in great quantities, and then send it away in ships, which come regularly to purchase them.

A JOURNEY TO THE HEBRIDES

This new source of riches has raised the rents of many maritime farms; but the tenants pay, like all other tenants, the additional rent with great unwillingness; because they consider the profits of the kelp as the mere product of personal labour, to which the landlord contributes nothing. However, as any man may be said to give what he gives the power of gaining, he has certainly as much right to profit from the price of kelp, as of any thing else found or raised upon his ground.

This new trade has excited a long and eager litigation between Macdonald and Macleod, for a ledge of rocks, which, till the value of kelp was known, neither of them desired the reputation of possessing.

The cattle of Sky are not so small as is commonly believed. Since they have sent their beeves in great numbers to southern marts, they have, probably, taken more care of their breed. At stated times the annual growth of cattle is driven to a fair, by a general drover, and with the money, which he returns to the farmer, the rents are paid.

The price regularly expected, is from two to three pounds a head; there was once one sold for five pounds. They go from the islands very lean, and are not offered to the butcher till they have been long fatted in English pastures.

Of their black cattle some are without horns, called by the Scots, *humble* cows, as we call a bee, an *humble* bee, that wants a sting. Whether this difference be specifick, or accidental, though we inquired with great diligence, we could not be informed. We are not very sure that the bull is ever without horns,

A JOURNEY TO THE HEBRIDES

though we have been told, that such bulls there are. What is produced by putting a horned and unhorned male and female together, no man has ever tried, that thought the result worthy of observation. Their horses are, like their cows, of a moderate size. I had no difficulty to mount myself commodiously by the favour of the gentlemen. I heard of very little cows in Barra, and very little horses in Rum, where, perhaps, no care is taken to prevent that diminution of size, which must always happen, where the greater and the less copulate promiscuously, and the young animal is restrained from growth by penury of sustenance.

The goat is the general inhabitant of the earth, complying with every difference of climate and of soil. The goats of the Hebrides are like others: nor did I hear any thing of their sheep to be particularly remarked.

In the penury of these malignant regions, nothing is left that can be converted to food. The goats and the sheep are milked like the cows. A single meal of a goat is a quart, and of a sheep a pint. Such, at least, was the account, which I could extract from those of whom I am not sure that they ever had inquired.

The milk of goats is much thinner than that of cows, and that of sheep is much thicker. Sheep's milk is never eaten before it is boiled; as it is thick, it must be very liberal of curd, and the people of St. Kilda form it into small cheeses.

The stags of the mountains are less than those of our parks or forests, perhaps not bigger than our

A JOURNEY TO THE HEBRIDES

fallow deer. Their flesh has no rankness, nor is inferior in flavour to our common venison. The roebuck I neither saw nor tasted. These are not countries for a regular chase. The deer are not driven with horns and hounds. A sportsman, with his gun in his hand, watches the animal, and when he has wounded him, traces him by the blood.

They have a race of brinded greyhounds, larger and stronger than those with which we course hares, and those are the only dogs used by them for the chase.

Man is, by the use of firearms, made so much an overmatch for other animals, that in all countries, where they are in use, the wild part of the creation sensibly diminishes. There will, probably, not be long either stags or roebucks in the islands. All the beasts of chase would have been lost long ago in countries well inhabited, had they not been preserved by laws for the pleasure of the rich.

There are in Sky neither rats nor mice, but the weasel is so frequent, that he is heard in houses rattling behind chests or beds, as rats in England. They, probably, owe to his predominance, that they have no other vermin; for since the great rat took possession of this part of the world, scarce a ship can touch at any port, but some of his race are left behind. They have within these few years begun to infest the isle of Col, where, being left by some trading vessel, they have increased for want of weasels to oppose them.

— The inhabitants of Sky, and of the other islands, which I have seen, are commonly of the middle

A JOURNEY TO THE HEBRIDES

stature, with fewer among them very tall or very short, than are seen in England; or perhaps, as their numbers are small, the chances of any deviation from the common measure are necessarily few. The tallest men that I saw are among those of higher rank. In regions of barrenness and scarcity, the human race is hindered in its growth by the same causes as other animals.

The ladies have as much beauty here as in other places, but bloom and softness are not to be expected among the lower classes, whose faces are exposed to the rudeness of the climate, and whose features are sometimes contracted by want, and sometimes hardened by the blasts. Supreme beauty is seldom found in cottages or workshops, even where no real hardships are suffered. To expand the human face to its full perfection, it seems necessary that the mind should cooperate by placidness of content, or consciousness of superiority.

Their strength is proportionate to their size, but they are accustomed to run upon rough ground, and, therefore, can with great agility skip over the bog, or clamber the mountain. For a campaign in the wastes of America, soldiers better qualified could not have been found. Having little work to do, they are not willing, nor perhaps able, to endure a long continuance of manual labour, and are, therefore, considered as habitually idle.

Having never been supplied with those accommodations, which life extensively diversified with trades affords, they supply their wants by very insufficient shifts, and endure many inconveniencies,

A JOURNEY TO THE HEBRIDES

which a little attention would easily relieve. I have seen a horse carrying home the harvest on a crate. Under his tail was a stick for a crupper, held at the two ends by twists of straw. Hemp will grow in their islands, and, therefore, ropes may be had. If they wanted hemp, they might make better cordage of rushes, or perhaps of nettles, than of straw.

Their method of life neither secures them perpetual health, nor exposes them to any particular diseases. There are physicians in the islands, who, I believe, all practice chirurgery, and all compound their own medicines.

It is generally supposed, that life is longer in places where there are few opportunities of luxury; but I found no instance here of extraordinary longevity. A cottager grows old over his oaten cakes, like a citizen at a turtle feast. He is, indeed, seldom incommoded by corpulence. Poverty preserves him from sinking under the burden of himself, but he escapes no other injury of time. Instances of long life are often related, which those who hear them are more willing to credit than examine. To be told that any man has attained a hundred years, gives hope and comfort to him who stands trembling on the brink of his own climacterick.

Length of life is distributed impartially, to very different modes of life in very different climates; and the mountains have no greater examples of age and health than the low lands, where I was introduced to two ladies of high quality; one of whom, in her ninety-fourth year, presided at her table with

A JOURNEY TO THE HEBRIDES

the full exercise of all her powers; and the other has attained her eighty-fourth, without any diminution of her vivacity, and with little reason to accuse time of depredations on her beauty.

In the islands, as in most other places, the inhabitants are of different rank, and one does not encroach here upon another. Where there is no commerce nor manufacture, he that is born poor can scarcely become rich; and if none are able to buy estates, he that is born to land, cannot annihilate his family by selling it. This was once the state of these countries. Perhaps there is no example, till within a century and a half, of any family whose estate was alienated, otherwise than by violence or forfeiture. Since money has been brought amongst them, they have found, like others, the art of spending more than they receive; and I saw with grief the chief of a very ancient clan, whose island was condemned by law to be sold for the satisfaction of his creditors.

The name of highest dignity is laird, of which there are in the extensive isle of Sky only three, Macdonald, Macleod, and Mackinnon. The laird is the original owner of the land, whose natural power must be very great, where no man lives but by agriculture; and where the produce of the land is not conveyed through the labyrinths of traffick, but passes directly, from the hand that gathers it, to the mouth that eats it. The laird has all those in his power that live upon his farms. Kings can, for the most part, only exalt or degrade. The laird, at pleasure, can feed or starve, can give bread, or withhold it. This inherent power was yet strengthened

A JOURNEY TO THE HEBRIDES

by the kindness of consanguinity, and the reverence of patriarchal authority. The laird was the father of the clan, and his tenants commonly bore his name. And to these principles of original command was added, for many ages, an exclusive right of legal jurisdiction.

This multifarious and extensive obligation operated with force scarcely credible. Every duty, moral or political, was absorbed in affection and adherence to the chief. Not many years have passed since the clans knew no law but the laird's will. He told them to whom they should be friends or enemies, what king they should obey, and what religion they should profess.

When the Scots first rose in arms against the succession of the house of Hanover, Lovat, the chief of the Frasers, was in exile for a rape. The Frasers were very numerous, and very zealous against the government. A pardon was sent to Lovat. He came to the English camp, and the clan immediately deserted to him.

Next in dignity to the laird is the tacksman; a large taker or leaseholder of land, of which he keeps part as a domain in his own hand, and lets part to under-tenants. The tacksman is necessarily a man capable of securing to the laird the whole rent, and is commonly a collateral relation. These *tacks*, or subordinate possessions, were long considered as hereditary, and the occupant was distinguished by the name of the place at which he resided. He held a middle station, by which the highest and the lowest orders were connected. He paid rent and rev-

A JOURNEY TO THE HEBRIDES

erence to the laird, and received them from the tenants. This tenure still subsists, with its original operation, but not with the primitive stability. Since the islanders, no longer content to live, have learned the desire of growing rich, an ancient dependant is in danger of giving way to a higher bidder, at the expense of domestick dignity, and hereditary power. The stranger, whose money buys him preference, considers himself as paying for all that he has, and is indifferent about the laird's honour or safety. The commodiousness of money is indeed great; but there are some advantages which money cannot buy, and which, therefore, no wise man will, by the love of money, be tempted to forego.

I have found in the hither parts of Scotland, men, not defective in judgment or general experience, who consider the tacksman as a useless burden of the ground, as a drone who lives upon the product of an estate, without the right of property, or the merit of labour, and who impoverishes at once the landlord and the tenant. The land, say they, is let to the tacksman at sixpence an acre, and by him to the tenant at tenpence. Let the owner be the immediate landlord to all the tenants; if he sets the ground at eightpence, he will increase his revenue by a fourth part, and the tenants' burden will be diminished by a fifth.

Those who pursue this train of reasoning, seem not sufficiently to inquire whither it will lead them, nor to know that it will equally show the propriety of suppressing all wholesale trade, of shutting up the shops of every man who sells what he does not

A JOURNEY TO THE HEBRIDES

make, and of extruding all whose agency and profit intervene between the manufacturer and the consumer. They may, by stretching their understandings a little wider, comprehend, that all those who, by undertaking large quantities of manufacture, and affording employment to many labourers, make themselves considered as benefactors to the publick, have only been robbing their workmen with one hand, and their customers with the other. If Crowley had sold only what he could make, and all his smiths had wrought their own iron with their own hammers, he would have lived on less, and they would have sold their work for more. The salaries of superintendents and clerks would have been partly saved, and partly shared, and nails been sometimes cheaper by a farthing in a hundred. But then if the smith could not have found an immediate purchaser, he must have deserted his anvil; if there had, by accident, at any time, been more sellers than buyers, the workmen must have reduced their profit to nothing, by underselling one another; and, as no great stock could have been in any hand, no sudden demand of large quantities could have been answered, and the builder must have stood still till the nailer could supply him.

According to these schemes, universal plenty is to begin and end in universal misery. Hope and emulation will be utterly extinguished; and as all must obey the call of immediate necessity, nothing that requires extensive views, or provides for distant consequences, will ever be performed.

To the southern inhabitants of Scotland, the state

A JOURNEY TO THE HEBRIDES

of the mountains, and the islands, is equally unknown with that of Borneo or Sumatra; of both they have only heard a little, and guess the rest. They are strangers to the language and the manners, to the advantages and the wants of the people, whose life they would model, and whose evils they would remedy.

Nothing is less difficult, than to procure one convenience by the forfeiture of another. A soldier may expedite his march by throwing away his arms. To banish the tacksman is easy, to make a country plentiful by diminishing the people, is an expeditious mode of husbandry; but that abundance, which there is nobody to enjoy, contributes little to human happiness.

As the mind must govern the hands, so, in every society, the man of intelligence must direct the man of labour. If the tacksman be taken away, the Hebrides must, in their present state, be given up to grossness and ignorance; the tenant, for want of instruction, will be unskilful, and for the want of admonition, will be negligent. The laird, in these wide estates, which often consist of islands remote from one another, cannot extend his personal influence to all his tenants; and the steward having no dignity annexed to his character, can have little authority among men taught to pay reverence only to birth, and who regard the tacksman as their hereditary superiour; nor can the steward have equal zeal for the prosperity of an estate profitable only to the laird, with the tacksman, who has the laird's income involved in his own.

A JOURNEY TO THE HEBRIDES

The only gentlemen in the islands are the lairds, the tacksmen, and the ministers, who frequently improve their livings by becoming farmers. If the tacksmen be banished, who will be left to impart knowledge, or impress civility? The laird must always be at a distance from the greater part of his lands; and if he resides at all upon them, must drag his days in solitude, having no longer either a friend or a companion; he will, therefore, depart to some more comfortable residence, and leave the tenants to the wisdom and mercy of a factor.

Of tenants there are different orders, as they have greater or less stock. Land is sometimes leased to a small fellowship, who live in a cluster of huts, called a Tenant's Town, and are bound jointly and separately for the payment of their rent. These, I believe, employ in the care of their cattle and the labour of tillage, a kind of tenants yet lower; who, having a hut, with grass for a certain number of cows and sheep, pay their rent by a stipulated quantity of labour.

The condition of domestick servants, or the price of occasional labour, I do not know with certainty. I was told that the maids have sheep, and are allowed to spin for their own clothing; perhaps they have no pecuniary wages, or none but in very wealthy families. The state of life, which has hitherto been purely pastoral, begins now to be a little variegated with commerce; but novelties enter by degrees, and till one mode has fully prevailed over the other, no settled notion can be formed.

Such is the system of insular subordination,

BENNET LANGTON

A JOURNEY TO THE HEBRIDES

which, having little variety, cannot afford much delight in the view, nor long detain the mind in contemplation. The inhabitants were for a long time perhaps not unhappy; but their content was a muddy mixture of pride and ignorance, an indifference for pleasures which they did not know, a blind veneration for their chiefs, and a strong conviction of their own importance.

Their pride has been crushed by the heavy hand of a vindictive conqueror, whose severities have been followed by laws, which, though they cannot be called cruel, have produced much discontent, because they operate upon the surface of life, and make every eye bear witness to subjection. To be compelled to a new dress has always been found painful.

Their chiefs, being now deprived of their jurisdiction, have already lost much of their influence; and as they gradually degenerate from patriarchal rulers to rapacious landlords, they will divest themselves of the little that remains.

That dignity which they derived from an opinion of their military importance, the law, which disarmed them, has abated. An old gentleman, delighting himself with the recollection of better days, related, that forty years ago, a chieftain walked out, attended by ten or twelve followers, with their arms rattling. That animating rabble has now ceased. The chief has lost his formidable retinue; and the Highlander walks his heath unarmed and defenceless, with the peaceful submission of a French peasant, or English cottager.

A JOURNEY TO THE HEBRIDES

Their ignorance grows every day less, but their knowledge is yet of little other use than to show them their wants. They are now in the period of education, and feel the uneasiness of discipline, without yet perceiving the benefit of instruction.

The last law, by which the Highlanders are deprived of their arms, has operated with efficacy beyond expectation. Of former statutes made with the same design, the execution had been feeble, and the effect inconsiderable. Concealment was undoubtedly practised, and perhaps often with connivance. There was tenderness or partiality on one side, and obstinacy on the other. But the law, which followed the victory of Culloden, found the whole nation dejected and intimidated; informations were given without danger and without fear, and the arms were collected with such rigour, that every house was despoiled of its defence.

To disarm part of the Highlands, could give no reasonable occasion of complaint. Every government must be allowed the power of taking away the weapon that is lifted against it. But the loyal clans murmured, with some appearance of justice, that, after having defended the king, they were forbidden for the future to defend themselves; and that the sword should be forfeited, which had been legally employed. Their case is undoubtedly hard, but in political regulations good cannot be complete, it can only be predominant.

Whether by disarming a people thus broken into several tribes, and thus remote from the seat of power, more good than evil has been produced,

A JOURNEY TO THE HEBRIDES

may deserve inquiry. The supreme power, in every community, has the right of debarring every individual, and every subordinate society, from self-defence, only because the supreme power is able to defend them; and, therefore, where the governour cannot act, he must trust the subject to act for himself. These islands might be wasted with fire and sword before their sovereign would know their distress. A gang of robbers, such as has been lately found confederating themselves in the Highlands, might lay a wide region under contribution. The crew of a petty privateer might land on the largest and most wealthy of the islands, and riot without control in cruelty and waste. It was observed by one of the chiefs of Sky, that fifty armed men might, without resistance, ravage the country. Laws that place the subjects in such a state, contravene the first principles of the compact of authority: they exact obedience, and yield no protection.

It affords a generous and manly pleasure, to conceive a little nation gathering its fruits and tending its herds with fearless confidence, though it lies open on every side to invasion, where, in contempt of walls and trenches, every man sleeps securely with his sword beside him; where all, on the first approach of hostility, came together at the call to battle, as at a summons to a festal show; and, committing their cattle to the care of those whom age or nature has disabled, engaged the enemy with that competition for hazard and for glory, which operate in men that fight under the eye of those

A JOURNEY TO THE HEBRIDES

whose dislike or kindness they have always considered as the greatest evil or the greatest good.

This was, in the beginning of the present century, the state of the Highlands. Every man was a soldier, who partook of national confidence, and interested himself in national honour. To lose this spirit, is to lose what no small advantage will compensate.

It may, likewise, deserve to be inquired, whether a great nation ought to be totally commercial? whether, amidst the uncertainty of human affairs, too much attention to one mode of happiness, may not endanger others? whether the pride of riches must not sometimes have recourse to the protection of courage? and whether, if it be necessary to preserve in some part of the empire the military spirit, it can subsist more commodiously in any place, than in remote and unprofitable provinces, where it can commonly do little harm, and whence it may be called forth at any sudden exigence?

It must, however, be confessed, that a man who places honour only in successful violence, is a very troublesome and pernicious animal in time of peace; and that the martial character cannot prevail in a whole people, but by the diminution of all other virtues. He that is accustomed to resolve all right into conquest, will have very little tenderness or equity. All the friendship in such a life can be only a confederacy of invasion, or alliance of defence. The strong must flourish by force, and the weak subsist by stratagem.

Till the Highlanders lost their ferocity with their arms, they suffered from each other all that malig-

A JOURNEY TO THE HEBRIDES

nity could dictate, or precipitance could act. Every provocation was revenged with blood, and no man that ventured into a numerous company, by whatever occasion brought together, was sure of returning without a wound. If they are now exposed to foreign hostilities, they may talk of the danger, but can seldom feel it. If they are no longer martial, they are no longer quarrelsome. Misery is caused, for the most part, not by a heavy crush of disaster, but by the corrosion of less visible evils, which canker enjoyment, and undermine security. The visit of an invader is necessarily rare, but domestick animosities allow no cessation.

The abolition of the local jurisdictions, which had for so many ages been exercised by the chiefs, has likewise its evil and its good. The feudal constitution naturally diffused itself into long ramifications of subordinate authority. To this general temper of the government was added the peculiar form of the country, broken by mountains into many subdivisions, scarcely accessible but to the natives, and guarded by passes, or perplexed with intricacies, through which national justice could not find its way.

The power of deciding controversies, and of punishing offences, as some such power there must always be, was entrusted to the lairds of the country, to those whom the people considered as their natural judges. It cannot be supposed that a rugged proprietor of the rocks, unprincipled and unenlightened, was a nice resolver of entangled claims, or very exact in proportioning punishment to offences.

A JOURNEY TO THE HEBRIDES

But the more he indulged his own will, the more he held his vassals in dependance. Prudence and innocence, without the favour of the chief, conferred no security; and crimes involved no danger, when the judge was resolved to acquit.

When the chiefs were men of knowledge and virtue, the convenience of a domestick judicature was great. No long journeys were necessary, nor artificial delays could be practised; the character, the alliances, and interests of the litigants were known to the court, and all false pretences were easily detected. The sentence, when it was past, could not be evaded; the power of the laird superseded formalities, and justice could not be defeated by interest or stratagem.

I doubt not but that since the regular judges have made their circuits through the whole country, right has been every where more wisely and more equally distributed; the complaint is, that litigation is grown troublesome, and that the magistrates are too few, and therefore often too remote for general convenience.

Many of the smaller islands have no legal officer within them. I once asked, if a crime should be committed, by what authority the offender could be seized? and was told, that the laird would exert his right; a right which he must now usurp, but which surely necessity must vindicate, and which is, therefore, yet exercised in lower degrees, by some of the proprietors, when legal processes cannot be obtained.

In all greater questions, however, there is now

A JOURNEY TO THE HEBRIDES

happily an end to all fear or hope from malice or from favour. The roads are secure in those places through which, forty years ago, no traveller could pass without a convoy. All trials of right by the sword are forgotten, and the mean are in as little danger from the powerful as in other places. No scheme of policy has, in any country, yet brought the rich and poor on equal terms into courts of judicature. Perhaps experience, improving on experience, may in time effect it.

Those who have long enjoyed dignity and power, ought not to lose it without some equivalent. There was paid to the chiefs by the publick, in exchange for their privileges, perhaps a sum greater than most of them had ever possessed, which excited a thirst for riches, of which it showed them the use. When the power of birth and station ceases, no hope remains but from the prevalence of money. Power and wealth supply the place of each other. Power confers the ability of gratifying our desire without the consent of others. Wealth enables us to obtain the consent of others to our gratification. Power, simply considered, whatever it confers on one, must take from another. Wealth enables its owner to give to others, by taking only from himself. Power pleases the violent and proud : wealth delights the placid and the timorous. Youth, therefore, flies at power, and age grovels after riches.

The chiefs, divested of their prerogatives, necessarily turned their thoughts to the improvement of their revenues, and expect more rent, as they have less homage. The tenant, who is far from perceiv-

A JOURNEY TO THE HEBRIDES

ing that his condition is made better in the same proportion as that of his landlord is made worse, does not immediately see why his industry is to be taxed more heavily than before. He refuses to pay the demand, and is ejected; the ground is then let to a stranger, who, perhaps, brings a larger stock, but who, taking the land at its full price, treats with the laird upon equal terms, and considers him not as a chief but as a trafficker in land. Thus the estate, perhaps, is improved, but the clan is broken.

It seems to be the general opinion, that the rents have been raised with too much eagerness. Some regard must be paid to prejudice. Those who have hitherto paid but little, will not suddenly be persuaded to pay much, though they can afford it. As ground is gradually improved, and the value of money decreases, the rent may be raised without any diminution of the farmer's profits; yet it is necessary in these countries, where the ejection of a tenant is a greater evil than in more populous places, to consider, not merely what the land will produce, but with what ability the inhabitant can cultivate it. A certain stock can allow but a certain payment; for if the land be doubled, and the stock remains the same, the tenant becomes no richer. The proprietors of the Highlands might, perhaps, often increase their income, by subdividing the farms, and allotting to every occupier only so many acres as he can profitably employ, but that they want people.

There seems now, whatever be the cause, to be through a great part of the Highlands a general

A JOURNEY TO THE HEBRIDES

discontent. That adherence which was lately professed by every man to the chief of his name, has now little prevalence; and he that cannot live as he desires at home, listens to the tale of fortunate islands, and happy regions, where every man may have land of his own, and eat the product of his labour without a superiour.

Those who have obtained grants of American lands, have, as is well known, invited settlers from all quarters of the globe; and among other places, where oppression might produce a wish for new habitations, their emissaries would not fail to try their persuasions in the isles of Scotland, where, at the time when the clans were newly disunited from their chiefs, and exasperated by unprecedented exactions, it is no wonder that they prevailed.

Whether the mischiefs of emigration were immediately perceived, may be justly questioned. They who went first, were probably such as could best be spared; but the accounts sent by the earliest adventurers, whether true or false, inclined many to follow them; and whole neighbourhoods formed parties for removal; so that departure from their native country is no longer exile. He that goes thus accompanied, carries with him all that makes life pleasant. He sits down in a better climate, surrounded by his kindred and his friends: they carry with them their language, their opinions, their popular songs, and hereditary merriment; they change nothing but the place of their abode; and of that change they perceive the benefit.

This is the real effect of emigration, if those that

A JOURNEY TO THE HEBRIDES

go away together, settle on the same spot, and preserve their ancient union. But some relate that these adventurous visitants of unknown regions, after a voyage passed in dreams of plenty and felicity, are dispersed at last upon a sylvan wilderness, where their first years must be spent in toil to clear the ground which is afterwards to be tilled; and that the whole effect of their undertaking is only more fatigue and equal scarcity.

Both accounts may be suspected. Those who are gone will endeavour, by every art, to draw others after them; for as their numbers are greater, they will provide better for themselves. When Nova Scotia was first peopled, I remember a letter, published under the character of a New Planter, who related how much the climate put him in mind of Italy. Such intelligence the Hebridians probably receive from their transmarine correspondents. But with equal temptations of interest, and, perhaps, with no greater niceness of veracity, the owners of the islands spread stories of American hardships, to keep their people content at home.

Some method to stop this epidemick desire of wandering, which spreads its contagion from valley to valley, deserves to be sought with great diligence. In more fruitful countries, the removal of one, only makes room for the succession of another: but in the Hebrides, the loss of an inhabitant leaves a lasting vacuity; for nobody born in any other parts of the world will choose this country for his residence; and an island once depopulated, will remain a desert, as long as the present facility of travel gives every one,

A JOURNEY TO THE HEBRIDES

who is discontented and unsettled, the choice of his abode.

Let it be inquired, whether the first intention of those who are fluttering on the wing, and collecting a flock that they may take their flight, be to attain good, or to avoid evil? If they are dissatisfied with that part of the globe which their birth has allotted them, and resolve not to live without the pleasures of happier climates; if they long for bright suns, and calm skies, and flowery fields, and fragrant gardens, I know not by what eloquence they can be persuaded, or by what offers they can be hired to stay.

But if they are driven from their native country by positive evils, and disgusted by ill-treatment, real or imaginary, it were fit to remove their grievances, and quiet their resentment; since, if they have been hitherto undutiful subjects, they will not much mend their principles by American conversation.

To allure them into the army, it was thought proper to indulge them in the continuance of their national dress. If this concession could have any effect, it might easily be made. That dissimilitude of appearance, which was supposed to keep them distinct from the rest of the nation, might disincline them from coalescing with the Pennsylvanians or people of Connecticut. If the restitution of their arms will reconcile them to their country, let them have again those weapons, which will not be more mischievous at home than in the colonies. That they may not fly from the increase of rent, I know

A JOURNEY TO THE HEBRIDES

not whether the general good does not require that the landlords be, for a time, restrained in their demands, and kept quiet by pensions proportionate to their loss.

To hinder insurrection by driving away the people, and to govern peaceably, by having no subjects, is an expedient that argues no great profundity of politicks. To soften the obdurate, to convince the mistaken, to mollify the resentful, are worthy of a statesman; but it affords a legislator little self-applause to consider, that where there was formerly an insurrection, there is now a wilderness.

It has been a question often agitated, without solution, why those northern regions are now so thinly peopled, which formerly overwhelmed, with their armies, the Roman empire? The question supposes, what I believe is not true, that they had once more inhabitants than they could maintain, and overflowed only because they were full.

This is to estimate the manners of all countries and ages by our own. Migration, while the state of life was unsettled, and there was little communication of intelligence between distant places, was, among the wilder nations of Europe, capricious and casual. An adventurous projector heard of a fertile coast unoccupied, and led out a colony; a chief of renown for bravery, called the young men together, and led them out to try what fortune would present. When Cæsar was in Gaul, he found the Helvetians preparing to go they know not whither, and put a stop to their motions. They settled again in their

A JOURNEY TO THE HEBRIDES

own country, where they were so far from wanting room, that they had accumulated three years' provision for their march.

The religion of the north was military; if they could not find enemies, it was their duty to make them: they travelled in quest of danger, and willingly took the chance of empire or death. If their troops were numerous, the countries from which they were collected are of vast extent, and, without much exuberance of people, great armies may be raised where every man is a soldier. But their true numbers were never known. Those who were conquered by them, are their historians, and shame may have excited them to say, that they were overwhelmed with multitudes. To count is a modern practice, the ancient method was to guess; and when numbers are guessed, they are always magnified.

Thus England has, for several years, been filled with the achievements of seventy thousand Highlanders employed in America. I have heard from an English officer, not much inclined to favour them, that their behaviour deserved a very high degree of military praise; but their number has been much exaggerated. One of the ministers told me, that seventy thousand men could not have been found in all the Highlands, and that more than twelve thousand never took the field. Those that went to the American war, went to destruction. Of the old Highland regiment, consisting of twelve hundred, only seventy-six survived to see their country again.

A JOURNEY TO THE HEBRIDES

The Gothick swarms have at least been multiplied with equal liberality. That they bore no great proportion to the inhabitants in whose countries they settled, is plain from the paucity of northern words now found in the provincial languages. Their country was not deserted for want of room, because it was covered with forests of vast extent; and the first effect of plenitude of inhabitants is the destruction of wood. As the Europeans spread over America, the lands are gradually laid naked.

I would not be understood to say, that necessity had never any part in their expeditions. A nation, whose agriculture is scanty or unskilful, may be driven out by famine. A nation of hunters may have exhausted their game. I only affirm, that the northern regions were not, when their irruptions subdued the Romans, overpeopled with regard to their real extent of territory, and power of fertility. In a country fully inhabited, however afterward laid waste, evident marks will remain of its former populousness. But of Scandinavia and Germany, nothing is known but that, as we trace their state upwards into antiquity, their woods were greater, and their cultivated ground was less.

That causes very different from want of room, may produce a general disposition to seek another country, is apparent from the present conduct of the Highlanders, who are, in some places, ready to threaten a total secession. The numbers which have already gone, though like other numbers they may be magnified, are very great, and such as, if they had gone together and agreed upon any certain set-

A JOURNEY TO THE HEBRIDES

tlement, might have founded an independent government in the depths of the western continent. Nor are they only the lowest and most indigent; many men of considerable wealth have taken with them their train of labourers and dependants; and if they continue the feudal scheme of polity, may establish new clans in the other hemisphere.

That the immediate motives of their desertion must be imputed to their landlords, may be reasonably concluded, because some lairds, of more prudence and less rapacity, have kept their vassals undiminished. From Raasay only one man had been seduced, and at Col there was no wish to go away.

The traveller who comes hither from more opulent countries, to speculate upon the remains of pastoral life, will not much wonder that a common Highlander has no strong adherence to his native soil; for of animal enjoyments, or of physical good, he leaves nothing that he may not find again where-soever he may be thrown.

The habitations of men in the Hebrides may be distinguished into huts and houses. By a house, I mean a building with one story over another; by a hut, a dwelling with only one floor. The laird, who formerly lived in a castle, now lives in a house; sometimes sufficiently neat, but seldom very spacious or splendid. The tacksmen and the ministers have commonly houses. Wherever there is a house, the stranger finds a welcome; and to the other evils of exterminating tacksmen may be added the unavoidable cessation of hospitality, or the devolution of too heavy a burden on the ministers.

A JOURNEY TO THE HEBRIDES

Of the houses little can be said. They are small, and by the necessity of accumulating stores, where there are so few opportunities of purchase, the rooms are very heterogeneously filled. With want of cleanliness it were ingratitude to reproach them. The servants, having been bred upon the naked earth, think every floor clean, and the quick succession of guests, perhaps not always over-elegant, does not allow much time for adjusting their apartments.

Huts are of many gradations; from murky dens to commodious dwellings.

The wall of a common hut is always built without mortar, by a skilful adaptation of loose stones. Sometimes perhaps a double wall of stones is raised, and the intermediate space filled with earth. The air is thus completely excluded. Some walls are, I think, formed of turfs, held together by a wattle, or texture of twigs. Of the meanest huts the first room is lighted by the entrance, and the second by the smoke-hole. The fire is usually made in the middle. But there are huts or dwellings of only one story, inhabited by gentlemen, which have walls cemented with mortar, glass windows, and boarded floors. Of these all have chimneys, and some chimneys have grates.

The house and the furniture are not always nicely suited. We were driven once, by missing a passage, to the hut of a gentleman, where, after a very liberal supper, when I was conducted to my chamber, I found an elegant bed of Indian cotton, spread with fine sheets. The accommodation was flattering; I undressed myself, and felt my feet in the mire.

A JOURNEY TO THE HEBRIDES

The bed stood upon the bare earth, which a long course of rain had softened to a puddle.

In pastoral countries, the condition of the lowest rank of people is sufficiently wretched. Among manufacturers, men that have no property may have art and industry, which make them necessary, and, therefore, valuable. But where flocks and corn are the only wealth, there are always more hands than work, and of that work there is little in which skill and dexterity can be much distinguished. He, therefore, who is born poor never can be rich. The son merely occupies the place of the father, and life knows nothing of progression or advancement.

The petty tenants, and labouring peasants, live in miserable cabins, which afford them little more than shelter from the storms. The boor of Norway is said to make all his own utensils. In the Hebrides, whatever might be their ingenuity, the want of wood leaves them no materials. They are probably content with such accommodations as stones of different forms and sizes can afford them.

Their food is not better than their lodging. They seldom taste the flesh of land-animals; for here are no markets. What each man eats is from his own stock. The great effect of money is to break property into small parts. In towns, he that has a shilling may have a piece of meat; but where there is no commerce, no man can eat mutton but by killing a sheep.

Fish in fair weather they need not want; but, I believe, man never lives long on fish, but by constraint; he will rather feed upon roots and berries.

A JOURNEY TO THE HEBRIDES

The only fuel of the islands is peat. Their wood is all consumed, and coal they have not yet found. Peat is dug out of the marshes, from the depth of one foot to that of six. That is accounted the best which is nearest the surface. It appears to be a mass of black earth held together by vegetable fibres. I know not whether the earth be bituminous, or whether the fibres be not the only combustible part; which, by heating the interposed earth red-hot, make a burning mass. The heat is not very strong or lasting. The ashes are yellowish, and in a large quantity. When they dig peat, they cut it into square pieces, and pile it up to dry beside the house. In some places it has an offensive smell. It is like wood charred for the smith. The common method of making peat fires is by heaping it on the hearth; but it burns well in grates, and in the best houses is so used. The common opinion is, that peat grows again where it has been cut; which, as it seems to be chiefly a vegetable substance, is not unlikely to be true, whether known or not to those who relate it.

There are watermills in Sky and Raasay; but where they are too far distant, the housewives grind their oats with a quern, or handmill, which consists of two stones, about a foot and a half in diameter; the lower is a little convex, to which the concavity of the upper must be fitted. In the middle of the upper stone is a round hole, and on one side is a long handle. The grinder sheds the corn gradually into the hole with one hand, and works the handle round with the other. The corn slides down the convexity

A JOURNEY TO THE HEBRIDES

of the lower stone, and by the motion of the upper is ground in its passage. These stones are found in Lochabar.

The islands afford few pleasures, except to the hardy sportsman, who can tread the moor and climb the mountain. The distance of one family from another, in a country where travelling has so much difficulty, makes frequent intercourse impracticable. Visits last several days, and are commonly paid by water; yet I never saw a boat furnished with benches, or made commodious by any addition to the first fabrick. Conveniencies are not missed where they never were enjoyed.

The solace which the bagpipe can give, they have long enjoyed; but among other changes, which the last revolution introduced, the use of the bagpipe begins to be forgotten. Some of the chief families still entertain a piper, whose office was anciently hereditary. Macrimmon was piper to Macleod, and Rankin to Maclean of Col.

The tunes of the bagpipe are traditional. There has been in Sky, beyond all time of memory, a college of pipers, under the direction of Macrimmon, which is not quite extinct. There was another in Mull, superintended by Rankin, which expired about sixteen years ago. To these colleges, while the pipe retained its honour, the students of musick repaired for education. I have had my dinner exhilarated by the bagpipe, at Armidale, at Dunvegan, and in Col.

The general conversation of the islanders has nothing particular. I did not meet with the inquisitiveness of which I have read, and suspect the judg-

A JOURNEY TO THE HEBRIDES

ment to have been rashly made. A stranger of curiosity comes into a place where a stranger is seldom seen: he importunes the people with questions, of which they cannot guess the motive, and gazes with surprise on things which they, having had them always before their eyes, do not suspect of any thing wonderful. He appears to them like some being of another world, and then thinks it peculiar that they take their turn to inquire whence he comes, and whither he is going.

— The islands were long unfurnished with instruction for youth, and none but the sons of gentlemen could have any literature. There are now parochial schools, to which the lord of every manor pays a certain stipend. Here the children are taught to read; but by the rule of their institution, they teach only English, so that the natives read a language which they may never use or understand. If a parish, which often happens, contains several islands, the school being but in one, cannot assist the rest. This is the state of Col, which, however, is more enlightened than some other places; for the deficiency is supplied by a young gentleman, who, for his own improvement, travels every year on foot over the Highlands to the session at Aberdeen; and at his return, during the vacation, teaches to read and write in his native island.

In Sky there are two grammar-schools, where boarders are taken to be regularly educated. The price of board is from three pounds, to four pounds ten shillings a year, and that of instruction is half a crown a quarter. But the scholars are birds of pas-

A JOURNEY TO THE HEBRIDES

sage, who live at school only in the summer; for in winter, provisions cannot be made for any considerable number in one place. This periodical dispersion impresses strongly the scarcity of these countries.

— Having heard of no boarding school for ladies nearer than Inverness, I suppose their education is generally domestick. The elder daughters of the higher families are sent into the world, and may contribute, by their acquisitions, to the improvement of the rest.

Women must here study to be either pleasing or useful. Their deficiencies are seldom supplied by very liberal fortunes. A hundred pounds is a portion beyond the hope of any but the laird's daughter. They do not indeed often give money with their daughters: the question is, How many cows a young lady will bring her husband. A rich maiden has from ten to forty; but two cows are a decent fortune for one who pretends to no distinction.

The religion of the islands is that of the kirk of Scotland. The gentlemen with whom I conversed are all inclined to the English liturgy; but they are obliged to maintain the established minister, and the country is too poor to afford payment to another, who must live wholly on the contribution of his audience.

They, therefore, all attend the worship of the kirk, as often as a visit from their minister, or the practicability of travelling, gives them opportunity; nor have they any reason to complain of insufficient pastors; for I saw not one in the islands, whom I had reason to think either deficient in learning, or

A JOURNEY TO THE HEBRIDES

irregular in life; but found several with whom I could not converse without wishing, as my respect increased, that they had not been presbyterians.

The ancient rigour of puritanism is now very much relaxed, though all are not yet equally enlightened. I sometimes met with prejudices sufficiently malignant, but they were prejudices of ignorance. The ministers in the islands had attained such knowledge as may justly be admired in men, who have no motive to study, but generous curiosity, or what is still better, desire of usefulness; with such politeness as so narrow a circle of converse could not have supplied, but to minds naturally disposed to elegance.

Reason and truth will prevail at last. The most learned of the Scottish doctors would now gladly admit a form of prayer, if the people would endure it. The zeal or rage of congregations has its different degrees. In some parishes the Lord's prayer is suffered: in others it is still rejected as a form; and he that should make it part of his supplication would be suspected of heretical pravity.

The principle upon which extemporary prayer was originally introduced, is no longer admitted. The minister formerly, in the effusion of his prayer, expected immediate and, perhaps, perceptible inspiration, and, therefore, thought it his duty not to think before what he should say. It is now universally confessed, that men pray as they speak on other occasions, according to the general measure of their abilities and attainments.

Whatever each may think of a form prescribed by

A JOURNEY TO THE HEBRIDES

another, he cannot but believe that he can himself compose by study and meditation a better prayer than will rise in his mind at a sudden call; and if he has any hope of supernatural help, why may he not as well receive it when he writes as when he speaks?

In the variety of mental powers, some must perform extemporary prayer with much imperfection; and in the eagerness and rashness of contradictory opinions, if publick liturgy be left to the private judgment of every minister, the congregation may often be offended or misled.

There is in Scotland, as among ourselves, a restless suspicion of popish machinations, and a clamour of numerous converts to the Romish religion. The report is, I believe, in both parts of the island equally false. The Romish religion is professed only in Egg and Canna, two small islands, into which the reformation never made its way. If any missionaries are busy in the Highlands, their zeal entitles them to respect, even from those who cannot think favourably of their doctrine.

The political tenets of the islanders I was not curious to investigate, and they were not eager to obtrude. Their conversation is decent and inoffensive. They disdain to drink for their principles, and there is no disaffection at their tables. I never heard a health offered by a Highlander that might not have circulated with propriety within the precincts of the king's palace.

Legal government has yet something of novelty to which they cannot perfectly conform. The ancient spirit that appealed only to the sword, is yet

A JOURNEY TO THE HEBRIDES

among them. The tenant of Scalpa, an island belonging to Macdonald, took no care to bring his rent; when the landlord talked of exacting payment, he declared his resolution to keep his ground, and drive all intruders from the island, and continued to feed his cattle, as on his own land, till it became necessary for the sheriff to dislodge him by violence.

The various kinds of superstition which prevailed here, as in all other regions of ignorance, are, by the diligence of the ministers, almost extirpated.

Of *Brownny*, mentioned by Martin, nothing has been heard for many years. Brownny was a sturdy fairy; who, if he was fed, and kindly treated, would, as they said, do a great deal of work. They now pay him no wages, and are content to labour for themselves.

In Troda, within these three-and-thirty years, milk was put every Saturday for *Greogach*, or *the old man with the long beard*. Whether Greogach was courted as kind, or dreaded as terrible, whether they meant, by giving him the milk, to obtain good or avert evil, I was not informed. The minister is now living by whom the practice was abolished.

They have still among them a great number of charms for the cure of different diseases; they are all invocations, perhaps transmitted to them from the times of popery, which increasing knowledge will bring into disuse.

They have opinions, which cannot be ranked

A JOURNEY TO THE HEBRIDES

with superstition, because they regard only natural effects. They expect better crops of grain by sowing their seed in the moon's increase. The moon has great influence in vulgar philosophy. In my memory it was a precept annually given in one of the English almanacks, "to kill hogs when the moon was increasing, and the bacon would prove the better in boiling."

We should have had little claim to the praise of curiosity, if we had not endeavoured with particular attention to examine the question of the *second sight*. Of an opinion received for centuries by a whole nation, and supposed to be confirmed, through its whole descent, by a series of successive facts, it is desirable that the truth should be established, or the fallacy detected.

The *second sight* is an impression made either by the mind upon the eye, or by the eye upon the mind, by which things distant or future are perceived, and seen as if they were present. A man on a journey far from home falls from a horse; another, who is, perhaps, at work about the house, sees him bleeding on the ground, commonly with a landscape of the place where the accident befalls him. Another seer, driving home his cattle, or wandering in idleness, or musing in the sunshine, is suddenly surprised by the appearance of a bridal ceremony, or funeral procession, and counts the mourners or attendants, of whom, if he knows them, he relates the names, if he knows them not, he can describe the dresses. Things distant are seen at

A JOURNEY TO THE HEBRIDES

the instant when they happen. Of things future I know not that there is any rule for determining the time between the sight and the event.

This receptive faculty, for power it cannot be called, is neither voluntary nor constant. The appearances have no dependance upon choice: they cannot be summoned, detained, or recalled. The impression is sudden, and the effect often painful.

By the term *second sight*, seems to be meant a mode of seeing, superadded to that which nature generally bestows. In the Erse it is called *Taisch*; which signifies likewise a spectre, or a vision. I know not, nor is it likely that the Highlanders ever examined, whether by *Taisch*, used for *second sight*, they mean the power of seeing, or the thing seen.

I do not find it to be true, as it is reported, that to the second sight nothing is presented but phantoms of evil. Good seems to have the same proportion in those visionary scenes, as it obtains in real life: almost all remarkable events have evil for their basis; and are either miseries incurred, or miseries escaped. Our sense is so much stronger of what we suffer, than of what we enjoy, that the ideas of pain predominate in almost every mind. What is recollection but a revival of vexations, or history but a record of wars, treasons, and calamities? Death, which is considered as the greatest evil, happens to all. The greatest good, be it what it will, is the lot but of a part.

That they should often see death is to be expected; because death is an event frequent and important. But they see likewise more pleasing incidents. A

A JOURNEY TO THE HEBRIDES

gentleman told me, that when he had once gone far from his own island, one of his labouring servants predicted his return, and described the livery of his attendant, which he had never worn at home; and which had been, without any previous design, occasionally given him.

Our desire of information was keen, and our inquiry frequent. Mr. Boswell's frankness and gaiety made every body communicative; and we heard many tales of these airy shows, with more or less evidence and distinctness.

It is the common talk of the Lowland Scots, that the notion of the second sight, is wearing away with other superstitions; and that its reality is no longer supposed, but by the grossest people. How far its prevalence ever extended, or what ground it has lost, I know not. The islanders of all degrees, whether of rank or understanding, universally admit it, except the ministers, who universally deny it, and are suspected to deny it, in consequence of a system, against conviction. One of them honestly told me, that he came to Sky with a resolution not to believe it.

Strong reasons for incredulity will readily occur. This faculty of seeing things out of sight is local, and commonly useless. It is a breach of the common order of things, without any visible reason or perceptible benefit. It is ascribed only to a people very little enlightened; and among them, for the most part, to the mean and ignorant.

To the confidence of these objections it may be replied, that by presuming to determine what is fit,

A JOURNEY TO THE HEBRIDES

and what is beneficial, they presuppose more knowledge of the universal system than man has attained; and, therefore, depend upon principles too complicated and extensive for our comprehension; and that there can be no security in the consequence, when the premises are not understood; that the second sight is only wonderful because it is rare, for, considered in itself, it involves no more difficulty than dreams, or perhaps, than the regular exercise of the cogitative faculty; that a general opinion of communicative impulses, or visionary representations, has prevailed in all ages and all nations; that particular instances have been given, with such evidence as neither Bacon nor Boyle has been able to resist; that sudden impressions, which the event has verified, have been felt by more than own or publish them; that the second sight of the Hebrides implies only the local frequency of a power which is no where totally unknown; and that where we are unable to decide by antecedent reason, we must be content to yield to the force of testimony.

By pretensions to second sight, no profit was ever sought or gained. It is an involuntary affection, in which neither hope nor fear are known to have any part. Those who profess to feel it do not boast of it as a privilege, nor are considered by others as advantageously distinguished. They have no temptation to feign; and their hearers have no motive to encourage the imposture.

To talk with any of these seers is not easy. There is one living in Sky, with whom we would have gladly conversed; but he was very gross and igno-

A JOURNEY TO THE HEBRIDES

rant, and knew no English. The proportion in these countries of the poor to the rich is such, that if we suppose the quality to be accidental, it can very rarely happen to a man of education; and yet on such men it has sometimes fallen. There is now a second-sighted gentleman in the Highlands, who complains of the terrours to which he is exposed.

The foresight of the seers is not always prescience: they are impressed with images, of which the event only shows them the meaning. They tell what they have seen to others, who are, at that time, not more knowing than themselves, but may become at last very adequate witnesses, by comparing the narrative with its verification.

To collect sufficient testimonies for the satisfaction of the publick, or of ourselves, would have required more time than we could bestow. There is against it, the seeming analogy of things confusedly seen, and little understood; and for it, the indistinct cry of national persuasion, which may be, perhaps, resolved at last into prejudice and tradition. I never could advance my curiosity to conviction; but came away at last only willing to believe.

As there subsists no longer in the islands much of that peculiar and discriminative form of life, of which the idea had delighted our imagination, we were willing to listen to such accounts of past times as would be given us. But we soon found what memorials were to be expected from an illiterate people, whose whole time is a series of distress; where every morning is labouring with expedients for the evening; and where all mental

A JOURNEY TO THE HEBRIDES

pains or pleasure arose from the dread of winter, the expectation of spring, the caprices of their chiefs, and the motions of the neighbouring clans; where there was neither shame from ignorance, nor pride in knowledge; neither curiosity to inquire, nor vanity to communicate.

The chiefs, indeed, were exempt from urgent penury and daily difficulties; and in their houses were preserved what accounts remained of past ages. But the chiefs were sometimes ignorant and careless, and sometimes kept busy by turbulence and contention; and one generation of ignorance effaces the whole series of unwritten history. Books are faithful repositories, which may be awhile neglected or forgotten; but when they are opened again, will again impart their instruction: memory, once interrupted, is not to be recalled. Written learning is a fixed luminary, which, after the cloud that had hidden it has passed away, is again bright in its proper station. Tradition is but a meteor, which, if once it falls, cannot be rekindled.

It seems to be universally supposed, that much of the local history was preserved by the bards, of whom one is said to have been retained by every great family. After these bards were some of my first inquiries; and I received such answers as, for awhile, made me please myself with my increase of knowledge; for I had not then learned how to estimate the narration of a Highlander.

They said that a great family had a *bard* and a *senachi*, who were the poet and historian of the house; and an old gentleman told me that he re-

A JOURNEY TO THE HEBRIDES

membered one of each. Here was a dawn of intelligence. Of men that had lived within memory, some certain knowledge might be attained. Though the office had ceased, its effects might continue; the poems might be found, though there was no poet.

Another conversation, indeed, informed me, that the same man was both bard and senachi. This variation discouraged me; but as the practice might be different in different times, or at the same time in different families, there was yet no reason for supposing that I must necessarily sit down in total ignorance.

Soon after I was told by a gentleman, who is generally acknowledged the greatest master of Hebridian antiquities, that there had, indeed, once been both bards and senachies; and that *senachi* signified *the man of talk*, or of conversation; but that neither bard nor senachi had existed for some centuries. I have no reason to suppose it exactly known at what time the custom ceased, nor did it probably cease in all houses at once. But whenever the practice of recitation was disused, the works, whether poetical or historical, perished with the authors; for in those times nothing had been written in the Erse language.

Whether *the man of talk* was an historian, whose office was to tell truth, or a story-teller, like those which were in the last century, and, perhaps, are now among the Irish, whose trade was only to amuse, it now would be vain to inquire.

Most of the domestick offices were, I believe, hereditary; and probably the laureate of a clan was

A JOURNEY TO THE HEBRIDES

always the son of the last laureate. The history of the race could no otherwise be communicated or retained; but what genius could be expected in a poet by inheritance?

The nation was wholly illiterate. Neither bards nor senachies could write or read; but if they were ignorant, there was no danger of detection; they were believed by those whose vanity they flattered.

The recital of genealogies, which has been considered as very efficacious to the preservation of a true series of ancestry, was anciently made when the heir of the family came to manly age. This practice has never subsisted within time of memory, nor was much credit due to such rehearsers, who might obtrude fictitious pedigrees, either to please their master, or to hide the deficiency of their own memories.

Where the chiefs of the Highlands have found the histories of their descent, is difficult to tell; for no Erse genealogy was ever written. In general this only is evident, that the principal house of a clan must be very ancient, and that those must have lived long in a place, of whom it is not known when they came thither.

Thus hopeless are all attempts to find any traces of Highland learning. Nor are their primitive customs and ancient manner of life otherwise than very faintly and uncertainly remembered by the present race.

The peculiarities which strike the native of a commercial country, proceeded, in a great measure, from the want of money. To the servants and de-

A JOURNEY TO THE HEBRIDES

pendants that were not domesticks, and, if an estimate be made from the capacity of any of their old houses which I have seen, their domesticks could have been but few, were appropriated certain portions of land for their support. Macdonald has a piece of ground yet called the bards' or senachies' field. When a beef was killed for the house, particular parts were claimed as fees by the several officers, or workmen. What was the right of each I have not learned. The head belonged to the smith, and the udder of a cow to the piper; the weaver had likewise his particular part; and so many pieces followed these prescriptive claims, that the laird's was at last but little.

The payment of rent in kind has been so long disused in England, that it is totally forgotten. It was practised very lately in the Hebrides, and probably still continues, not only in St. Kilda, where money is not yet known, but in others of the smaller and remoter islands. It were, perhaps, to be desired, that no change in this particular should have been made. When the laird could only eat the produce of his lands, he was under the necessity of residing upon them; and when the tenant could not convert his stock into more profitable riches, he could never be tempted away from his farm, from the only place where he could be wealthy. Money confounds subordination, by overpowering the distinctions of rank and birth, and weakens authority, by supplying power of resistance, or expedients for escape. The feudal system is formed for a nation employed in agriculture, and has never long

A JOURNEY TO THE HEBRIDES

kept its hold where gold and silver have become common.

Their arms were anciently the *glaymore*, or great two-handed sword, and afterwards the two-edged sword and target, or buckler, which was sustained on the left arm. In the midst of the target, which was made of wood, covered with leather, and studded with nails, a slender lance, about two feet long, was sometimes fixed; it was heavy and cumbrous, and accordingly has for some time past been gradually laid aside. Very few targets were at Culloden. The dirk, or broad dagger, I am afraid, was of more use in private quarrels than in battles. The Lochaber axe is only a slight alteration of the old English bill.

After all that has been said of the force and terror of the Highland sword, I could not find that the art of defence was any part of common education. The gentlemen were, perhaps, sometimes skilful gladiators, but the common men had no other powers than those of violence and courage. Yet it is well known, that the onset of the Highlanders was very formidable. As an army cannot consist of philosophers, a panick is easily excited by any unwonted mode of annoyance. New dangers are naturally magnified; and men accustomed only to exchange bullets at a distance, and rather to hear their enemies than see them, are discouraged and amazed when they find themselves encountered hand to hand, and catch the gleam of steel flashing in their faces.

The Highland weapons gave opportunity for

A JOURNEY TO THE HEBRIDES

many exertions of personal courage, and sometimes for single combats in the field; like those which occur so frequently in fabulous wars. At Falkirk, a gentleman now living, was, I suppose after the retreat of the king's troops, engaged at a distance from the rest with an Irish dragoon. They were both skilful swordsmen, and the contest was not easily decided: the dragoon at last had the advantage, and the Highlander called for quarter; but quarter was refused him, and the fight continued until he was reduced to defend himself upon his knee: at that instant one of the Macleods came to his rescue; who, as it is said, offered quarter to the dragoon, but he thought himself obliged to reject what he had before refused, and, as battle gives little time to deliberate, was immediately killed.

Funerals were formerly solemnized by calling multitudes together, and entertaining them at a great expense. This emulation of useless cost has been for some time discouraged, and at last, in the isle of Sky, is almost suppressed.

→ Of the Erse language, as I understand nothing, I cannot say more than I have been told. It is the rude speech of a barbarous people, who had few thoughts to express, and were content, as they conceived grossly, to be grossly understood. After what has been lately talked of Highland bards, and Highland genius, many will startle when they are told, that the Erse never was a written language; that there is not in the world an Erse manuscript a hundred years old; and that the sounds of the Highlanders were never expressed by letters, till some

A JOURNEY TO THE HEBRIDES

little books of piety were translated, and a metrical version of the Psalms was made by the synod of Argyle. Whoever, therefore, now writes in this language, spells according to his own perception of the sound, and his own idea of the power of the letters. The Welsh and the Irish are cultivated tongues. The Welsh, two hundred years ago, insulted their English neighbours for the instability of their orthography; while the Erse merely floated in the breath of the people, and could, therefore, receive little improvement.

When a language begins to teem with books, it is tending to refinement; as those who undertake to teach others must have undergone some labour in improving themselves, they set a proportionate value on their own thoughts, and wish to enforce them by efficacious expressions; speech becomes embodied and permanent; different modes and phrases are compared, and the best obtains an establishment. By degrees, one age improves upon another. Exactness is first obtained, and afterwards elegance. But diction, merely vocal, is always in its childhood. As no man leaves his eloquence behind him, the new generations have all to learn. There may possibly be books without a polished language, but there can be no polished language without books.

That the bards could not read more than the rest of their countrymen, it is reasonable to suppose; because, if they had read, they could probably have written; and how high their compositions may reasonably be rated, an inquirer may best judge by considering what stores of imagery, what principles

A JOURNEY TO THE HEBRIDES

of ratiocination, what comprehension of knowledge, and what delicacy of elocution he has known any man attain who cannot read. The state of the bards was yet more hopeless. He that cannot read, may now converse with those that can; but the bard was a barbarian among barbarians, who, knowing nothing himself, lived with others that knew no more.

There has lately been in the islands one of these illiterate poets, who, hearing the Bible read at church, is said to have turned the sacred history into verse. I heard part of a dialogue, composed by him, translated by a young lady in Mull, and thought it had more meaning than I expected from a man totally uneducated; but he had some opportunities of knowledge; he lived among learned people. After all that has been done for the instruction of the Highlanders, the antipathy between their language and literature still continues; and no man that has learned only Erse is, at this time, able to read.

The Erse has many dialects, and the words used in some islands are not always known in others. In literate nations, though the pronunciation, and sometimes the words of common speech, may differ, as now in England, compared with the south of Scotland, yet there is a written diction, which pervades all dialects, and is understood in every province. But where the whole language is colloquial, he that has only one part, never gets the rest, as he cannot get it but by change of residence.

In an unwritten speech, nothing that is not very short is transmitted from one generation to an-

A JOURNEY TO THE HEBRIDES

other. Few have opportunities of hearing a long composition often enough to learn it, or have inclination to repeat it so often as is necessary to retain it; and what is once forgotten is lost for ever. I believe there cannot be recovered in the whole Erse language five hundred lines, of which there is any evidence, to prove them a hundred years old. Yet I hear that the father of Ossian boasts of two chests more of ancient poetry, which he suppresses, because they are too good for the English.

— He that goes into the Highlands with a mind naturally acquiescent, and a credulity eager for wonders, may come back with an opinion very different from mine; for the inhabitants, knowing the ignorance of all strangers in their language and antiquities, perhaps are not very scrupulous adherents to truth; yet I do not say that they deliberately speak studied falsehood, or have a settled purpose to deceive. They have inquired and considered little, and do not always feel their own ignorance. They are not much accustomed to be interrogated by others; and seem never to have thought upon interrogating themselves; so that if they do not know what they tell to be true, they likewise do not distinctly perceive it to be false. —

Mr. Boswell was very diligent in his inquiries; and the result of his investigations was, that the answer to the second question was commonly such as nullified the answer to the first.

We were awhile told, that they had an old translation of the scriptures; and told it till it would appear obstinacy to inquire again. Yet, by continued

A JOURNEY TO THE HEBRIDES

accumulation of questions, we found, that the translation meant, if any meaning there were, was nothing else than the Irish Bible.

We heard of manuscripts that were, or that had been in the hands of somebody's father, or grandfather; but at last we had no reason to believe they were other than Irish. Martin mentions Irish, but never any Erse manuscripts, to be found in the islands in his time.

I suppose my opinion of the poems of Ossian is already discovered. I believe they never existed in any other form than that which we have seen. The editor, or author, never could show the original; nor can it be shown by any other. To revenge reasonable incredulity, by refusing evidence, is a degree of insolence, with which the world is not yet acquainted; and stubborn audacity is the last refuge of guilt. It would be easy to show it if he had it; but whence could it be had? It is too long to be remembered, and the language formerly had nothing written. He has doubtless inserted names that circulate in popular stories, and may have translated some wandering ballads, if any can be found; and the names, and some of the images, being recollected, make an inaccurate auditor imagine, by the help of Caledonian bigotry, that he has formerly heard the whole.

I asked a very learned minister in Sky, who had used all arts to make me believe the genuineness of the book, whether at last he believed it himself? but he would not answer. He wished me to be deceived, for the honour of his country; but would not di-

A JOURNEY TO THE HEBRIDES

rectly and formally deceive me. Yet has this man's testimony been publickly produced, as of one that held Fingal to be the work of Ossian.

It is said, that some men of integrity profess to have heard parts of it, but they all heard them when they were boys; and it was never said that any of them could recite six lines. They remember names, and, perhaps, some proverbial sentiments; and, having no distinct ideas, coin a resemblance without an original. The persuasion of the Scots, however, is far from universal; and in a question so capable of proof, why should doubt be suffered to continue? The editor has been heard to say, that part of the poem was received by him, in the Saxon character. He has then found, by some peculiar fortune, an unwritten language, written in a character which the natives probably never beheld.

I have yet supposed no imposture but in the publisher; yet I am far from certainty, that some translations have not been lately made, that may now be obtruded as parts of the original work. Credulity on one part is a strong temptation to deceit on the other, especially to deceit of which no personal injury is the consequence, and which flatters the author with his own ingenuity. The Scots have something to plead for their easy reception of an improbable fiction: they are seduced by their fondness for their supposed ancestors. A Scotchman must be a very sturdy moralist, who does not love Scotland better than truth: he will always love it better than inquiry: and if falsehood flatters his vanity, will not be very diligent to detect it. Neither ought the

A JOURNEY TO THE HEBRIDES

English to be much influenced by Scotch authority; for of the past and present state of the whole Erse nation, the Lowlanders are at least as ignorant as ourselves. To be ignorant is painful; but it is dangerous to quiet our uneasiness by the delusive opiate of hasty persuasion.

But this is the age in which those who could not read, have been supposed to write; in which the giants of antiquated romance have been exhibited as realities. If we know little of the ancient Highlanders, let us not fill the vacuity with Ossian. If we have not searched the Magellanick regions, let us, however, forbear to people them with Patagons.

Having waited some days at Armidel, we were flattered at last with a wind that promised to convey us to Mull. We went on board a boat that was taking in kelp, and left the isle of Sky behind us. We were doomed to experience, like others, the danger of trusting to the wind, which blew against us, in a short time, with such violence, that we, being no seasoned sailors, were willing to call it a tempest. I was sea-sick, and lay down. Mr. Boswell kept the deck. The master knew not well whither to go; and our difficulties might, perhaps, have filled a very pathetick page, had not Mr. Maclean of Col, who, with every other qualification which insular life requires, is a very active and skilful mariner, piloted us safe into his own harbour.

In the morning we found ourselves under the isle of Col, where we landed; and passed the first day and night with captain Maclean, a gentleman who has lived some time in the East Indies, but having

A JOURNEY TO THE HEBRIDES

dethroned no nabob, is not too rich to settle in his own country.

Next day the wind was fair, and we might have had an easy passage to Mull; but having, contrarily to our own intention, landed upon a new island, we would not leave it wholly unexamined. We, therefore, suffered the vessel to depart without us, and trusted the skies for another wind.

Mr. Maclean of Col, having a very numerous family, has, for some time past, resided at Aberdeen, that he may superintend their education, and leaves the young gentleman, our friend, to govern his dominions, with the full power of a Highland chief. By the absence of the laird's family, our entertainment was made more difficult, because the house was, in a great degree, disfurnished; but young Col's kindness and activity supplied all defects, and procured us more than sufficient accommodation.

Here I first mounted a little Highland steed; and if there had been many spectators, should have been somewhat ashamed of my figure in the march. The horses of the islands, as of other barren countries, are very low: they are, indeed, musculous and strong, beyond what their size gives reason for expecting; but a bulky man upon one of their backs makes a very disproportionate appearance.

From the habitation of captain Maclean we went to Grissipol, but called by the way on Mr. Hector Maclean, the minister of Col, whom we found in a hut, that is, a house of only one floor, but with windows and chimney, and not inelegantly fur-

A JOURNEY TO THE HEBRIDES

nished. Mr. Maclean has the reputation of great learning: he is seventy-seven years old, but not infirm, with a look of venerable dignity, excelling what I remember in any other man.

His conversation was not unsuitable to his appearance. I lost some of his good will, by treating a heretical writer with more regard than, in his opinion, a heretick could deserve. I honoured his orthodoxy, and did not much censure his asperity. A man who has settled his opinions, does not love to have the tranquillity of his conviction disturbed; and at seventy-seven it is time to be in earnest.

Mention was made of the Erse translation of the New Testament, which has been lately published, and of which the learned Mr. Macqueen of Sky spoke with commendation; but Mr. Maclean said, he did not use it, because he could make the text more intelligible to his auditors by an extemporary version. From this I inferred, that the language of the translation was not the language of the isle of Col.

He has no publick edifice for the exercise of his ministry; and can officiate to no greater number than a room can contain; and the room of a hut is not very large. This is all the opportunity of worship that is now granted to the inhabitants of the islands, some of whom must travel thither, perhaps, ten miles. Two chapels were erected by their ancestors, of which I saw the skeletons, which now stand faithful witnesses of the triumph of reformation.

The want of churches is not the only impediment to piety; there is likewise a want of ministers. A

A JOURNEY TO THE HEBRIDES

parish often contains more islands than one; and each island can have the minister only in its own turn. At Raasay they had, I think, a right to service only every third Sunday. All the provision made by the present ecclesiastical constitution, for the inhabitants of about a hundred square miles, is a prayer and sermon in a little room, once in three weeks: and even this parsimonious distribution is at the mercy of the weather: and in those islands where the minister does not reside, it is impossible to tell how many weeks or months may pass, without any publick exercise of religion.

After a short conversation with Mr. Maclean, we went on to Grissipol, a house and farm tenanted by Mr. Macsweyn, where I saw more of the ancient life of a Highlander than I had yet found. Mrs. Macsweyn could speak no English, and had never seen any other places than the islands of Sky, Mull, and Col: but she was hospitable and good-humoured, and spread her table with sufficient liberality. We found tea here, as in every other place, but our spoons were of horn.

The house of Grissipol stands by a brook very clear, and which is, I suppose, one of the most copious streams in the island. This place was the scene of an action, much celebrated in the traditional history of Col, but which probably no two relaters will tell alike.

Some time, in the obscure ages, Macneil of Barra married the lady Maclean, who had the isle of Col for her jointure. Whether Macneil detained Col, when the widow was dead, or whether she lived so

A JOURNEY TO THE HEBRIDES

long as to make her heirs impatient, is perhaps not now known. The younger son, called John Gerves or John the Giant, a man of great strength, who was then in Ireland, either for safety or for education, dreamed of recovering his inheritance; and getting some adventurers together, which in those unsettled times was not hard to do, invaded Col. He was driven away, but was not discouraged, and collecting new followers, in three years came again with fifty men. In his way he stopped at Artorinish in Morvern, where his uncle was prisoner to Macleod, and was then with his enemies in a tent. Maclean took with him only one servant, whom he ordered to stay at the outside; and where he should see the tent press outwards, to strike with his dirk; it being the intention of Maclean, as any man provoked him, to lay hands upon him, and push him back. He entered the tent alone, with his Lochabar axe in his hand, and struck such terrour into the whole assembly, that they dismissed his uncle.

When he landed at Col, he saw the sentinel, who kept watch towards the sea, running on to Grissipol, to give Macneil, who was there with a hundred and twenty men, an account of the invasion. He told Macgill, one of his followers, that if he intercepted that dangerous intelligence, by catching the courier, he would give him certain lands in Mull. Upon this promise, Macgill pursued the messenger, and either killed or stopped him; and his posterity, till very lately, held the lands in Mull.

The alarm being thus prevented, he came unexpectedly upon Macneil. Chiefs were in those days

A JOURNEY TO THE HEBRIDES

never wholly unprovided for an enemy. A fight ensued, in which one of their followers is said to have given an extraordinary proof of activity, by bounding backwards over the brook of Grissipol. Macneil being killed, and many of his clan destroyed, Maclean took possession of the island, which the Macneils attempted to conquer by another invasion, but were defeated and repulsed.

Maclean, in his turn, invaded the estate of the Macneils, took the castle of Brecacig, and conquered the isle of Barra, which he held for seven years, and then restored it to the heirs.

From Grissipol Mr. Maclean conducted us to his father's seat; a neat new house erected near the old castle, I think, by the last proprietor. Here we were allowed to take our station, and lived very commodiously while we waited for moderate weather and a fair wind, which we did not so soon obtain, but we had time to get some information of the present state of Col, partly by inquiry, and partly by occasional excursions.

Col is computed to be thirteen miles in length, and three in breadth. Both the ends are the property of the duke of Argyle, but the middle belongs to Maclean, who is called Col, as the only laird.

Col is not properly rocky; it is rather one continued rock, of a surface much diversified with protuberances, and covered with a thin layer of earth, which is often broken, and discovers the stone. Such a soil is not for plants that strike deep roots; and perhaps in the whole island nothing has ever yet grown to the height of a table. The uncultivated

A JOURNEY TO THE HEBRIDES

parts are clothed with heath, among which industry has interspersed spots of grass and corn; but no attempt has been made to raise a tree. Young Col, who has a very laudable desire of improving his patrimony, purposes some time to plant an orchard; which, if it be sheltered by a wall, may perhaps succeed. He has introduced the culture of turnips, of which he has a field, where the whole work was performed by his own hand. His intention is to provide food for his cattle in the winter. This innovation was considered by Mr. Macsweyn as the idle project of a young head, heated with English fancies; but he has now found that turnips will really grow, and that hungry sheep and cows will really eat them.

By such acquisitions as these, the Hebrides may in time rise above their annual distress. Wherever heath will grow, there is reason to think something better may draw nourishment; and by trying the production of other places, plants will be found suitable to every soil.

Col has many lochs, some of which have trouts and eels, and others have never yet been stocked; another proof of the negligence of the islanders, who might take fish in the inland waters, when they cannot go to sea.

Their quadrupeds are horses, cows, sheep, and goats. They have neither deer, hares, nor rabbits. They have no vermin except rats, which have been lately brought thither by sea, as to other places; and are free from serpents, frogs, and toads.

The harvest in Col, and in Lewis, is ripe sooner

A JOURNEY TO THE HEBRIDES

than in Sky, and the winter in Col is never cold, but very tempestuous. I know not that I ever heard the wind so loud in any other place; and Mr. Boswell observed that its noise was all its own, for there were no trees to increase it.

Noise is not the worst effect of the tempests; for they have thrown the sand from the shore over a considerable part of the land, and it is said still to encroach and destroy more and more pasture; but I am not of opinion, that by any surveys or landmarks, its limits have been ever fixed, or its progression ascertained. If one man has confidence enough to say, that it advances, nobody can bring any proof to support him in denying it. The reason why it is not spread to a greater extent, seems to be, that the wind and rain come almost together, and that it is made close and heavy by the wet before the storms can put it in motion. So thick is the bed, and so small the particles, that if a traveller should be caught by a sudden gust in dry weather, he would find it very difficult to escape with life.

For natural curiosities I was shown only two great masses of stone, which lie loose upon the ground; one on the top of a hill, and the other at a small distance from the bottom. They certainly were never put into their present places by human strength or skill; and though an earthquake might have broken off the lower stone, and rolled it into the valley, no account can be given of the other, which lies on the hill, unless, which I forgot to examine, there be still near it some higher rock, from which it might be torn. All nations have a tradition,

A JOURNEY TO THE HEBRIDES

that their earliest ancestors were giants, and these stones are said to have been thrown up and down by a giant and his mistress. There are so many important things of which human knowledge can give no account, that it may be forgiven us, if we speculate no longer on two stones in Col.

This island is very populous. About nine-and-twenty years ago, the fencible men of Col were reckoned one hundred and forty; which is the sixth of eight hundred and forty; and probably some contrived to be left out of the list. The minister told us, that a few years ago the inhabitants were eight hundred, between the ages of seven and of seventy. Round numbers are seldom exact. But in this case the authority is good, and the error likely to be little. If to the eight hundred be added what the laws of computation require, they will be increased to at least a thousand; and if the dimensions of the country have been accurately related, every mile maintains more than twenty-five.

This proportion of habitation is greater than the appearance of the country seems to admit: for wherever the eye wanders, it sees much waste and little cultivation. I am more inclined to extend the land, of which no measure has ever been taken, than to diminish the people, who have been really numbered. Let it be supposed, that a computed mile contains a mile and a half, as was commonly found true in the mensuration of the English roads, and we shall then allot nearly twelve to a mile, which agrees much better with ocular observation.

A JOURNEY TO THE HEBRIDES

Here, as in Sky, and other islands, are the laird, the tacksmen, and the under-tenants.

Mr. Maclean, the laird, has very extensive possessions, being proprietor, not only of far the greater part of Col, but of the extensive island of Rum, and a very considerable territory in Mull.

Rum is one of the larger islands, almost square, and therefore of great capacity in proportion to its sides. By the usual method of estimating computed extent, it may contain more than a hundred and twenty square miles.

It originally belonged to Clanronald, and was purchased by Col; who, in some dispute about the bargain, made Clanronald prisoner, and kept him nine months in confinement. Its owner represents it as mountainous, rugged, and barren. In the hills there are red deer. The horses are very small, but of a breed eminent for beauty. Col, not long ago, bought one of them from a tenant; who told him, that as he was of a shape uncommonly elegant, he could not sell him but at a high price; and that whoever had him should pay a guinea and a half.

There are said to be in Barra a race of horses yet smaller, of which the highest is not above thirty-six inches.

The rent of Rum is not great. Mr. Maclean declared that he should be very rich, if he could set his land at two-pence halfpenny an acre. The inhabitants are fifty-eight families, who continued papists for some time after the laird became a protestant. Their adherence to their old religion was strengthened by the countenance of the laird's sister, a

A JOURNEY TO THE HEBRIDES

zealous Romanist, till one Sunday, as they were going to mass under the conduct of their patroness, Maclean met them on the way, gave one of them a blow on the head with a *yellow stick*, I suppose a cane, for which the Erse had no name, and drove them to the kirk, from which they have never since departed. Since the use of this method of conversion, the inhabitants of Egg and Canna, who continue papists, call the protestantism of Rum, the religion of the *yellow stick*.

The only popish islands are Egg and Canna. Egg is the principal island of a parish, in which, though he has no congregation, the protestant minister resides. I have heard of nothing curious in it, but the cave in which a former generation of the islanders were smothered by Macleod.

If we had travelled with more leisure, it had not been fit to have neglected the popish islands. Popery is favourable to ceremony; and, among ignorant nations, ceremony is the only preservative of tradition. Since protestantism was extended to the savage parts of Scotland, it has, perhaps, been one of the chief labours of the ministers to abolish stated observances, because they continued the remembrance of the former religion. We, therefore, who came to hear old traditions, and see antiquated manners, should, probably, have found them amongst the papists.

Canna, the other popish island, belongs to Clanronald. It is said not to comprise more than twelve miles of land, and yet maintains as many inhabitants as Rum.

A JOURNEY TO THE HEBRIDES

We were at Col under the protection of the young laird, without any of the distresses which Mr. Pennant, in a fit of simple credulity, seems to think almost worthy of an elegy by Ossian. Wherever we roved, we were pleased to see the reverence with which his subjects regarded him. He did not endeavour to dazzle them by any magnificence of dress; his only distinction was a feather in his bonnet; but as soon as he appeared, they forsook their work and clustered about him: he took them by the hand, and they seemed mutually delighted. He has the proper disposition of a chieftain, and seems desirous to continue the customs of his house. The bagpiper played regularly, when dinner was served, whose person and dress made a good appearance; and he brought no disgrace upon the family of Rankin, which has long supplied the lairds of Col with hereditary musick.

The tacksmen of Col seem to live with less dignity and convenience than those of Sky; where they had good houses, and tables, not only plentiful, but delicate. In Col only two houses pay the window tax; for only two have six windows, which, I suppose, are the laird's and Mr. Macsweyn's.

The rents have, till within seven years, been paid in kind, but the tenants finding that cattle and corn varied in their price, desired for the future, to give their landlord money; which, not having yet arrived at the philosophy of commerce, they consider as being every year of the same value.

We were told of a particular mode of under-tenure. The tacksmen admits some of his inferiour

A JOURNEY TO THE HEBRIDES

neighbours to the cultivation of his grounds, on condition that, performing all the work, and giving a third part of the seed, they shall keep a certain number of cows, sheep, and goats, and reap a third part of the harvest. Thus by less than the tillage of two acres they pay the rent of one.

There are tenants below the rank of tacksman, that have got smaller tenants under them; for in every place, where money is not the general equivalent, there must be some whose labour is immediately paid by daily food.

A country that has no money, is by no means convenient for beggars, both because such countries are commonly poor, and because charity requires some trouble and some thought. A penny is easily given upon the first impulse of compassion, or impatience of importunity; but few will deliberately search their cupboards or their granaries to find out something to give. A penny is likewise easily spent; but victuals, if they are unprepared, require house-room, and fire, and utensils, which the beggar knows not where to find.

Yet beggars there sometimes are, who wander from island to island. We had, in our passage to Mull, the company of a woman and her child, who had exhausted the charity of Col. The arrival of a beggar on an island is accounted a sinistrous event. Every body considers that he shall have the less for what he gives away. Their alms, I believe, is generally oatmeal.

Near to Col is another island called Tireye, eminent for its fertility. Though it has but half the ex-

A JOURNEY TO THE HEBRIDES

tent of Rum, it is so well peopled, that there have appeared, not long ago, nine hundred and fourteen at a funeral. The plenty of this island enticed beggars to it, who seemed so burdensome to the inhabitants, that a formal compact was drawn up, by which they obliged themselves to grant no more relief to casual wanderers, because they had among them an indigent woman of high birth, whom they considered as entitled to all that they could spare. I have read the stipulation, which was indited with juridical formality, but was never made valid by regular subscription.

If the inhabitants of Col have nothing to give, it is not that they are oppressed by their landlord: their leases seem to be very profitable. One farmer, who pays only seven pounds a year, has maintained seven daughters and three sons, of whom the eldest is educated at Aberdeen for the ministry; and now, at every vacation, opens a school in Col.

Life is here, in some respects, improved beyond the condition of some other islands. In Sky, what is wanted can only be bought, as the arrival of some wandering pedler may afford an opportunity; but in Col there is a standing shop, and in Mull there are two. A shop in the islands, as in other places of little frequentation, is a repository of every thing requisite for common use. Mr. Boswell's journal was filled, and he bought some paper in Col. To a man that ranges the streets of London, where he is tempted to contrive wants for the pleasure of supplying them, a shop affords no image worthy of attention; but in an island it turns the balance of

A JOURNEY TO THE HEBRIDES

existence between good and evil. To live in perpetual want of little things, is a state not, indeed, of torture, but of constant vexation. I have in Sky had some difficulty to find ink for a letter; and if a woman breaks her needle, the work is at a stop.

As it is, the islanders are obliged to content themselves with succedaneous means for many common purposes. I have seen the chief man of a very wide district riding with a halter for a bridle, and governing his hobby with a wooden curb.

The people of Col, however, do not want dexterity to supply some of their necessities. Several arts which make trades, and demand apprenticeships in great cities, are here the practices of daily economy. In every house candles are made, both moulded and dipped. Their wicks are small shreds of linen cloth. They all know how to extract from the cuddy oil for their lamps. They all tan skins, and make brogues.

As we travelled through Sky, we saw many cottages, but they very frequently stood single on the naked ground. In Col, where the hills opened a place convenient for habitation, we found a petty village, of which every hut had a little garden adjoining; thus they made an appearance of social commerce and mutual offices, and of some attention to convenience and future supply. There is not in the Western Islands any collection of buildings that can make pretensions to be called a town, except in the isle of Lewis, which I have not seen.

If Lewis is distinguished by a town, Col has also something peculiar. The young laird has attempted what no islander perhaps ever thought on. He has

A JOURNEY TO THE HEBRIDES

begun a road capable of a wheel-carriage. He has carried it about a mile, and will continue it by annual elongation from his house to the harbour.

Of taxes here is no reason for complaining; they are paid by a very easy composition. The malt-tax for Col is twenty shillings. Whisky is very plentiful; there are several stills in the island, and more is made than the inhabitants consume.

The great business of insular policy is now to keep the people in their own country. As the world has been let in upon them, they have heard of happier climates and less arbitrary government; and if they are disgusted, have emissaries among them ready to offer them land and houses, as a reward for deserting their chief and clan. Many have departed both from the main of Scotland, and from the islands; and all that go may be considered as subjects lost to the British crown; for a nation scattered in the boundless regions of America resembles rays diverging from a focus. All the rays remain, but the heat is gone. Their power consisted in their concentration: when they are dispersed, they have no effect.

It may be thought that they are happier by the change; but they are not happy as a nation, for they are a nation no longer. As they contribute not to the prosperity of any community, they must want that security, that dignity, that happiness, whatever it be, which a prosperous community throws back upon individuals.

The inhabitants of Col have not yet learned to be weary of their heath and rocks, but attend their

A JOURNEY TO THE HEBRIDES

agriculture and their dairies, without listening to American seducements.

There are some, however, who think that this emigration has raised terror disproportionate to its real evil; and that it is only a new mode of doing what was always done. The Highlands, they say, never maintained their natural inhabitants; but the people, when they found themselves too numerous, instead of extending cultivation, provided for themselves by a more compendious method, and sought better fortune in other countries. They did not, indeed, go away in collective bodies, but withdrew invisibly, a few at a time; but the whole number of fugitives was not less, and the difference between other times and this, is only the same as between evaporation and effusion.

This is plausible, but I am afraid it is not true. Those who went before, if they were not sensibly missed, as the argument supposes, must have gone either in less number, or in a manner less detrimental, than at present; because formerly there was no complaint. Those who then left the country were generally the idle dependants on overburdened families, or men who had no property; and, therefore, carried away only themselves. In the present eagerness of emigration, families, and almost communities, go away together. Those who were considered as prosperous and wealthy sell their stock, and carry away the money. Once none went away but the useless and poor; in some parts there is now reason to fear, that none will stay but those

A JOURNEY TO THE HEBRIDES

who are too poor to remove themselves, and too useless to be removed at the cost of others.

Of antiquity there is not more knowledge in Col than in other places; but every where something may be gleaned.

How ladies were portioned, when there was no money, it would be difficult for an Englishman to guess. In 1649, Maclean of Dronart in Mull married his sister Fingala to Maclean of Col, with a hundred and eighty kine; and stipulated, that if she became a widow, her jointure should be three hundred and sixty. I suppose some proportionate tract of land was appropriated to their pasturage.

The disposition to pompous and expensive funerals, which has, at one time or other, prevailed in most parts of the civilized world, is not yet suppressed in the islands, though some of the ancient solemnities are worn away, and singers are no longer hired to attend the procession. Nineteen years ago, at the burial of the laird of Col, were killed thirty cows, and about fifty sheep. The number of the cows is positively told, and we must suppose other victuals in like proportion.

Mr. Maclean informed us of an old game, of which he did not tell the original, but which may, perhaps, be used in other places, where the reason of it is not yet forgot. At new-year's eve, in the hall or castle of the laird, where, at festal seasons, there may be supposed a very numerous company, one man dresses himself in a cow's hide, upon which other men beat with sticks. He runs with all this noise around the house, which all the company

A JOURNEY TO THE HEBRIDES

quits in a counterfeited fright; the door is then shut. At new-year's eve there is no great pleasure to be had out of doors in the Hebrides. They are sure soon to recover from their terrour enough to solicit for readmission; which, for the honour of poetry, is not to be obtained but by repeating a verse, with which those that are knowing and provident take care to be furnished.

Very near the house of Maclean stands the castle of Col, which was the mansion of the laird, till the house was built. It is built upon a rock, as Mr. Boswell remarked, that it might not be mined. It is very strong, and having been not long uninhabited, is yet in repair. On the wall was, not long ago, a stone with an inscription, importing, that if any man of the clan of Maclonich shall appear before this castle, though he come at midnight, with a man's head in his hand, he shall there find safety and protection against all but the king.

This is an old Highland treaty, made upon a very memorable occasion. Maclean, the son of John Gerves, who recovered Col, and conquered Barra, had obtained, it is said, from James the second, a grant of the lands of Lochiel, forfeited, I suppose, by some offence against the state.

Forfeited estates were not in those days quietly resigned; Maclean, therefore, went with an armed force to seize his new possessions, and, I know not for what reason, took his wife with him. The Camerons rose in defence of their chief, and a battle was fought at Loch Ness, near the place where Fort Augustus now stands, in which Lochiel obtained

A JOURNEY TO THE HEBRIDES

the victory, and Maclean, with his followers, was defeated and destroyed.

The lady fell into the hands of the conquerors, and being found pregnant, was placed in the custody of Maclonich, one of a tribe or family branched from Cameron, with orders, if she brought a boy, to destroy him, if a girl, to spare her.

Maclonich's wife, who was with child likewise, had a girl about the same time at which lady Maclean brought a boy; and Maclonich, with more generosity to his captive, than fidelity to his trust, contrived that the children should be changed.

Maclean being thus preserved from death, in time recovered his original patrimony; and in gratitude to his friend, made his castle a place of refuge to any of the clan that should think himself in danger; and as a proof of reciprocal confidence, Maclean took upon himself and his posterity the care of educating the heir of Maclonich.

This story, like all other traditions of the Highlands, is variously related; but though some circumstances are uncertain, the principal fact is true. Maclean undoubtedly owed his preservation to Maclonich; for the treaty between the two families has been strictly observed: it did not sink into disuse and oblivion, but continued in its full force, while the chieftains retained their power. I have read a demand of protection, made not more than thirty-seven years ago, for one of the Maclonichs, named Ewen Cameron, who had been accessory to the death of Macmartin, and had been banished by Lochiel, his lord, for a certain term; at the expi-

A JOURNEY TO THE HEBRIDES

ration of which he returned married from France; but the Macmartins, not satisfied with the punishment, when he attempted to settle, still threatened him with vengeance. He, therefore, asked, and obtained, shelter in the isle of Col.

The power of protection subsists no longer; but what the law permits is yet continued, and Maclean of Col now educates the heir of Maclonich.

There still remains in the islands, though it is passing fast away, the custom of fosterage. A laird, a man of wealth and eminence, sends his child, either male or female, to a tacksman, or tenant, to be fostered. It is not always his own tenant, but some distant friend, that obtains this honour; for an honour such a trust is very reasonably thought. The terms of fosterage seem to vary in different islands. In Mull, the father sends with his child a certain number of cows, to which the same number is added by the fosterer. The father appropriates a proportionable extent of ground, without rent, for their pasturage. If every cow brings a calf, half belongs to the fosterer, and half to the child; but if there be only one calf between two cows, it is the child's, and when the child returns to the parents, it is accompanied by all the cows given, both by the father and by the fosterer, with half of the increase of the stock by propagation. These beasts are considered as a portion, and called *Macalvie* cattle, of which the father has the produce, but is supposed not to have the full property, but to owe the same number to the child, as a portion to the daughter, or a stock for the son.

A JOURNEY TO THE HEBRIDES

Children continue with the fosterer, perhaps six years, and cannot, where this is the practice, be considered as burdensome. The fosterer, if he gives four cows, receives likewise four, and has, while the child continues with him, grass for eight without rent, with half the calves, and all the milk, for which he pays only four cows when he dismisses his *dalt*, for that is the name for a fostered child.

Fosterage is, I believe, sometimes performed upon more liberal terms. Our friend, the young laird of Col, was fostered by Macsweyn of Grissipol. Macsweyn then lived a tenant to sir James Macdonald in the isle of Sky; and, therefore, Col, whether he sent him cattle or not, could grant him no land. The *dalt*, however, at his return, brought back a considerable number of *Macalvie* cattle, and of the friendship so formed there have been good effects. When Macdonald raised his rents, Macsweyn was, like other tenants, discontented, and, resigning his farm, removed from Sky to Col, and was established at Grissipol.

These observations we made by favour of the contrary wind that drove us to Col, an island not often visited; for there is not much to amuse curiosity, or to attract avarice.

The ground has been hitherto, I believe, used chiefly for pasturage. In a district, such as the eye can command, there is a general herdsman, who knows all the cattle of the neighbourhood, and whose station is upon a hill from which he surveys the lower grounds; and if one man's cattle invade another's grass, drives them back to their own bor-

A JOURNEY TO THE HEBRIDES

ders. But other means of profit begin to be found; kelp is gathered and burnt, and sloops are loaded with the concreted ashes. Cultivation is likely to be improved by the skill and encouragement of the present heir, and the inhabitants of those obscure valleys will partake of the general progress of life.

The rents of the parts which belong to the duke of Argyle, have been raised from fifty-five to one hundred and five pounds, whether from the land or the sea I cannot tell. The bounties of the sea have lately been so great, that a farm in Southuist has risen in ten years from a rent of thirty pounds to one hundred and eighty.

He who lives in Col, and finds himself condemned to solitary meals, and incommunicable reflection, will find the usefulness of that middle order of tacks-men, which some, who applaud their own wisdom, are wishing to destroy. Without intelligence, man is not social, he is only gregarious; and little intelligence will there be, where all are constrained to daily labour, and every mind must wait upon the hand.

After having listened for some days to the tempest, and wandered about the island till our curiosity was satisfied, we began to think about our departure. To leave Col in October was not very easy. We, however, found a sloop which lay on the coast to carry kelp; and for a price which we thought levied upon our necessities, the master agreed to carry us to Mull, whence we might readily pass back to Scotland.

As we were to catch the first favourable breath,

A JOURNEY TO THE HEBRIDES

we spent the night not very elegantly nor pleasantly in the vessel, and were landed next day at Tobor Morar, a port in Mull, which appears, to an unexperienced eye, formed for the security of ships; for its mouth is closed by a small island, which admits them through narrow channels into a basin sufficiently capacious. They are, indeed, safe from the sea, but there is a hollow between the mountains, through which the wind issues from the land with very mischievous violence.

There was no danger while we were there, and we found several other vessels at anchor; so that the port had a very commercial appearance.

The young laird of Col, who had determined not to let us lose his company, while there was any difficulty remaining, came over with us. His influence soon appeared; for he procured us horses, and conducted us to the house of doctor Maclean, where we found very kind entertainment and very pleasing conversation. Miss Maclean, who was born, and had been bred at Glasgow, having removed with her father to Mull, added to other qualifications, a great knowledge of the Erse language, which she had not learned in her childhood, but gained by study, and was the only interpreter of Erse poetry that I could ever find.

The isle of Mull is, perhaps, in extent the third of the Hebrides. It is not broken by waters, nor shot into promontories, but is a solid and compact mass, of breadth nearly equal to its length. Of the dimensions of the larger islands, there is no knowledge ap-

A JOURNEY TO THE HEBRIDES

proaching to exactness. I am willing to estimate it as containing about three hundred square miles.

Mull had suffered, like Sky, by the black winter of seventy-one, in which, contrary to all experience, a continued frost detained the snow eight weeks upon the ground. Against a calamity never known, no provision had been made, and the people could only pine in helpless misery. One tenant was mentioned, whose cattle perished to the value of three hundred pounds; a loss which probably more than the life of man is necessary to repair. In countries like these, the descriptions of famine become intelligible. Where, by vigorous and artful cultivation of a soil naturally fertile, there is commonly a superfluous growth both of grain and grass; where the fields are crowded with cattle; and where every hand is able to attract wealth from a distance, by making something that promotes ease, or gratifies vanity, a dear year produces only a comparative want, which is rather seen than felt, and which terminates commonly in no worse effect, than that of condemning the lower orders of the community to sacrifice a little luxury to convenience, or at most a little convenience to necessity.

But where the climate is unkind, and the ground penurious, so that the most fruitful years produce only enough to maintain themselves; where life unimproved, and unadorned, fades into something little more than naked existence, and every one is busy for himself, without any arts by which the pleasure of others may be increased; if to the daily burden of distress any additional weight be added,

A JOURNEY TO THE HEBRIDES

nothing remains but to despair and die. In Mull the disappointment of a harvest, or a murrain among the cattle, cuts off the regular provision; and they who have no manufactures can purchase no part of the superfluities of other countries. The consequence of a bad season is here not scarcity, but emptiness; and they whose plenty was barely a supply of natural and present need, when that slender stock fails, must perish with hunger.

All travel has its advantages. If the passenger visits better countries, he may learn to improve his own; and if fortune carries him to worse, he may learn to enjoy it.

Mr. Boswell's curiosity strongly impelled him to survey Iona, or Icolmkill, which was, to the early ages, the great school of theology, and is supposed to have been the place of sepulture for the ancient kings. I, though less eager, did not oppose him.

That we might perform this expedition, it was necessary to traverse a great part of Mull. We passed a day at Dr. Maclean's, and could have been well contented to stay longer. But Col provided us horses, and we pursued our journey. This was a day of inconvenience, for the country is very rough, and my horse was but little. We travelled many hours through a tract, black and barren, in which, however, there were the relicks of humanity; for we found a ruined chapel in our way.

It is natural, in traversing this gloom of desolation, to inquire, whether something may not be done to give nature a more cheerful face; and whether those hills and moors that afford heath, cannot, with a

A JOURNEY TO THE HEBRIDES

little care and labour, bear something better? The first thought that occurs is to cover them with trees, for that in many of these naked regions trees will grow, is evident, because stumps and roots are yet remaining; and the speculatist hastily proceeds to censure that negligence and laziness that has omitted, for so long a time, so easy an improvement.

To drop seeds into the ground, and attend their growth, requires little labour and no skill. He who remembers that all the woods, by which the wants of man have been supplied from the deluge till now, were self-sown, will not easily be persuaded to think all the art and preparation necessary, which the Georgick writers prescribe to planters. Trees certainly have covered the earth with very little culture. They wave their tops among the rocks of Norway, and might thrive as well in the Highlands and Hebrides.

But there is a frightful interval between the seed and timber. He that calculates the growth of trees, has the unwelcome remembrance of the shortness of life driven hard upon him. He knows that he is doing what will never benefit himself; and when he rejoices to see the stem rise, is disposed to repine that another shall cut it down.

Plantation is naturally the employment of a mind unburdened with care, and vacant to futurity, saturated with present good, and at leisure to derive gratification from the prospect of posterity. He that pines with hunger, is in little care how others shall be fed. The poor man is seldom studious to make his grandson rich. It may be soon discovered, why

A JOURNEY TO THE HEBRIDES

in a place, which hardly supplies the cravings of necessity, there has been little attention to the delights of fancy, and why distant convenience is unregarded, where the thoughts are turned with incessant solicitude upon every possibility of immediate advantage.

Neither is it quite so easy to raise large woods as may be conceived. Trees intended to produce timber must be sown where they are to grow; and ground sown with trees must be kept useless for a long time, enclosed at an expense from which many will be discouraged by the remoteness of the profit, and watched with that attention, which, in places where it is most needed, will neither be given nor bought. That it cannot be ploughed is evident: and if cattle be allowed to graze upon it, they will devour the plants as fast as they rise. Even in coarser countries, where herds and flocks are not fed, not only the deer and the wild goats will browse upon them, but the hare and rabbit will nibble them. It is, therefore, reasonable to believe, what I do not remember any naturalist to have remarked, that there was a time when the world was very thinly inhabited by beasts, as well as men, and that the woods had leisure to rise high before animals had bred numbers sufficient to intercept them.

Sir James Macdonald, in part of the wastes of his territory, set or sowed trees, to the number, as I have been told, of several millions, expecting, doubtless, that they would grow up into future navies and cities; but for want of enclosure, and of that care which is always necessary, and will hardly ever

A JOURNEY TO THE HEBRIDES

be taken, all his cost and labour have been lost, and the ground is likely to continue an useless heath.

Having not any experience of a journey in Mull, we had no doubt of reaching the sea by daylight, and, therefore, had not left Dr. Maclean's very early. We travelled diligently enough, but found the country, for road there was none, very difficult to pass. We were always struggling with some obstruction or other, and our vexation was not balanced by any gratification of the eye or mind. We were now long enough acquainted with hills and heath to have lost the emotion that they once raised, whether pleasing or painful, and had our mind employed only on our own fatigue. We were, however, sure, under Col's protection, of escaping all real evils. There was no house in Mull to which he could not introduce us. He had intended to lodge us, for that night, with a gentleman that lived upon the coast, but discovered on the way, that he then lay in bed without hope of life.

We resolved not to embarrass a family, in a time of so much sorrow, if any other expedient could be found; and as the island of Ulva was over-against us, it was determined that we should pass the strait, and have recourse to the laird, who, like the other gentlemen of the islands, was known to Col. We expected to find a ferry-boat, but when at last we came to the water, the boat was gone.

We were now again at a stop. It was the sixteenth of October, a time when it is not convenient to sleep in the Hebrides without a cover, and there

A JOURNEY TO THE HEBRIDES

was no house within our reach, but that which we had already declined.

While we stood deliberating, we were happily espied from an Irish ship, that lay at anchor in the strait. The master saw that we wanted a passage, and with great civility sent us his boat, which quickly conveyed us to Ulva, where we were very liberally entertained by Mr. Macquarry.

To Ulva we came in the dark, and left it before noon the next day. A very exact description, therefore, will not be expected. We were told, that it is an island of no great extent, rough and barren, inhabited by the Macquarrys; a clan not powerful nor numerous, but of antiquity, which most other families are content to reverence. The name is supposed to be a depravation of some other; for the Erse language does not afford it any etymology. Macquarry is proprietor both of Ulva and some adjacent islands, among which is Staffa, so lately raised to renown by Mr. Banks.

When the islanders were reproached with their ignorance, or insensibility of the wonders of Staffa, they had not much to reply. They had, indeed, considered it little, because they had always seen it; and none but philosophers, nor they always, are struck with wonder, otherwise than by novelty. How would it surprise an unenlightened ploughman, to hear a company of sober men, inquiring by what power the hand tosses a stone, or why the stone, when it is tossed, falls to the ground!

Of the ancestors of Macquarry, who thus lies

A JOURNEY TO THE HEBRIDES

hid in his unfrequented island, I have found memorials in all places where they could be expected.

Inquiring after the relicks of former manners, I found that in Ulva, and, I think, no where else, is continued the payment of the *mercheta mulierum*; a fine, in old times, due to the laird at the marriage of a virgin. The original of this claim, as of our tenure of *borough English*, is variously delivered. It is pleasant to find ancient customs in old families. This payment, like others, was, for want of money, made anciently in the produce of the land. Macquarry was used to demand a sheep, for which he now takes a crown, by that inattention to the uncertain proportion between the value and the denomination of money, which has brought much disorder into Europe. A sheep has always the same power of supplying human wants, but a crown will bring at one time more, at another less.

Ulva was not neglected by the piety of ancient times: it has still to show what was once a church.

In the morning we went again into the boat, and were landed on Inch Kenneth, an island about a mile long, and perhaps half a mile broad, remarkable for pleasantness and fertility. It is verdant and grassy, and fit both for pasture and tillage; but it has no trees. Its only inhabitants were sir Allan Maclean, and two young ladies, his daughters, with their servants.

Romance does not often exhibit a scene that strikes the imagination more than this little desert in these depths of western obscurity, occupied not by a gross herdsman, or amphibious fisherman, but

A JOURNEY TO THE HEBRIDES

by a gentleman and two ladies, of high birth, polished manners, and elegant conversation, who, in a habitation raised not very far above the ground, but furnished with unexpected neatness and convenience, practised all the kindness of hospitality, and refinement of courtesy.

Sir Allan is the chieftain of the great clan of Maclean, which is said to claim the second place among the Highland families, yielding only to Macdonald. Though, by the misconduct of his ancestors, most of the extensive territory, which would have descended to him, has been alienated, he still retains much of the dignity and authority of his birth. When soldiers were lately wanting for the American war, application was made to sir Allan, and he nominated a hundred men for the service, who obeyed the summons, and bore arms under his command.

He had then, for some time, resided with the young ladies in Inch Kenneth, where he lives, not only with plenty, but with elegance, having conveyed to his cottage a collection of books, and what else is necessary to make his hours pleasant.

When we landed, we were met by sir Allan and the ladies, accompanied by Miss Macquarry, who had passed some time with them, and now returned to Ulva with her father.

We all walked together to the mansion, where we found one cottage for sir Allan, and, I think, two more for the domesticks and the offices. We entered, and wanted little that palaces afford. Our room was neatly floored, and well lighted; and our

A JOURNEY TO THE HEBRIDES

dinner, which was dressed in one of the other huts, was plentiful and delicate.

In the afternoon sir Allan reminded us, that the day was Sunday, which he never suffered to pass without some religious distinction, and invited us to partake in his acts of domestick worship; which I hope neither Mr. Boswell nor myself will be suspected of a disposition to refuse. The elder of the ladies read the English service.

Inch Kenneth was once a seminary of ecclesiastics, subordinate, I suppose, to Icolmkill. Sir Allan had a mind to trace the foundations of the college, but neither I nor Mr. Boswell, who bends a keener eye on vacancy, were able to perceive them.

Our attention, however, was sufficiently engaged by a venerable chapel, which stands yet entire, except that the roof is gone. It is about sixty feet in length, and thirty in breadth. On one side of the altar is a bas-relief of the blessed virgin, and by it lies a little bell; which, though cracked, and without a clapper, has remained there for ages, guarded only by the venerableness of the place. The ground round the chapel is covered with grave-stones of chiefs and ladies; and still continues to be a place of sepulture.

Inch Kenneth is a proper prelude to Icolmkill. It was not without some mournful emotion that we contemplated the ruins of religious structures, and the monuments of the dead.

On the next day we took a more distinct view of the place, and went with the boat to see oysters in the bed, out of which the boatmen forced up as

A JOURNEY TO THE HEBRIDES

many as were wanted. Even Inch Kenneth has a subordinate island, named Sandiland, I suppose, in contempt, where we landed, and found a rock, with a surface of perhaps four acres, of which one is naked stone, another spread with sand and shells, some of which I picked up for their glossy beauty, and two covered with a little earth and grass, on which sir Allan has a few sheep. I doubt not but when there was a college at Inch Kenneth, there was a hermitage upon Sandiland.

Having wandered over these extensive plains, we committed ourselves again to the winds and waters; and after a voyage of about ten minutes, in which we met with nothing very observable, were again safe upon dry ground.

We told sir Allan our desire of visiting Icolmkill, and entreated him to give us his protection, and his company. He thought proper to hesitate a little; but the ladies hinted, that as they knew he would not finally refuse, he would do better if he preserved the grace of ready compliance. He took their advice, and promised to carry us on the morrow in his boat.

We passed the remaining part of the day in such amusements as were in our power. Sir Allan related the American campaign, and at evening one of the ladies played on her harpsichord, while Col and Mr. Boswell danced a Scottish reel with the other.

We could have been easily persuaded to a longer stay upon Inch Kenneth, but life will not be all passed in delight. The session at Edinburgh was

A JOURNEY TO THE HEBRIDES

approaching, from which Mr. Boswell could not be absent.

In the morning our boat was ready; it was high and strong. Sir Allan victualled it for the day, and provided able rowers. We now parted from the young laird of Col, who had treated us with so much kindness, and concluded his favours by consigning us to sir Allan. Here we had the last embrace of this amiable man, who, while these pages were preparing to attest his virtues, perished in the passage between Ulva and Inch Kenneth.

Sir Allan, to whom the whole region was well known, told us of a very remarkable cave, to which he would show us the way. We had been disappointed already by one cave, and were not much elevated by the expectation of another.

It was yet better to see it, and we stopped at some rocks on the coast of Mull. The mouth is fortified by vast fragments of stone, over which we made our way, neither very nimbly, nor very securely. The place, however, well repaid our trouble. The bottom, as far as the flood rushes in, was encumbered with large pebbles, but as we advanced was spread over with smooth sand. The breadth is about forty-five feet; the roof rises in an arch, almost regular, to a height which we could not measure; but I think it about thirty feet.

This part of our curiosity was nearly frustrated; for though we went to see a cave, and knew that caves are dark, we forgot to carry tapers, and did not discover our omission till we were awakened by our wants. Sir Allan then sent one of the boatmen into

A JOURNEY TO THE HEBRIDES

the country, who soon returned with one little candle. We were thus enabled to go forward, but could not venture far. Having passed inward from the sea to a great depth, we found on the right hand a narrow passage, perhaps not more than six feet wide, obstructed by great stones, over which we climbed, and came into a second cave, in breadth twenty-five feet. The air in this apartment was very warm, but not oppressive, nor loaded with vapours. Our light showed no tokens of a feculent or corrupted atmosphere. Here was a square stone, called, as we are told, *Fingal's table*.

If we had been provided with torches, we should have proceeded in our search, though we had already gone as far as any former adventurer, except some who are reported never to have returned; and measuring our way back, we found it more than a hundred and sixty yards, the eleventh part of a mile.

Our measures were not critically exact, having been made with a walking pole, such as it is convenient to carry in these rocky countries, of which I guessed the length by standing against it. In this there could be no great error, nor do I much doubt but the Highlander, whom we employed, reported the number right. More nicety, however, is better, and no man should travel unprovided with instruments for taking heights and distances.

There is yet another cause of error not always easily surmounted, though more dangerous to the veracity of itinerary narratives, than imperfect mensuration. An observer deeply impressed by any remarkable spectacle, does not suppose that the traces

A JOURNEY TO THE HEBRIDES

will soon vanish from his mind, and having commonly no great convenience for writing, defers the description to a time of more leisure and better accommodation.

He who has not made the experiment, or who is not accustomed to require rigorous accuracy from himself, will scarcely believe how much a few hours take from certainty of knowledge, and distinctness of imagery; how the succession of objects will be broken, how separate parts will be confused, and how many particular features and discriminations will be compressed and conglobated into one gross and general idea.

To this dilatory notation must be imputed the false relations of travellers, where there is no imaginable motive to deceive. They trusted to memory, what cannot be trusted safely but to the eye, and told by guess what a few hours before they had known with certainty. Thus it was that Wheeler and Spon described with irreconcilable contrariety things which they surveyed together, and which both undoubtedly designed to show as they saw them.

When we had satisfied our curiosity in the cave, so far as our penury of light permitted us, we clambered again to our boats, and proceeded along the coast of Mull to a headland, called Atun, remarkable for the columnar form of the rocks, which rise in a series of pilasters, with a degree of regularity, which sir Allan thinks not less worthy of curiosity, than the shore of Staffa.

Not long after we came to another range of black

A JOURNEY TO THE HEBRIDES

rocks, which had the appearance of broken pilasters, set one behind another to a great depth. This place was chosen by sir Allan for our dinner. We were easily accommodated with seats, for the stones were of all heights, and refreshed ourselves and our boatmen, who could have no other rest till we were at Icolmkill.

The evening was now approaching, and we were yet at a considerable distance from the end of our expedition. We could, therefore, stop no more to make remarks in the way, but set forward with some degree of eagerness. The day soon failed us, and the moon presented a very solemn and pleasing scene. The sky was clear, so that the eye commanded a wide circle: the sea was neither still nor turbulent; the wind neither silent nor loud. We were never far from one coast or another, on which, if the weather had become violent, we could have found shelter, and, therefore, contemplated at ease the region through which we glided in the tranquillity of the night, and saw now a rock, and now an island, grow gradually conspicuous, and gradually obscure. I committed the fault which I have just been censuring, in neglecting, as we passed, to note the series of this placid navigation.

We were very near an island, called Nun's Island, perhaps from an ancient convent. Here is said to have been dug the stone which was used in the buildings of Icolmkill. Whether it is now inhabited, we could not stay to inquire.

At last we came to Icolmkill, but found no convenience for landing. Our boat could not be forced

A JOURNEY TO THE HEBRIDES

very near the dry ground, and our Highlanders carried us over the water.

We were now treading that illustrious island, which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge, and the blessings of religion. To abstract the mind from all local emotion would be impossible, if it were endeavoured, and would be foolish, if it were possible. Whatever withdraws us from the power of our senses; whatever makes the past, the distant, or the future, predominate over the present, advances us in the dignity of thinking beings. Far from me, and from my friends, be such frigid philosophy, as may conduct us indifferent and unmoved over any ground which has been dignified by wisdom, bravery, or virtue. That man is little to be envied, whose patriotism would not gain force upon the plain of Marathon, or whose piety would not grow warmer among the ruins of Iona.

We came too late to visit monuments; some care was necessary for ourselves. Whatever was in the island, sir Allan could demand, for the inhabitants were Macleans; but having little, they could not give us much. He went to the headman of the island, whom fame, but fame delights in amplifying, represents as worth no less than fifty pounds. He was, perhaps, proud enough of his guests, but ill prepared for our entertainment; however, he soon produced more provision than men not luxurious require. Our lodging was next to be provided. We

A JOURNEY TO THE HEBRIDES

found a barn well stocked with hay, and made our beds as soft as we could.

In the morning we rose and surveyed the place. The churches of the two convents are both standing, though unroofed. They were built of unhewn stone, but solid, and not inelegant. I brought away rude measures of the buildings, such as I cannot much trust myself, inaccurately taken, and obscurely noted. Mr. Pennant's delineations, which are doubtless exact, have made my unskilful description less necessary.

The episcopal church consists of two parts, separated by the belfry, and built at different times. The original church had, like others, the altar at one end, and the tower at the other; but as it grew too small, another building of equal dimension was added, and the tower then was necessarily in the middle.

That these edifices are of different ages seems evident. The arch of the first church is Roman, being part of a circle; that of the additional building is pointed, and therefore Gothick or Saracenic; the tower is firm, and wants only to be floored and covered.

Of the chambers or cells belonging to the monks, there are some walls remaining, but nothing approaching to a complete apartment.

The bottom of the church is so encumbered with mud and rubbish, that we could make no discoveries of curious inscriptions, and what there are have been already published. The place is said to be known where the black stones lie concealed, on

A JOURNEY TO THE HEBRIDES

which the old Highland chiefs, when they made contracts and alliances, used to take the oath, which was considered as more sacred than any other obligation, and which could not be violated without the blackest infamy. In those days of violence and rapine, it was of great importance to impress upon savage minds the sanctity of an oath, by some particular and extraordinary circumstances. They would not have recourse to the black stones, upon small or common occasions, and when they had established their faith by this tremendous sanction, inconstancy and treachery were no longer feared.

The chapel of the nunnery is now used by the inhabitants as a kind of general cowhouse, and the bottom is consequently too miry for examination. Some of the stones which covered the later abbesses have inscriptions, which might yet be read, if the chapel were cleansed. The roof of this, as of all the other buildings, is totally destroyed, not only because timber quickly decays when it is neglected, but because in an island utterly destitute of wood, it was wanted for use, and was consequently the first plunder of needy rapacity.

The chancel of the nuns' chapel is covered with an arch of stone, to which time has done no injury; and a small apartment communicating with the choir, on the north side, like the chapter-house in cathedrals, roofed with stone in the same manner, is likewise entire.

In one of the churches was a marble altar, which the superstition of the inhabitants has destroyed. Their opinion was, that a fragment of this stone was

A JOURNEY TO THE HEBRIDES

a defence against shipwrecks, fire, and miscarriages. In one corner of the church the basin for holy water is yet unbroken.

The cemetery of the nunnery was, till very lately, regarded with such reverence, that only women were buried in it. These relicks of veneration always produce some mournful pleasure. I could have forgiven a great injury more easily than the violation of this imaginary sanctity.

South of the chapel stand the walls of a large room, which was probably the hall, or refectory of the nunnery. This apartment is capable of repair. Of the rest of the convent there are only fragments.

Besides the two principal churches, there are, I think, five chapels yet standing, and three more remembered. There are also crosses, of which two bear the names of St. John and St. Matthew.

A large space of ground about these consecrated edifices is covered with grave-stones, few of which have any inscription. He that surveys it, attended by an insular antiquary, may be told where the kings of many nations are buried, and if he loves to sooth his imagination with the thoughts that naturally rise in places where the great and the powerful lie mingled with the dust, let him listen in submissive silence; for if he asks any questions, his delight is at an end.

Iona has long enjoyed, without any very credible attestation, the honour of being reputed the cemetery of the Scottish kings. It is not unlikely, that, when the opinion of local sanctity was prevalent, the chieftains of the isles, and, perhaps, some of the

A JOURNEY TO THE HEBRIDES

Norwegian or Irish princes, were repositied in this venerable enclosure. But by whom the subterraneous vaults are peopled, is now utterly unknown. The graves are very numerous, and some of them undoubtedly contain the remains of men, who did not expect to be so soon forgotten.

Not far from this awful ground may be traced the garden of the monastery: the fishponds are yet discernible, and the aqueduct, which supplied them, is still in use.

There remains a broken building, which is called the Bishop's house, I know not by what authority. It was once the residence of some man above the common rank, for it has two stories and a chimney. We were shown a chimney at the other end, which was only a niche, without perforation; but so much does antiquarian credulity, or patriotick vanity prevail, that it was not much more safe to trust the eye of our instructor than the memory.

There is in the island one house more, and only one, that has a chimney; we entered it, and found it neither wanting repair nor inhabitants; but to the farmers, who now possess it, the chimney is of no great value; for their fire was made on the floor, in the middle of the room, and notwithstanding the dignity of their mansion, they rejoiced, like their neighbours, in the comforts of smoke.

It is observed, that ecclesiastical colleges are always in the most pleasant and fruitful places. While the world allowed the monks their choice, it is surely no dishonour that they chose well. This island is remarkably fruitful. The village near the

A JOURNEY TO THE HEBRIDES

churches is said to contain seventy families, which, at five in a family, is more than a hundred inhabitants to a mile. There are perhaps other villages; yet both corn and cattle are annually exported.

But the fruitfulness of Iona is now its whole prosperity. The inhabitants are remarkably gross, and remarkably neglected: I know not if they are visited by any minister. The island, which was once the metropolis of learning and piety, has now no school for education, nor temple for worship, only two inhabitants that can speak English, and not one that can write or read.

The people are of the clan of Maclean; and though sir Allan had not been in the place for many years, he was received with all the reverence due to their chieftain. One of them, being sharply reprehended by him, for not sending him some rum, declared after his departure, in Mr. Boswell's presence, that he had no design of disappointing him, "for," said he, "I would cut my bones for him; and if he had sent his dog for it, he should have had it."

When we were to depart, our boat was left by the ebb at a great distance from the water, but no sooner did we wish it afloat, than the islanders gathered round it, and, by the union of many hands, pushed it down the beach; every man who could contribute his help seemed to think himself happy in the opportunity of being, for a moment, useful to his chief.

We now left those illustrious ruins, by which Mr. Boswell was much affected, nor would I willingly

A JOURNEY TO THE HEBRIDES

be thought to have looked upon them without some emotion. Perhaps, in the revolutions of the world, Iona may be sometime again the instructress of the western regions.

It was no long voyage to Mull, where, under sir Allan's protection, we landed in the evening, and were entertained for the night by Mr. Maclean, a minister that lives upon the coast, whose elegance of conversation, and strength of judgment, would make him conspicuous in places of greater celebrity. Next day we dined with Dr. Maclean, another physician, and then travelled on to the house of a very powerful laird, Maclean of Lochbuy; for in this country every man's name is Maclean.

Where races are thus numerous, and thus combined, none but the chief of a clan is addressed by his name. The laird of Dunvegan is called Macleod, but other gentlemen of the same family are denominated by the places where they reside, as Raasay, or Talisker. The distinction of the meaner people is made by their christain names. In consequence of this practice, the laird of Macfarlane, an eminent genealogist, considered himself as disrespectfully treated, if the common addition was applied to him. "Mr. Macfarlane," said he, "may with equal propriety be said to many; but I, and I only, am Macfarlane."

Our afternoon journey was through a country of such gloomy desolation, that Mr. Boswell thought no part of the Highlands equally terrifick, yet we came without any difficulty, at evening, to Lochbuy, where we found a true Highland laird, rough and

A JOURNEY TO THE HEBRIDES

haughty, and tenacious of his dignity: who, hearing my name, inquired whether I was of the Johnstons of Glencoe, or of Ardnamurchan.

Lochbuy has, like the other insular chieftains, quitted the castle that sheltered his ancestors, and lives near it, in a mansion not very spacious or splendid. I have seen no houses in the islands much to be envied for convenience or magnificence, yet they bear testimony to the progress of arts and civility, as they show that rapine and surprise are no longer dreaded, and are much more commodious than the ancient fortresses.

The castles of the Hebrides, many of which are standing, and many ruined, were always built upon points of land, on the margin of the sea. For the choice of this situation there must have been some general reason, which the change of manners has left in obscurity. They were of no use in the days of piracy, as defences of the coast; for it was equally accessible in other places. Had they been seamarks or lighthouses, they would have been of more use to the invader than the natives, who could want no such directions on their own waters: for a watch-tower, a cottage on a hill would have been better, as it would have commanded a wider view.

If they be considered merely as places of retreat, the situation seems not well chosen; for the laird of an island is safest from foreign enemies in the centre: on the coast he might be more suddenly surprised than in the inland parts; and the invaders, if their enterprise miscarried, might more easily retreat. Some convenience, however, whatever it was, their

A JOURNEY TO THE HEBRIDES

position on the shore afforded; for uniformity of practice seldom continues long without good reason.

A castle in the islands is only a single tower of three or four stories, of which the walls are sometimes eight or nine feet thick, with narrow windows, and close winding stairs of stone. The top rises in a cone, or pyramid of stone, encompassed by battlements. The intermediate floors are sometimes frames of timber, as in common houses, and sometimes arches of stone, or alternately stone and timber; so that there was very little danger from fire. In the centre of every floor, from top to bottom, is the chief room, of no great extent, round which there are narrow cavities, or recesses formed by small vacuities, or by a double wall. I know not whether there be ever more than one fireplace. They had no capacity to contain many people, or much provision; but their enemies could seldom stay to blockade them; for if they failed in their first attack, their next care was to escape.

The walls were always too strong to be shaken by such desultory hostilities; the windows were too narrow to be entered, and the battlements too high to be scaled. The only danger was at the gates, over which the wall was built with a square cavity not unlike a chimney, continued to the top. Through this hollow the defendants let fall stones upon those who attempted to break the gate, and poured down water, perhaps scalding water, if the attack was made with fire. The castle of Lochbuy was secured by double doors, of which the outer was an iron grate.

In every castle is a well and a dungeon. The use

A JOURNEY TO THE HEBRIDES

of the well is evident. The dungeon is a deep subterraneous cavity, walled on the sides, and arched on the top, into which the descent is through a narrow door, by a ladder or a rope, so that it seems impossible to escape when the rope or ladder is drawn up. The dungeon was, I suppose, in war, a prison for such captives as were treated with severity; and in peace, for such delinquents as had committed crimes within the laird's jurisdiction; for the mansions of many lairds were, till the late privation of their privileges, the halls of justice to their own tenants.

As these fortifications were the productions of mere necessity, they are built only for safety, with little regard to convenience, and with none to elegance or pleasure. It was sufficient for a laird of the Hebrides, if he had a strong house, in which he could hide his wife and children from the next clan. That they are not large nor splendid is no wonder. It is not easy to find how they were raised, such as they are, by men who had no money, in countries where the labourers and artificers could scarcely be fed. The buildings in different parts of the islands show their degrees of wealth and power. I believe that for all the castles which I have seen beyond the Tweed, the ruins yet remaining of some one of those which the English built in Wales, would supply materials.

These castles afford another evidence that the fictions of romantick chivalry had for their basis the real manners of the feudal times, when every lord of a seignory lived in his hold, lawless and unac-

A JOURNEY TO THE HEBRIDES

countable, with all the licentiousness and insolence of uncontested superiority and unprincipled power. The traveller, whoever he might be, coming to the fortified habitation of a chieftain, would, probably, have been interrogated from the battlements, admitted with caution at the gate, introduced to a petty monarch, fierce with habitual hostility, and vigilant with ignorant suspicion; who, according to his general temper, or accidental humour, would have seated a stranger as his guest at the table, or as a spy confined him in the dungeon.

Lochbuy means the yellow lake, which is the name given to an inlet of the sea, upon which the castle of Mr. Maclean stands. The reason of the appellation we did not learn.

We were now to leave the Hebrides, where we had spent some weeks with sufficient amusement, and where we had amplified our thoughts with new scenes of nature, and new modes of life. More time would have given us a more distinct view, but it was necessary that Mr. Boswell should return, before the courts of justice were opened; and it was not proper to live too long upon hospitality, however liberally imparted.

Of these islands it must be confessed, that they have not many allurements, but to the mere lover of naked nature. The inhabitants are thin, provisions are scarce, and desolation and penury give little pleasure.

The people collectively considered are not few, though their numbers are small in proportion to the space which they occupy. Mull is said to contain six

A JOURNEY TO THE HEBRIDES

thousand, and Sky fifteen thousand. Of the computation respecting Mull, I can give no account; but when I doubted the truth of the numbers attributed to Sky, one of the ministers exhibited such facts as conquered my incredulity.

Of the proportion which the product of any region bears to the people, an estimate is commonly made according to the pecuniary price of the necessaries of life; a principle of judgment which is never certain, because it supposes, what is far from truth, that the value of money is always the same, and so measures an unknown quantity by an uncertain standard. It is competent enough when the markets of the same country, at different times, and those times not too distant, are to be compared; but of very little use for the purpose of making one nation acquainted with the state of another. Provisions, though plentiful, are sold in places of great pecuniary opulence for nominal prices, to which, however scarce, where gold and silver are yet scarcer, they can never be raised.

In the Western Islands, there is so little internal commerce, that hardly any thing has a known or settled rate. The price of things brought in, or carried out, is to be considered as that of a foreign market; and even this there is some difficulty in discovering, because their denominations of quantity are different from ours; and when there is ignorance on both sides, no appeal can be made to a common measure.

This, however, is not the only impediment. The Scots, with a vigilance of jealousy which never goes

A JOURNEY TO THE HEBRIDES

to sleep, always suspect that an Englishman despises them for their poverty, and to convince him that they are not less rich than their neighbours, are sure to tell him a price higher than the true. When Lesley, two hundred years ago, related so punctiliously, that a hundred hen eggs, new laid, were sold in the islands for a penny, he supposed that no inference could possibly follow, but that eggs were in great abundance. Posterity has since grown wiser; and having learned, that nominal and real value may differ, they now tell no such stories, lest the foreigner should happen to collect, not that eggs are many, but that pence are few.

Money and wealth have, by the use of commercial language, been so long confounded, that they are commonly supposed to be the same; and this prejudice has spread so widely in Scotland, that I know not whether I found man or woman, whom I interrogated concerning payments of money, that could surmount the illiberal desire of deceiving me, by representing every thing as dearer than it is.

From Lochbuy we rode a very few miles to the side of Mull, which faces Scotland, where, having taken leave of our kind protector, sir Allan, we embarked in a boat, in which the seat provided for our accommodation was a heap of rough brushwood; and on the twenty-second of October reposed at a tolerable inn on the mainland.

On the next day we began our journey southwards. The weather was tempestuous. For half the day the ground was rough, and our horses were still small. Had they required much restraint, we might

A JOURNEY TO THE HEBRIDES

have been reduced to difficulties; for, I think, we had amongst us but one bridle. We fed the poor animals liberally, and they performed their journey well. In the latter part of the day we came to a firm and smooth road, made by the soldiers, on which we travelled with great security, busied with contemplating the scene about us. The night came on while we had yet a great part of the way to go, though not so dark but that we could discern the cataracts which poured down the hills on one side, and fell into one general channel, that ran with great violence on the other. The wind was loud, the rain was heavy, and the whistling of the blast, the fall of the shower, the rush of the cataracts, and the roar of the torrent, made a nobler chorus of the rough musick of nature than it had ever been my chance to hear before. The streams, which ran across the way from the hills to the main current, were so frequent, that after a while I began to count them; and, in ten miles, reckoned fifty-five, probably missing some, and having let some pass before they forced themselves upon my notice. At last we came to Inverary, where we found an inn, not only commodious, but magnificent.

The difficulties of peregrination were now at an end. Mr. Boswell had the honour of being known to the duke Argyle, by whom we were very kindly entertained at his splendid seat, and supplied with conveniencies for surveying his spacious park and rising forests.

After two days' stay at Inverary we proceeded southward over Glencroe, a black and dreary region,

A JOURNEY TO THE HEBRIDES

now made easily passable by a military road, which rises from either end of the glen by an acclivity not dangerously steep, but sufficiently laborious. In the middle, at the top of the hill, is a seat with this inscription, "Rest and be thankful." Stones were placed to mark the distances, which the inhabitants have taken away, resolved, they said, "to have no new miles."

In this rainy season the hills streamed with waterfalls, which, crossing the way, formed currents on the other side, that ran in contrary directions as they fell to the north or south of the summit. Being, by the favour of the duke, well mounted, I went up and down the hill with great convenience.

From Glencroe we passed through a pleasant country to the banks of Loch Lomond, and were received at the house of sir James Colquhoun, who is owner of almost all the thirty islands of the loch, which we went in a boat next morning to survey. The heaviness of the rain shortened our voyage, but we landed on one island planted with yew, and stocked with deer, and on another containing, perhaps, nor more than half an acre, remarkable for the ruins of an old castle, on which the osprey builds her annual nest. Had Loch Lomond been in a happier climate, it would have been the boast of wealth and vanity to own one of the little spots which it encloses, and to have employed upon it all the arts of embellishment. But as it is, the islets, which court the gazer at a distance, disgust him at his approach, when he finds, instead of soft lawns and shady thickets, nothing more than uncultivated ruggedness.

A JOURNEY TO THE HEBRIDES

Where the loch discharges itself into a river called the Leven, we passed a night with Mr. Smollet, a relation of doctor Smollet, to whose memory he has raised an obelisk on the bank near the house in which he was born. The civility and respect which we found at every place, it is ungrateful to omit, and tedious to repeat. Here we were met by a post-chaise, that conveyed us to Glasgow.

To describe a city so much frequented as Glasgow, is unnecessary. The prosperity of its commerce appears by the greatness of many private houses, and a general appearance of wealth. It is the only episcopal city whose cathedral was left standing in the rage of reformation. It is now divided into many separate places of worship, which, taken all together, compose a great pile, that had been some centuries in building, but was never finished; for the change of religion intercepted its progress, before the cross aisle was added, which seems essential to a Gothick cathedral.

The college has not had a sufficient share of the increasing magnificence of the place. The session was begun; for it commences on the tenth of October, and continues to the tenth of June, but the students appeared not numerous, being, I suppose, not yet returned from their several houses. The division of the academical year into one session, and one recess, seems to me better accommodated to the present state of life, than that variegation of time by terms and vacations, derived from distant centuries, in which it was probably convenient, and still continued in the English universities. So many

A JOURNEY TO THE HEBRIDES

solid months as the Scotch scheme of education joins together, allow and encourage a plan for each part of the year; but with us, he that has settled himself to study in the college is soon tempted into the country, and he that has adjusted his life in the country is summoned back to his college.

Yet when I have allowed to the universities of Scotland a more rational distribution of time, I have given them, so far as my inquiries have informed me, all that they can claim. The students, for the most part, go thither boys, and depart before they are men; they carry with them little fundamental knowledge, and, therefore, the superstructure cannot be lofty. The grammar schools are not generally well supplied; for the character of a school-master being there less honourable than in England, is seldom accepted by men who are capable to adorn it, and where the school has been deficient, the college can effect little.

Men bred in the universities of Scotland cannot be expected to be often decorated with the splendours of ornamental erudition, but they obtain a mediocrity of knowledge, between learning and ignorance, not inadequate to the purposes of common life, which is, I believe, very widely diffused among them, and which, countenanced in general by a national combination, so invidious, that their friends cannot defend it, and actuated in particulars by a spirit of enterprise, so vigorous, that their enemies are constrained to praise it, enables them to find, or to make their way to employment, riches, and distinction.

A JOURNEY TO THE HEBRIDES

From Glasgow we directed our course to Auchinleck, an estate devolved, through a long series of ancestors, to Mr. Boswell's father, the present possessour. In our way we found several places remarkable enough in themselves, but already described by those who viewed them at more leisure, or with much more skill; and stopped two days at Mr. Campbell's, a gentleman married to Mr. Boswell's sister.

Auchinleck, which signifies a *stony field*, seems not now to have any particular claim to its denomination. It is a district generally level, and sufficiently fertile, but, like all the western side of Scotland, incommoded by very frequent rain. It was, with the rest of the country, generally naked, till the present possessour finding, by the growth of some stately trees near his old castle, that the ground was favourable enough to timber, adorned it very diligently with annual plantations.

Lord Auchinleck, who is one of the judges of Scotland, and, therefore, not wholly at leisure for domestick business or pleasure, has yet found time to make improvements in his patrimony. He has built a house of hewn stone, very stately and durable, and has advanced the value of his lands with great tenderness to his tenants.

I was, however, less delighted with the elegance of the modern mansion, than with the sullen dignity of the old castle. I clambered with Mr. Boswell among the ruins, which afford striking images of ancient life. It is, like other castles, built upon a point of rock, and was, I believe, anciently surrounded

A JOURNEY TO THE HEBRIDES

with a moat. There is another rock near it, to which the drawbridge, when it was let down, is said to have reached. Here, in the ages of tumult and rapine, the laird was surprised and killed by the neighbouring chief, who, perhaps, might have extinguished the family, had he not, in a few days, been seized and hanged, together with his sons, by Douglas, who came with his forces to the relief of Auchinleck.

At no great distance from the house runs a pleasing brook, by a red rock, out of which has been hewn a very agreeable and commodious summer-house, at less expense, as lord Auchinleck told me, than would have been required to build a room of the same dimensions. The rock seems to have no more dampness than any other wall. Such opportunities of variety it is judicious not to neglect.

We now returned to Edinburgh, where I passed some days with men of learning, whose names want no advancement from my commemoration, or with women of elegance, which, perhaps, disclaims a pedant's praise.

☞The conversation of the Scots grows every day less unpleasing to the English; their peculiarities wear fast away; their dialect is likely to become, in half a century, provincial and rustick, even to themselves. The great, the learned, the ambitious, and the vain, all cultivate the English phrase, and the English pronunciation, and in splendid companies Scotch is not much heard, except now and then from an old lady.

There is one subject of philosophical curiosity to

A JOURNEY TO THE HEBRIDES

be found in Edinburgh, which no other city has to show; a college of the deaf and dumb, who are taught to speak, to read, to write, and to practise arithmetick, by a gentleman, whose name is Braidwood. The number which attends him is, I think, about twelve, which he brings together into a little school, and instructs according to their several degrees of proficiency.

I do not mean to mention the instruction of the deaf as new. Having been first practised upon the son of a constable of Spain, it was afterwards cultivated with much emulation in England, by Wallis and Holder, and was lately professed by Mr. Baker, who once flattered me with hopes of seeing his method published. How far any former teachers have succeeded, it is not easy to know; the improvement of Mr. Braidwood's pupils is wonderful. They not only speak, write, and understand what is written, but if he that speaks looks towards them, and modifies his organs by distinct and full utterance, they know so well what is spoken, that it is an expression scarcely figurative to say they hear with the eye. That any have attained to the power mentioned by Burnet, of feeling sounds, by laying a hand on the speaker's mouth, I know not; but I have seen so much, that I can believe more; a single word, or a short sentence, I think, may possibly be so distinguished.

It will be readily supposed by those that consider this subject, that Mr. Braidwood's scholars spell accurately. Orthography is vitiated among such as learn first to speak, and then to write, by imperfect notions of the relation between letters and vocal utterance; but to those students every character is

A JOURNEY TO THE HEBRIDES

of equal importance; for letters are to them not symbols of names, but of things; when they write, they do not represent a sound, but delineate a form.

This school I visited, and found some of the scholars waiting for their master, whom they are said to receive, at his entrance, with smiling countenances and sparkling eyes, delighted with the hope of new ideas. One of the young ladies had her slate before her, on which I wrote a question consisting of three figures, to be multiplied by two figures. She looked upon it, and quivering her fingers in a manner which I thought very pretty, but of which I knew not whether it was art or play, multiplied the sum regularly in two lines, observing the decimal place; but did not add the two lines together, probably disdaining so easy an operation. I pointed at the place where the sum total should stand, and she noted it with such expedition as seemed to show that she had it only to write.

→ It was pleasing to see one of the most desperate of human calamities capable of so much help: whatever enlarges hope, will exalt courage; after having seen the deaf taught arithmetick, who would be afraid to cultivate the Hebrides?

→ Such are the things which this journey has given me an opportunity of seeing, and such are the reflections which that sight has raised. Having passed my time almost wholly in cities, I may have been surprised by modes of life and appearances of nature, that are familiar to men of wider survey and more varied conversation. Novelty and ignorance must always be reciprocal, and I cannot but be conscious that my thoughts on national manners, are the thoughts of one who has seen but little.

THE VISION OF THEODORE

THE HERMIT OF TENERIFFE

FOUND IN HIS CELL*

1

SON of Perseverance, whoever thou art, whose Curiosity has led thee hither, read and be wise. He that now calls upon thee is Theodore, the Hermit of Teneriffe, who, in the fifty-seventh year of his retreat, left this instruction to mankind, lest his solitary hours should be spent in vain.

I was once what thou art now, a groveller on the earth, and a gazer at the sky; I trafficked and heaped wealth together; I loved and was favoured, I wore the robe of honour and heard the musick of adulation; I was ambitious, and rose to greatness; I was unhappy, and retired. I sought for some time what I at length found here, a place where all real wants might be easily supplied, and where I might not be under the necessity of purchasing the assistance of men, by the toleration of their follies. Here I saw fruits, and herbs, and water, and here determined to wait the hand of death, which I hope, when at last it comes, will fall lightly upon me.

Forty-eight years had I now passed in forgetfulness of all mortal cares, and without any inclination to wander farther than the necessity of procuring sustenance required; but as I stood one day beholding the rock that overhangs my cell, I found in myself a desire to climb it; and when I was on its top, was, in the same manner, determined to scale the next, till, by degrees, I conceived a wish to view the summit of the mountain, at the foot of which I had so long resided. This motion of my thoughts

* Printed in the Preceptor, 1748.

THE VISION OF THEODORE

I endeavoured to suppress, not because it appeared criminal, but because it was new; and all change not evidently for the better, alarms a mind taught by experience to distrust itself. I was often afraid that my heart was deceiving me, that my impatience of confinement arose from some earthly passion, and that my ardour to survey the works of nature, was only a hidden longing to mingle once again in the scenes of life. I, therefore, endeavoured to settle my thoughts into their former state, but found their distraction every day greater. I was always reproaching myself with the want of happiness within my reach, and at last began to question whether it was not laziness rather than caution that restrained me from climbing to the summit of Teneriffe.

I rose, therefore, before the day, and began my journey up the steep of the mountain; but I had not advanced far, old as I was and burdened with provisions, when the day began to shine upon me; the declivities grew more precipitous, and the sand slid from beneath my feet: at last, fainting with labour, I arrived at a small plain almost enclosed by rocks, and open only to the east. I sat down to rest awhile, in full persuasion, that, when I had recovered my strength, I should proceed on my design; but when once I had tasted ease, I found many reasons against disturbing it. The branches spread a shade over my head, and the gales of spring wafted odours to my bosom.

As I sat thus, forming alternately excuses for delay, and resolutions to go forward, an irresistible

THE VISION OF THEODORE

heaviness suddenly surprised me; I laid my head upon the bank, and resigned myself to sleep; when methought I heard the sound as of the flight of eagles, and a being of more than human dignity stood before me. While I was deliberating how to address him, he took me by the hand with an air of kindness, and asked me solemnly, but without severity, "Theodore, whither art thou going?" "I am climbing," answered I, "to the top of the mountain, to enjoy a more extensive prospect of the works of nature." "Attend first," said he, "to the prospect which this place affords, and what thou dost not understand I will explain. I am one of the benevolent beings who watch over the children of the dust, to preserve them from those evils which will not ultimately terminate in good, and which they do not, by their own faults, bring upon themselves. Look round, therefore, without fear: observe, contemplate, and be instructed."

Encouraged by this assurance, I looked and beheld a mountain higher than Teneriffe, to the summit of which the human eye could never reach: when I had tired myself with gazing upon its height, I turned my eyes towards its foot, which I could easily discover, but was amazed to find it without foundation, and placed inconceivably in emptiness and darkness. Thus I stood terrified and confused; above were tracts inscrutable, and below was total vacuity. But my protector, with a voice of admonition, cried out, "Theodore, be not affrighted, but raise thy eyes again; the mountain of Existence is before thee, survey it and be wise."

THE VISION OF THEODORE

I then looked with more deliberate attention, and observed the bottom of the mountain to be of gentle rise, and overspread with flowers; the middle to be more steep, embarrassed with crags, and interrupted by precipices, over which hung branches loaded with fruits, and among which were scattered palaces and bowers. The tracts which my eye could reach nearest the top were generally barren; but there were among the clefts of the rocks a few hardy evergreens, which, though they did not give much pleasure to the sight or smell, yet seemed to cheer the labour, and facilitate the steps of those who were clambering among them.

Then, beginning to examine more minutely the different parts, I observed, at a great distance, a multitude of both sexes issuing into view from the bottom of the mountain. Their first actions I could not accurately discern; but, as they every moment approached nearer, I found that they amused themselves with gathering flowers under the superintendance of a modest virgin in a white robe, who seemed not over solicitous to confine them to any settled pace or certain track; for she knew that the whole ground was smooth and solid, and that they could not easily be hurt or bewildered. When, as it often happened, they plucked a thistle for a flower, Innocence, so was she called, would smile at the mistake. Happy, said I, are they who are under so gentle a government, and yet are safe. But I had no opportunity to dwell long on the consideration of their felicity; for I found that Innocence continued her attendance but a little way, and seemed to consider

THE VISION OF THEODORE

only the flowery bottom of the mountain as her proper province. Those whom she abandoned scarcely knew that they were left, before they perceived themselves in the hands of Education, a nymph more severe in her aspect, and imperious in her commands, who confined them to certain paths, in their opinion too narrow and too rough. These they were continually solicited to leave by Appetite, whom Education could never fright away, though she sometimes awed her to such timidity, that the effects of her presence were scarcely perceptible. Some went back to the first part of the mountain, and seemed desirous of continuing busied in plucking flowers, but were no longer guarded by Innocence; and such as Education could not force back, proceeded up the mountain by some miry road, in which they were seldom seen, and scarcely ever regarded.

As Education led her troop up the mountain, nothing was more observable than that she was frequently giving them cautions to beware of Habits; and was calling out to one or another, at every step, that a Habit was ensnaring them; that they would be under the dominion of Habit before they perceived their danger; and that those whom Habit should once subdue, had little hope of regaining their liberty.

Of this caution, so frequently repeated, I was very solicitous to know the reason, when my protector directed my regard to a troop of pygmies, which appeared to walk silently before those that were climbing the mountain, and each to smooth the way

THE VISION OF THEODORE

before her follower. I found that I had missed the notice of them before, both because they were so minute as not easily to be discerned, and because they grew every moment nearer in their colour to the objects, with which they were surrounded. As the followers of Education did not appear to be sensible of the presence of these dangerous associates, or, ridiculing their diminutive size, did not think it possible that human beings should ever be brought into subjection by such feeble enemies, they generally heard her precepts of vigilance with wonder: and, when they thought her eye withdrawn, treated them with contempt. Nor could I myself think her cautions so necessary as her frequent inculcations seemed to suppose, till I observed that each of these petty beings held secretly a chain in her hand, with which she prepared to bind those whom she found within her power. Yet these Habits under the eye of Education went quietly forward, and seemed very little to increase in bulk or strength; for though they were always willing to join with Appetite, yet when Education kept them apart from her, they would very punctually obey command, and make the narrow roads in which they were confined easier and smoother.

It was observable, that their stature was never at a stand, but continually growing or decreasing, yet not always in the same proportions: nor could I forbear to express my admiration, when I saw in how much less time they generally gained than lost bulk. Though they grew slowly in the road of Education, it might, however, be perceived that they

THE VISION OF THEODORE

grew; but if they once deviated at the call of Appetite, their stature soon became gigantick; and their strength was such, that Education pointed out to her tribe many that were led in chains by them, whom she could never more rescue from their slavery. She pointed them out, but with little effect; for all her pupils appeared confident of their own superiority to the strongest Habit, and some seemed in secret to regret, that they were hindered from following the triumph of Appetite.

It was the peculiar artifice of Habit, not to suffer her power to be felt at first. Those whom she led, she had the address of appearing only to attend, but was continually doubling her chains upon her companions; which were so slender in themselves, and so silently fastened, that while the attention was engaged by other objects, they were not easily perceived. Each link grew tighter as it had been longer worn; and when, by continual additions, they became so heavy as to be felt, they were very frequently too strong to be broken.

When Education had proceeded in this manner to the part of the mountain where the declivity began to grow craggy, she resigned her charge to two powers of superiour aspect. The meaner of them appeared capable of presiding in senates, or governing nations, and yet watched the steps of the other with the most anxious attention, and was visibly confounded and perplexed, if ever she suffered her regard to be drawn away. The other seemed to approve her submission as pleasing, but with such a condescension as plainly showed that she claimed

THE VISION OF THEODORE

it as due; and indeed, so great was her dignity and sweetness, that he who would not reverence, must not behold her.

“Theodore,” said my protector, “be fearless, and be wise; approach these powers, whose dominion extends to all the remaining part of the mountain of Existence.” I trembled, and ventured to address the inferiour nymph, whose eyes, though piercing and awful, I was not able to sustain. “Bright power,” said I, “by whatever name it is lawful to address thee, tell me, thou who presidest here, on what condition thy protection will be granted?” “It will be granted,” said she, “only to obedience. I am Reason, of all subordinate beings the noblest and the greatest; who, if thou wilt receive my laws, will reward thee, like the rest of my votaries, by conducting thee to Religion.” Charmed by her voice and aspect, I professed my readiness to follow her. She then presented me to her mistress, who looked upon me with tenderness. I bowed before her, and she smiled.

When Education delivered up those for whose happiness she had been so long solicitous, she seemed to expect that they should express some gratitude for her care, or some regret at the loss of that protection which she had hitherto afforded them. But it was easy to discover, by the alacrity which broke out at her departure, that her presence had been long displeasing, and that she had been teaching those, who felt in themselves no want of instruction. They all agreed in rejoicing that they should no longer be subject to her caprices, or disturbed

THE VISION OF THEODORE

by her documents, but should be now under the direction only of Reason, to whom they made no doubt of being able to recommend themselves, by a steady adherence to all her precepts. Reason counselled them, at their first entrance upon her province, to enlist themselves among the votaries of Religion; and informed them, that if they trusted to her alone, they would find the same fate with her other admirers, whom she had not been able to secure against Appetites and Passions, and who, having been seized by Habits in the regions of Desire, had been dragged away to the caverns of Despair. Her admonition was vain, the greater number declared against any other direction, and doubted not, but by her superintendency, they should climb with safety up the mountain of Existence. "My power," said Reason, "is to advise, not to compel; I have already told you the danger of your choice. The path seems now plain and even, but there are asperities and pitfalls, over which Religion only can conduct you. Look upwards, and you perceive a mist before you, settled upon the highest visible part of the mountain; a mist by which my prospect is terminated, and which is pierced only by the eyes of Religion. Beyond it are the temples of Happiness, in which those who climb the precipice by her direction, after the toil of their pilgrimage, repose for ever. I know not the way, and, therefore, can only conduct you to a better guide. Pride has sometimes reproached me with the narrowness of my view, but, when she endeavoured to extend it, could only show me, below the mist, the bowers of Con-

THE VISION OF THEODORE

tent; even they vanished, as I fixed my eyes upon them; and those whom she persuaded to travel towards them, were enchained by Habits, and engulfed by Despair, a cruel tyrant, whose caverns are beyond the darkness on the right side and on the left, from whose prisons none can escape, and whom I cannot teach you to avoid.”

Such was the declaration of Reason to those who demanded her protection. Some that recollected the dictates of Education, finding them now seconded by another authority, submitted with reluctance to the strict decree, and engaged themselves among the followers of Religion, who were distinguished by the uniformity of their march, though many of them were women, and by their continual endeavours to move upwards, without appearing to regard the prospects which, at every step, courted their attention.

All those who determined to follow either Reason or Religion, were continually importuned to forsake the road, sometimes by Passions, and sometimes by Appetites, of whom both had reason to boast the success of their artifices; for so many were drawn into by-paths, that any way was more populous than the right. The attacks of the Appetites were more impetuous; those of the Passions longer continued. The Appetites turned their followers directly from the true way; but the Passions marched at first in a path nearly in the same direction with that of Reason and Religion, but deviated by slow degrees, till at last they entirely changed their course. Appetite drew aside the dull, and Passion the

THE VISION OF THEODORE

sprightly. Of the Appetites, Lust was the strongest; and of the Passions, Vanity. The most powerful assault was to be feared, when a Passion and an Appetite joined their enticements; and the path of Reason was best followed, when a Passion called to one side, and an Appetite to the other.

These seducers had the greatest success upon the followers of Reason, over whom they scarcely ever failed to prevail, except when they counteracted one another. They had not the same triumphs over the votaries of Religion; for though they were often led aside for a time, Religion commonly recalled them by her emissary Conscience, before Habit had time to enchain them. But they that professed to obey Reason, if once they forsook her, seldom returned; for she had no messenger to summon them but Pride, who generally betrayed her confidence, and employed all her skill to support Passion; and if ever she did her duty, was found unable to prevail, if Habit had interposed.

I soon found that the great danger to the followers of Religion was only from Habit; every other power was easily resisted, nor did they find any difficulty, when they inadvertently quitted her, to find her again by the direction of Conscience, unless they had given time to Habit to draw her chain behind them, and bar up the way by which they had wandered. Of some of those, the condition was justly to be pitied, who turned at every call of Conscience, and tried, but without effect, to burst the chains of Habit; saw Religion walking forward at a distance, saw her with reverence, and longed to

THE VISION OF THEODORE

join her; but were, whenever they approached her, withheld by Habit, and languished in sordid bondage, which they could not escape, though they scorned and hated it.

It was evident, that the Habits were so far from growing weaker by these repeated contests, that, if they were not totally overcome, every struggle enlarged their bulk, and increased their strength; and a Habit opposed and victorious, was more than twice as strong as before the contest. The manner in which those who were weary of their tyranny, endeavoured to escape from them, appeared by the event, to be generally wrong; they tried to loose their chains one by one, and to retreat by the same degrees as they advanced; but before the deliverance was completed, Habit always threw new chains upon her fugitive; nor did any escape her but those, who, by an effort sudden and violent, burst their shackles at once, and left her at a distance; and even of these, many rushing too precipitately forward, and hindered by their terrors from stopping where they were safe, were fatigued with their own vehemence, and resigned themselves again to that power from whom an escape must be so dearly bought, and whose tyranny was little felt, except when it was resisted.

Some, however, there always were, who, when they found Habit prevailing over them, called upon Reason or Religion for assistance; each of them willingly came to the succour of her suppliant, but neither with the same strength, nor the same success. Habit, insolent with her power, would often

THE VISION OF THEODORE

presume to parley with Reason, and offer to loose some of her chains, if the rest might remain. To this, Reason, who was never certain of victory, frequently consented, but always found her concession destructive, and saw the captive led away by Habit to his former slavery. Religion never submitted to treaty, but held out her hand with certainty of conquest; and if the captive to whom she gave it did not quit his hold, always led him away in triumph, and placed him in the direct path to the Temple of Happiness, where Reason never failed to congratulate his deliverance, and encourage his adherence to that power to whose timely succour he was indebted for it.

When the traveller was again placed in the road of Happiness, I saw Habit again gliding before him, but reduced to the stature of a dwarf, without strength and without activity; but when the Passions or Appetites, which had before seduced him, made their approach, Habit would on a sudden start into size, and with unexpected violence push him towards them. The wretch, thus impelled on one side, and allured on the other, too frequently quitted the road of Happiness, to which, after his second deviation from it, he rarely returned: but, by a timely call upon Religion, the force of Habit was eluded, her attacks grew fainter, and at last her correspondence with the enemy was entirely destroyed. She then began to employ those restless faculties in compliance with the power which she could not overcome; and as she grew again in

THE VISION OF THEODORE

stature and in strength, cleared away the asperities of the road to Happiness.

From this road I could not easily withdraw my attention, because all who travelled it appeared cheerful and satisfied; and the farther they proceeded, the greater appeared their alacrity, and the stronger their conviction of the wisdom of their guide. Some who had never deviated but by short excursions, had Habit in the middle of their passage vigorously supporting them, and driving off their Appetites and Passions which attempted to interrupt their progress. Others, who had entered this road late, or had long forsaken it, were toiling on without her help at least, and commonly against her endeavours. But I observed, when they approached to the barren top, that few were able to proceed without some support from Habit: and that they, whose Habits were strong, advanced towards the mists with little emotion, and entered them at last with calmness and confidence; after which, they were seen only by the eye of Religion; and though Reason looked after them with the most earnest curiosity, she could only obtain a faint glimpse, when her mistress, to enlarge her prospect, raised her from the ground. Reason, however, discerned that they were safe, but Religion saw that they were happy.

“Now, Theodore,” said my protector, “withdraw thy view from the regions of obscurity, and see the fate of those who, when they were dismissed by Education, would admit no direction but that of Reason. Survey their wanderings, and be wise.”

THE VISION OF THEODORE

I looked then upon the road of Reason, which was, indeed, so far as it reached, the same with that of Religion, nor had Reason discovered it but by her instruction. Yet when she had once been taught it, she clearly saw that it was right; and Pride had sometimes incited her to declare that she discovered it herself, and persuaded her to offer herself as a guide to Religion, whom, after many vain experiments, she found it her highest privilege to follow. Reason was, however, at last well instructed in part of the way, and appeared to teach it with some success, when her precepts were not misrepresented by Passion, or her influence overborne by Appetite. But neither of these enemies was she able to resist. When Passion seized upon her votaries, she seldom attempted opposition: she seemed, indeed, to contend with more vigour against Appetite, but was generally overwearied in the contest; and if either of her opponents had confederated with Habit, her authority was wholly at an end. When Habit endeavoured to captivate the votaries of Religion, she grew by slow degrees, and gave time to escape; but in seizing the unhappy followers of Reason, she proceeded as one that had nothing to fear, and enlarged her size, and doubled her chains without intermission, and without reserve.

Of those who forsook the directions of Reason, some were led aside by the whispers of Ambition, who was perpetually pointing to stately palaces, situated on eminences on either side, recounting the delights of affluence, and boasting the security of power. They were easily persuaded to follow her,

THE VISION OF THEODORE

and Habit quickly threw her chains upon them; they were soon convinced of the folly of their choice, but few of them attempted to return. Ambition led them forward from precipice to precipice, where many fell and were seen no more. Those that escaped were, after a long series of hazards, generally delivered over to Avarice, and enlisted by her into the service of Tyranny, where they continued to heap up gold till their patrons or their heirs pushed them headlong at last into the caverns of Despair.

Others were enticed by Intemperance to ramble in search of those fruits which hung over the rocks, and filled the air with their fragrance. I observed, that the Habits which hovered about these soon grew to an enormous size, nor were there any who less attempted to return to Reason, or sooner sunk into the gulfs that lay before them. When these first quitted the road, Reason looked after them with a frown of contempt, but had little expectations of being able to reclaim them; for the bowl of intoxication was of such qualities as to make them lose all regard but for the present moment; neither Hope nor Fear could enter their retreats; and Habit had so absolute a power, that even Conscience, if Religion had employed her in their favour, would not have been able to force an entrance.

There were others whose crime it was rather to neglect Reason than to disobey her; and who retreated from the heat and tumult of the way, not to the bowers of Intemperance, but to the maze of Indolence. They had this peculiarity in their condition, that they were always in sight of the road

THE VISION OF THEODORE

of Reason, always wishing for her presence, and always resolving to return to-morrow. In these was most eminently conspicuous the subtlety of Habit, who hung imperceptible shackles upon them, and was every moment leading them farther from the road, which they always imagined that they had the power of reaching. They wandered on from one double of the labyrinth to another with the chains of Habit hanging secretly upon them, till, as they advanced, the flowers grew paler, and the scents fainter; they proceeded in their dreary march without pleasure in their progress, yet without power to return; and had this aggravation above all others, that they were criminal but not delighted. The drunkard for a time laughed over his wine; the ambitious man triumphed in the miscarriage of his rival; but the captives of Indolence had neither superiority nor merriment. Discontent lowered in their looks, and sadness hovered round their shades; yet they crawled on reluctant and gloomy, till they arrived at the depth of the recess, varied only with poppies and nightshade, where the dominion of Indolence terminates, and the hopeless wanderer is delivered up to Melancholy; the chains of Habit are rivetted for ever; and Melancholy, having tortured her prisoner for a time, consigns him at last to the cruelty of Despair.

While I was musing on this miserable scene, my protector called out to me, "Remember, Theodore, and be wise, and let not Habit prevail against thee." I started and beheld myself surrounded by the rocks of Teneriffe: the birds of light were singing in the trees, and the glances of the morning darted upon me.

THE FOUNTAINS

A FAIRY TALE*

*Felix qui potuit boni
Fontem visere lucidum.*

BOETHIUS.

AS Floretta was wandering in a meadow at the foot of Plinlimmon, she heard a little bird cry in such a note as she had never observed before, and looking round her, saw a lovely goldfinch entangled by a lime-twigg, and a hawk hovering over him, as at the point of seizing him in his talons.

Floretta longed to rescue the little bird, but was afraid to encounter the hawk, who looked fiercely upon her without any apparent dread of her approach, and as she advanced seemed to increase in bulk, and clapped his wings in token of defiance. Floretta stood deliberating a few moments, but, seeing her mother at no great distance, took courage, and snatched the twig with the little bird upon it. When she had disengaged him, she put him in her bosom, and the hawk flew away.

Floretta, showing her bird to her mother, told her from what danger she had rescued him; her mother, after admiring his beauty, said, that he would be a very proper inhabitant of the little gilded cage, which had hung empty, since the starling died for want of water, and that he should be placed at the chamber window, for it would be wonderfully pleasant to hear him in the morning.

Floretta, with tears in her eyes, replied that he had better have been devoured by the hawk than die for want of water, and that she would not save him from a less evil to put him in danger of a

* From Miscellanies in Prose and Verse. By Anna Williams. 1766, 4to.

THE FOUNTAINS

greater: she, therefore, took him into her hand, cleaned his feathers from the birdlime, looked upon him with great tenderness, and, having put his bill to her lips, dismissed him into the air.

He flew in circles round her as she went home, and, perching on a tree before the door, delighted them awhile with such sweetness of song, that her mother reproved her for not putting him in the cage. Floretta endeavoured to look grave, but silently approved her own act, and wished her mother more generosity. Her mother guessed her thoughts, and told her, that when she was older she would be wiser.

Floretta, however, did not repent, but hoped to hear her little bird the next morning singing at liberty. She waked early and listened, but no goldfinch could she hear. She rose, and walking again in the same meadow, went to view the bush where she had seen the lime twig the day before.

When she entered the thicket, and was near the place for which she was looking, from behind a blossoming hawthorn advanced a female form of very low stature, but of elegant proportion and majestick air, arrayed in all the colors of the meadow, and sparkling as she moved like a dew-drop in the sun.

Floretta was too much disordered to speak or fly, and stood motionless between fear and pleasure, when the little lady took her by the hand.

“I am,” said she, “one of that order of beings which some called Fairies, and some Piskies: we have always been known to inhabit the crags and

THE FOUNTAINS

caverns of Plinlimmon. The maids and shepherds when they wander by moonlight, have often heard our musick, and sometimes seen our dances.

“I am the chief of the fairies of this region, and am known among them by the name of lady Lilinet of the Blue Rock. As I lived always in my own mountain, I had very little knowledge of human manners, and thought better of mankind than other fairies found them to deserve; I, therefore, often opposed the mischievous practices of my sisters, without always inquiring whether they were just. I extinguished the light that was kindled to lead a traveller into a marsh, and found afterwards that he was hasting to corrupt a virgin: I dissipated a mist which assumed the form of a town, and was raised to decoy a monopolizer of corn from his way to the next market: I removed a thorn, artfully planted to prick the foot of a churl, that was going to hinder the poor from following his reapers; and defeated so many schemes of obstruction and punishment, that I was cited before the queen as one who favoured wickedness, and opposed the execution of fairy justice.

“Having never been accustomed to suffer control, and thinking myself disgraced by the necessity of defence, I so much irritated the queen by my sullenness and petulance, that in her anger she transformed me into a goldfinch. ‘In this form,’ says she, ‘I doom thee to remain till some human being shall show thee kindness without any prospect of interest.’

“I flew out of her presence not much dejected; for I did not doubt but every reasonable being must

THE FOUNTAINS

love that which, having never offended, could not be hated, and having no power to hurt, could not be feared.

“ I, therefore, fluttered about the villages, and endeavoured to force myself into notice.

“ Having heard that nature was least corrupted among those who had no acquaintance with elegance and splendour, I employed myself for five years in hopping before the doors of cottages, and often sat singing on the thatched roof: my motions were seldom seen, or my notes heard, no kindness was ever excited, and all the reward of officiousness was to be aimed at with a stone when I stood within a throw.

“ The stones never hurt me, for I had still the power of a fairy.

“ I then betook myself to spacious and magnificent habitations, and sung in bowers by the walks or on the banks of fountains.

“ In these places, where novelty was recommended by satiety, and curiosity excited by leisure, my form and my voice were soon distinguished, and I was known by the name of the pretty goldfinch; the inhabitants would walk out to listen to my musick, and at last it was their practice to court my visits by scattering meat in my common haunts.

“ This was repeated till I went about pecking in full security, and expected to regain my original form, when I observed two of my most liberal benefactors silently advancing with a net behind me. I flew off, and fluttering beside them pricked the leg of each, and left them halting and groaning with the cramp.

THE FOUNTAINS

“I then went to another house, where, for two springs and summers I entertained a splendid family with such melody as they had never heard in the woods before. The winter that followed the second summer was remarkably cold, and many little birds perished in the field. I laid myself in the way of one of the ladies, as benumbed with cold and faint with hunger; she picked me up with great joy, telling her companions that she had found the goldfinch that sung so finely all the summer in the myrtle hedge, that she would lay him where he should die, for she could not bear to kill him, and would then pick his fine feathers very carefully, and stick them in her muff.

“Finding that her fondness and her gratitude could give way to so slight an interest, I chilled her fingers that she could not hold me, then flew at her face, and with my beak gave her nose four pecks, that left four black spots indelible behind them, and broke a match, by which she would have obtained the finest equipage in the country.

“At length the queen repented of her sentence, and being unable to revoke it, assisted me to try experiments upon man, to excite his tenderness, and attract his regard.

“We made many attempts, in which we were always disappointed. At last she placed me in your way held by a lime-twigg, and herself, in the shape of a hawk, made the show of devouring me. You, my dear, have rescued me from the seeming danger without desiring to detain me in captivity, or seek-

THE FOUNTAINS

ing any other recompense than the pleasure of benefiting a feeling creature.

“The queen is so much pleased with your kindness, that I am come by her permission, to reward you with a greater favour than ever fairy bestowed before.

“The former gifts of fairies, though bounties in design, have proved commonly mischiefs in the event. We have granted mortals to wish according to their own discretion, and their discretion being small, and their wishes irreversible, they have rashly petitioned for their own destruction. But you, my dearest Floretta, shall have, what none have ever before obtained from us, the power of indulging your wish, and the liberty of retracting it. Be bold, and follow me.”

Floretta was easily persuaded to accompany the fairy, who led her through a labyrinth of crags and shrubs, to a cavern covered by a thicket on the side of the mountain.

“This cavern,” said she, “is the court of Lilinet your friend; in this place you shall find a certain remedy for all real evils.” Lilinet then went before her through a long subterraneous passage, where she saw many beautiful fairies, who came to gaze at the stranger, but who, from reverence to their mistress, gave her no disturbance. She heard from remote corners of the gloomy cavern the roar of winds and the fall of waters, and more than once entreated to return; but Lilinet, assuring her that she was safe, persuaded her to proceed till they came to an

THE FOUNTAINS

arch, into which the light found its way through a fissure of the rock.

There Lilinet seated herself and her guest upon a bench of agate, and pointing to two fountains that bubbled before them, said: "Now attend, my dear Floretta, and enjoy the gratitude of a fairy. Observe the two fountains that spring up in the middle of the vault, one into a basin of alabaster, and the other into a basin of dark flint. The one is called the spring of joy, the other of sorrow; they rise from distant veins in the rock, and burst out in two places, but after a short course unite their streams, and run ever after in one mingled current.

"By drinking of these fountains, which, though shut up from all other human beings, shall be always accessible to you, it will be in your power to regulate your future life.

"When you are drinking the water of joy from the alabaster fountain, you may form your wish, and it shall be granted. As you raise your wish higher, the water will be sweeter and sweeter to the taste; but beware that you are not tempted by its increasing sweetness to repeat your draughts, for the ill effects of your wish can only be removed by drinking the spring of sorrow from the basin of flint, which will be bitter, in the same proportion as the water of joy was sweet. Now, my Floretta, make the experiment, and give me the first proof of moderate desires. Take the golden cup that stands on the margin of the spring of joy, form your wish, and drink."

Floretta wanted no time to deliberate on the

THE FOUNTAINS

subject of her wish; her first desire was the increase of her beauty. She had some disproportion of features. She took the cup, and wished to be agreeable; the water was sweet, and she drank copiously; and in the fountain, which was clearer than crystal, she saw that her face was completely regular.

She then filled the cup again, and wished for a rosy bloom upon her cheeks: the water was sweeter than before, and the colour of her cheeks was heightened.

She next wished for a sparkling eye; the water grew yet more pleasant, and her glances were like the beams of the sun.

She could not yet stop; she drank again, desired to be made a perfect beauty, and a perfect beauty she became.

She had now whatever her heart could wish; and making an humble reverence to Lilinet, requested to be restored to her own habitation. They went back, and the fairies in the way wondered at the change of Floretta's form. She came home delighted to her mother, who, on seeing the improvement, was yet more delighted than herself.

Her mother from that time pushed her forward into publick view: Floretta was at all the resorts of idleness and assemblies of pleasure; she was fatigued with balls, she was cloyed with treats, she was exhausted by the necessity of returning compliments. This life delighted her awhile, but custom soon destroyed its pleasure. She found that the men who courted her to-day, resigned her on the morrow to other flatterers, and that the women attacked her

THE FOUNTAINS

reputation by whispers and calumnies, till, without knowing how she had offended, she was shunned as infamous.

She knew that her reputation was destroyed by the envy of her beauty, and resolved to degrade herself from the dangerous preeminence. She went to the bush where she rescued the bird, and called for lady Lilinet. Immediately Lilinet appeared, and discovered by Floretta's dejected look, that she had drunk too much from the alabaster fountain.

"Follow me," she cried, "my Floretta, and be wiser for the future."

They went to the fountains, and Floretta began to taste of the waters of sorrow, which were so bitter that she withdrew more than once the cup from her mouth: at last she resolutely drank away the perfection of beauty, the sparkling eye, and rosy bloom, and left herself only agreeable.

She lived for some time with great content; but content is seldom lasting. She had a desire, in a short time, again to taste the waters of joy: she called for the conduct of Lilinet, and was led to the alabaster fountain, where she drank, and wished for a faithful lover.

After her return she was soon addressed by a young man, whom she thought worthy of her affection. He courted, and flattered, and promised; till at last she yielded up her heart. He then applied to her parents; and, finding her fortune less than he expected, contrived a quarrel, and deserted her.

Exasperated by her disappointment, she went in quest of Lilinet, and expostulated with her for the

THE FOUNTAINS

deceit which she had practised. Lilinet asked her, with a smile, for what she had been wishing; and being told, made her this reply. "You are not, my dear, to wonder or complain: you may wish for yourself, but your wishes can have no effect upon another. You may become lovely by the efficacy of the fountain, but that you shall be loved is by no means a certain consequence; for you cannot confer upon another either discernment or fidelity; that happiness which you must derive from others, it is not in my power to regulate or bestow."

Floretta was, for some time, so dejected by this limitation of the fountain's power, that she thought it unworthy of another visit; but, being on some occasion thwarted by her mother's authority, she went to Lilinet, and drank at the alabaster fountain for a spirit to do her own way.

Lilinet saw that she drank immoderately, and admonished her of her danger; but *spirit* and *her own way* gave such sweetness to the water, that she could not prevail upon herself to forbear, till Lilinet, in pure compassion, snatched the cup out of her hand.

When she came home every thought was contempt, and every action was rebellion: she had drunk into herself a spirit to resist, but could not give her mother a disposition to yield; the old lady asserted her right to govern; and, though she was often foiled by the impetuosity of her daughter, she supplied by pertinacity what she wanted in violence; so that the house was in a continual tumult by the pranks of the daughter and opposition of the mother.

THE FOUNTAINS

In time, Floretta was convinced that spirit had only made her a capricious termagant, and that her own ways ended in error, perplexity, and disgrace; she perceived that the vehemence of mind, which to a man may sometimes procure awe and obedience, produce to a woman nothing but detestation; she, therefore, went back, and by a large draught from the flinty fountain, though the water was very bitter, replaced herself under her mother's care, and quitted her spirit and her own way.

Floretta's fortune was moderate, and her desires were not larger, till her mother took her to spend a summer at one of the places which wealth and idleness frequent, under pretence of drinking the waters. She was now no longer a perfect beauty, and, therefore, conversation in her presence took its course as in other company, opinions were freely told, and observations made without reserve. Here Floretta first learned the importance of money. When she saw a woman of mean air and empty talk draw the attention of the place, she always discovered upon inquiry that she had so many thousands to her fortune.

She soon perceived that where these golden goddesses appeared, neither birth nor elegance, nor civility had any power of attraction, and every art of entertainment was devoted to them, and that the great and the wise courted their regard.

The desire after wealth was raised yet higher by her mother, who was always telling her how much neglect she suffered for want of fortune, and what distinctions, if she had but a fortune, her good

THE FOUNTAINS

qualities would obtain. Her narrative of the day was always, that Floretta walked in the morning, but was not spoken to because she had a small fortune, and that Floretta danced at the ball better than any of them, but nobody minded her for want of a fortune.

This want, in which all other wants appeared to be included, Floretta was resolved to endure no longer, and came home flattering her imagination in secret with the riches which she was now about to obtain.

On the day after her return she walked out alone to meet lady Lilinet, and went with her to the fountain: riches did not taste so sweet as either beauty or spirit, and, therefore, she was not immoderate in her draught.

When they returned from the cavern, Lilinet gave her wand to a fairy that attended her, with an order to conduct Floretta to the Black Rock.

The way was not long, and they soon came to the mouth of a mine in which there was a hidden treasure, guarded by an earthy fairy deformed and shaggy, who opposed the entrance of Floretta till he recognised the wand of the lady of the mountain. Here Floretta saw vast heaps of gold, and silver, and gems, gathered and repositied in former ages, and entrusted to the guard of the fairies of the earth. The little fairy delivered the orders of her mistress, and the surly sentinel promised to obey them.

Floretta, wearied with her walk, and pleased with her success, went home to rest, and when she

THE FOUNTAINS

waked in the morning, first opened her eyes upon a cabinet of jewels, and looking into her drawers and boxes, found them filled with gold.

Floretta was now as fine as the finest. She was the first to adopt any expensive fashion, to subscribe to any pompous entertainment, to encourage any foreign artist, or engage in any frolick of which the cost was to make the pleasure.

She was, on a sudden, the favourite of every place. Report made her wealth thrice greater than it really was, and wherever she came, all was attention, reverence and obedience. The ladies who had formerly slighted her, or by whom she had been formerly caressed, gratified her pride by open flattery and private murmurs. She sometimes overheard them railing at upstarts, and wondering whence some people came, or how their expenses were supplied. This incited her to heighten the splendour of her dress, to increase the number of her retinue, and to make such propositions of costly schemes, that her rivals were forced to desist from the contest.

But she now began to find that the tricks which can be played with money will seldom bear to be repeated, that admiration is a short-lived passion, and that the pleasure of expense is gone when wonder and envy are no more excited. She found that respect was an empty form, and that all those who crowded round her were drawn to her by vanity or interest.

It was, however, pleasant to be able, on any terms, to elevate and to mortify, to raise hopes and fears: and she would still have continued to be rich, had

THE FOUNTAINS

not the ambition of her mother contrived to marry her to a lord, whom she despised as ignorant, and abhorred as profligate. Her mother persisted in her importunity; and Floretta having now lost the spirit of resistance, had no other refuge than to divest herself of her fairy fortune.

She implored the assistance of Lilinet, who praised her resolution. She drank cheerfully from the flinty fountain, and found the waters not extremely bitter. When she returned she went to bed, and in the morning perceived that all her riches had been conveyed away she knew not how, except a few ornamental jewels, which Lilinet had ordered to be carried back, as a reward for her dignity of mind.

She was now almost weary of visiting the fountain, and solaced herself with such amusements as every day happened to produce: at last there arose in her imagination a strong desire to become a wit.

The pleasures with which this new character appeared to teem were so numerous and so great, that she was impatient to enjoy them, and, rising before the sun, hastened to the place where she knew that her fairy patroness was always to be found. Lilinet was willing to conduct her, but could now scarcely restrain her from leading the way but by telling her, that, if she went first, the fairies of the cavern would refuse her passage.

They came in time to the fountain, and Floretta took the golden cup into her hand; she filled it and drank, and again she filled it, for wit was sweeter than riches, spirit, or beauty.

As she returned she felt new successions of im-

THE FOUNTAINS

agery rise in her mind, and whatever her memory offered to her imagination, assumed a new form, and connected itself with things to which it seemed before to have no relation. All the appearances about her were changed, but the novelties exhibited were commonly defects. She now saw that almost every thing was wrong, without often seeing how it could be better; and frequently imputed to the imperfection of art those failures which were caused by the limitation of nature.

Wherever she went, she breathed nothing but censure and reformation. If she visited her friends, she quarrelled with the situation of their houses, the disposition of their gardens, the direction of their walks, and the termination of their views. It was vain to show her fine furniture, for she was always ready to tell how it might be finer, or to conduct her through spacious apartments, for her thoughts were full of nobler fabricks, of airy palaces, and Hesperian gardens. She admired nothing, and praised but little.

Her conversation was generally thought uncivil. If she received flatteries, she seldom repaid them: for she set no value upon vulgar praise. She could not hear a long story without hurrying the speaker on to the conclusion; and obstructed the mirth of her companions, for she rarely took notice of a good jest, and never laughed except when she was delighted.

This behaviour made her unwelcome wherever she went; nor did her speculation upon human manners much contribute to forward her reception.

THE FOUNTAINS

She now saw the disproportions between language and sentiment, between passion and exclamation; she discovered the defects of every action, and the uncertainty of every conclusion; she knew the malignity of friendship, the avarice of liberality, the anxiety of content, and the cowardice of temerity.

To see all this was pleasant, but the greatest of all pleasures was to show it. To laugh was something, but it was much more to make others laugh. As every deformity of character made a strong impression upon her, she could not always forbear to transmit it to others; as she hated false appearances, she thought it her duty to detect them, till, between wantonness and virtue, scarce any that she knew escaped without some wounds by the shafts of ridicule; not that her merriment was always the consequence of total contempt, for she often honoured virtue, where she laughed at affectation.

For these practices, and who can wonder? the cry was raised against her from every quarter, and to hunt her down, was generally determined. Every eye was watching for a fault, and every tongue was busy to supply its share of defamation. With the most unpolluted purity of mind, she was censured as too free of favours, because she was not afraid to talk with men: with generous sensibility of every human excellence, she was thought cold or envious, because she could not scatter praise with undistinguished profusion: with tenderness, that agonized at real misery, she was charged with delight in the pain of others, when she would not con-

THE FOUNTAINS

dole with those whom she knew to counterfeit affliction. She derided false appearances of kindness and of pity, and was, therefore, avoided as an enemy to society. As she seldom commended or censured, but with some limitations and exceptions, the world condemned her as indifferent to the good and bad; and because she was often doubtful, where others were confident, she was charged with laxity of principles, while her days were distracted, and her rest broken, by niceties of honour, and scruples of morality.

Report had now made her so formidable, that all flattered, and all shunned her. If a lover gave a ball to his mistress and her friends, it was stipulated, that Floretta should not be invited. If she entered a public room, the ladies curtsied, and shrunk away, for there was no such thing as speaking, but Floretta would find something to criticise. If a girl was more sprightly than her aunt, she was threatened, that in a little time she would be like Floretta. Visits were very diligently paid, when Floretta was known not to be at home; and no mother trusted her daughter to herself, without a caution, if she should meet Floretta, to leave the company as soon as she could.

With all this Floretta made sport at first, but in time grew weary of general hostility. She would have been content with a few friends, but no friendship was durable; it was the fashion to desert her, and with the fashion what fidelity will contend? She could have easily amused herself in solitude, but that she thought it mean to quit the field to treachery and folly.

THE FOUNTAINS

Persecution at length tired her constancy, and she implored Lilinet to rid her of her wit: Lilinet complied, and walked up the mountain, but was often forced to stop, and wait for her follower. When they came to the flinty fountain, Floretta filled a small cup, and slowly brought it to her lips, but the water was insupportably bitter. She just tasted it, and dashed it to the ground, diluted the bitterness at the fountain of alabaster, and resolved to keep her wit, with all its consequences.

Being now a wit for life, she surveyed the various conditions of mankind with such superiority of sentiment, that she found few distinctions to be envied or desired, and, therefore, did not very soon make another visit to the fountain. At length, being alarmed by sickness, she resolved to drink length of life from the golden cup. She returned, elated and secure, for though the longevity acquired was indeterminate, she considered death as far distant, and, therefore, suffered it not to intrude upon her pleasures.

But length of life included not perpetual health. She felt herself continually decaying, and saw the world fading about her. The delights of her early days would delight no longer, and however widely she extended her view, no new pleasure could be found; her friends, her enemies, her admirers, her rivals, dropped one by one into the grave, and with those who succeeded them, she had neither community of joys, nor strife of competition.

By this time she began to doubt whether old age were not dangerous to virtue; whether pain would

THE FOUNTAINS

not produce peevishness, and peevishness impair benevolence. She thought that the spectacle of life might be too long continued, and the vices which were often seen, might raise less abhorrence; that resolution might be sapped by time, and let that virtue sink, which in its firmest state it had not, without difficulty, supported; and that it was vain to delay the hour which must come at last, and might come at a time of less preparation, and greater imbecility.

These thoughts led her to Lilinet, whom she accompanied to the flinty fountain; where, after a short combat with herself, she drank the bitter water. They walked back to the favourite bush, pensive and silent: "And now," said she, "accept my thanks for the last benefit that Floretta can receive." Lady Lilinet dropped a tear, impressed upon her lips the final kiss, and resigned her, as she resigned herself, to the course of nature.
